FACTORY AUTOMATION

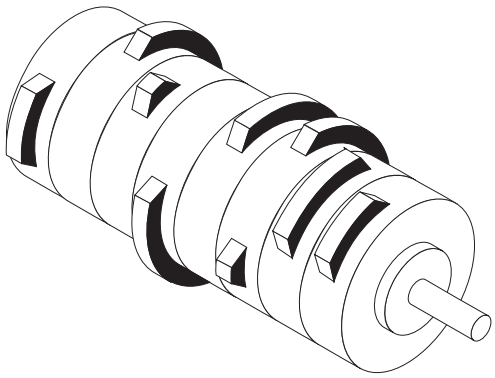
MANUAL

ABSOLUTE ENCODER AND CAM SWITCH FC-21-V

EDITION '99

PEPPERL+FUCHS

Programmable cam switch FC-21-V



The programmable cam switch FC-21-V corresponds to a mechanical cam switch with 24 cam circuits. 180 (256, 360, 512) cams are possible on each of these circuits.

Every cam circuit corresponds to a cam output port at the main unit FC-21-V. If a cam is placed, then the applied voltage is +24V, if no cam is placed, then the applied voltage is 0 V.

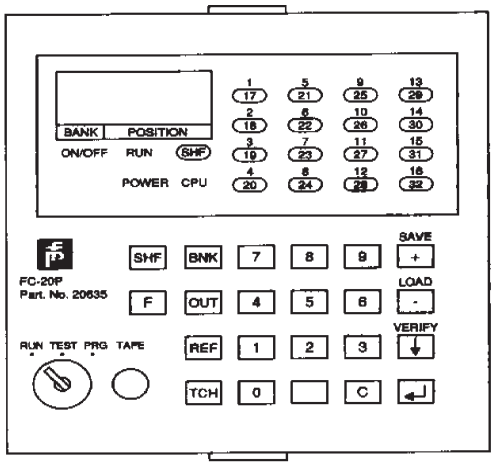
The position of the machine to be controlled is given by an absolute encoder.

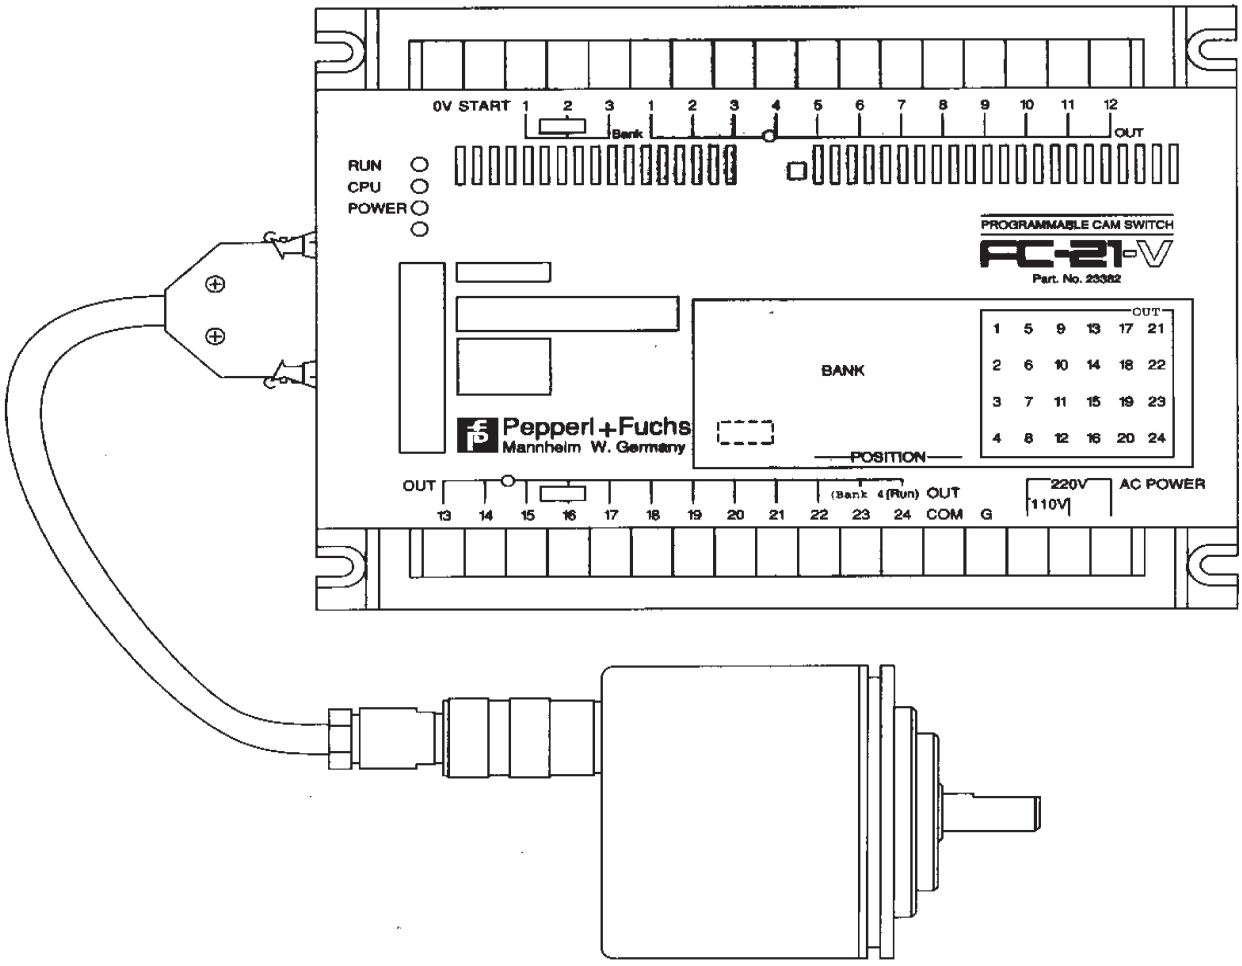
Depending on the type of the used absolute encoder 360, 512, 720 or 1024 positions may be solvable.

Start and end of a cam must be programmed with the programmer FC-20P. The programming of up to 24 cam circuits with up to 512 cams represents a pattern. For distinction all pattern are numbered.

Up to 10 pattern may be stored (in an EEPROM) in the main unit FC-21-V. External storage of pattern is possible with a cassette data recorder and commercial cassettes.

Date of issue 03.02.1997



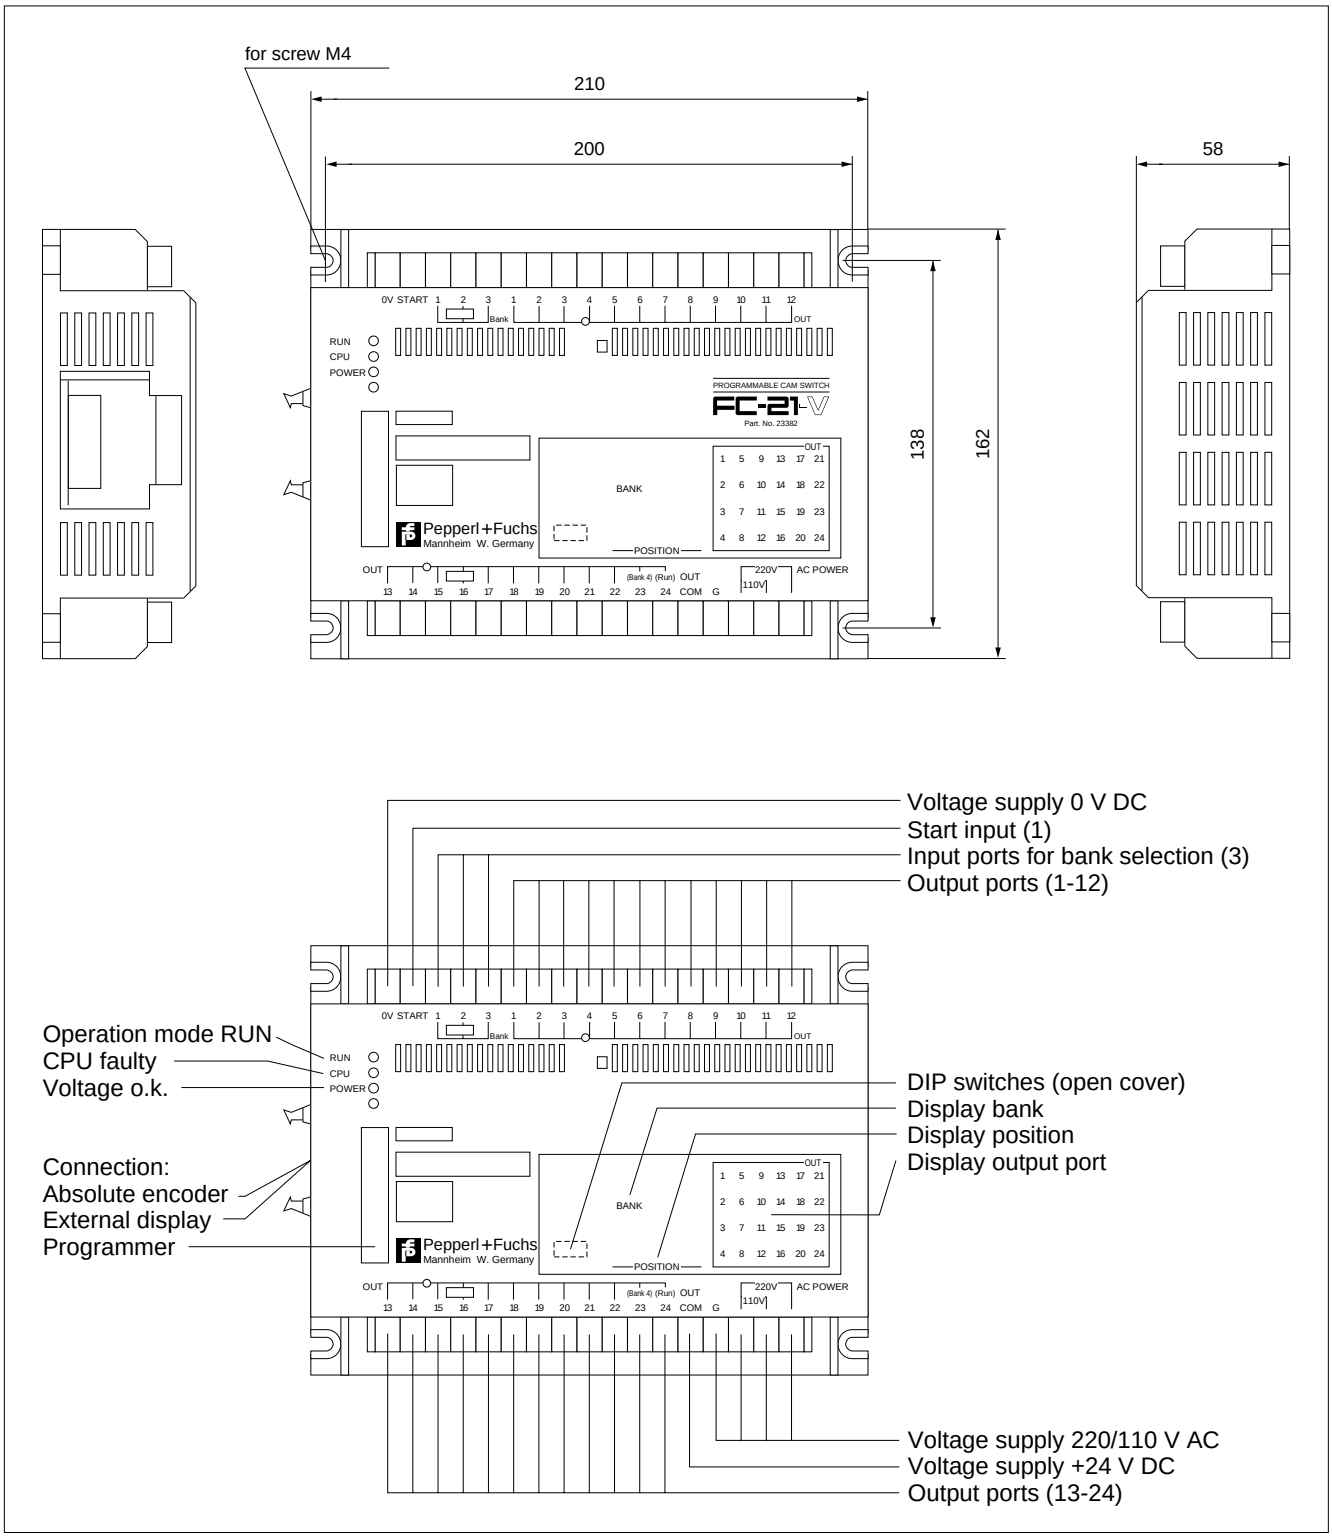


Date of issue 03.02.1997

Absolute encoder and cam switch FC-21-V

System-componets

Main unit FC-21-V



Accessorries: Mounting screws with nuts
Plug for connecting absolute encoder

Date of issue 03.02.1997

Main unit FC-21-V
Ratings 1
(general specifications)

Item	Rating	
Power source voltage:	FC-21-V: 93...126/195...264 V AC voltage 50/60 Hz and 24 V DC to supply cam output ports	
Power consumption:	30 VA	
Operating temperature range:	0°...50°C	
Storing temperature:	-20°...-70°C	
Withstanding humidity:	45%...85% (No condensing)	
Dielectric power:	2 kV, 1 minute	between AC input, output terminals and housing
Insulation resistance:	> 20 MW, 500 V DC	
Vibration resistance:	stable against vibrations with shifting amplitude of 0.3 mm,. 10...55 Hz in 3 axis directions	
Shock resistance:	10 G in 3 axis directions	
Noise immunity:	between AC-terminals: 1 kV (pulse width: 1µs, leading edge pulse time / 1 ms, polarity ±, synchronous to voltage supply, 0°... 360° phase)	
Weight:	2 kg	

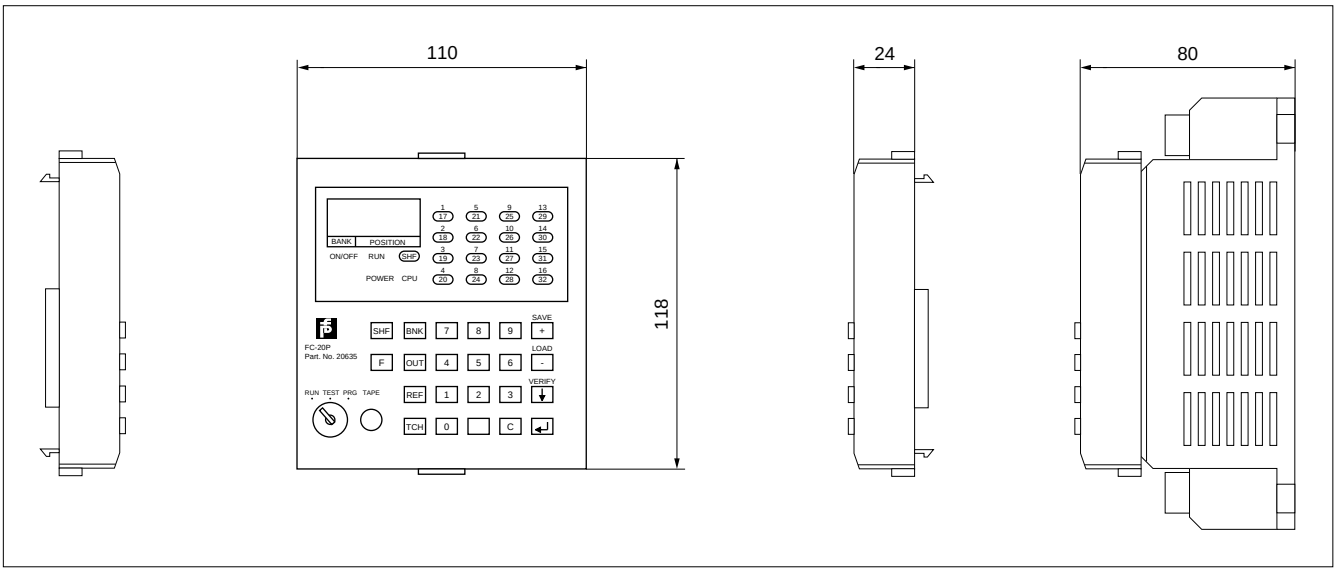
Date of issue 03.02.1997

Main unit FC-21-V
Ratings 2
(proper specifications)

Item	Specification
Control input:	1 Start-input; 4 bank change input
Absolute encoder input:	Gray-binary code (10 bit), Connection by the special connector
Resolution:	360; 512; 720 or 1024 positions (DIP switch)
Output ports:	16 or 24 (DIP switch)
Output port RUN:	Output port 24 to control peripherical apparatus (DIP switch)
Number of output ON/OFF:	max. (resolution/2) for every output port
Maximum responding revolutions:	Resolution: 360 512 720 1024 revolutions per minute: 3600 2520 1800 1260 > 3° of interval 2400 1680 1200 840 > 2° of interval 1200 840 600 420 > 1° of interval Min.distance of set points
Maximum number of banks:	Number of programs / Revolutions / Number of output ports 10 / 360 / 16 7 / 360 / 24 7 / 512 / 16 4 / 512 / 24 5 / 720 / 16 3 / 720 / 24 3 / 1024 / 16 2 / 1024 / 24
Switching direction (clockwise and counterclockwise):	clockwise: increase of the current value by the clockwise rotation when the encoder is observed form the shaft side. Counterclockwise; increase of the current value by the counterclockwise rotation when the encoder is observed form the shaft side (DIP switch changing 1)
Write protection:	ON: inhibition of program writing, correction, and deletion (DIP switch changing 6)
Value of zero point compensation:	Possible to compensate for whole range: 0...(resolution - 1)
Storage memory:	EEPROM
Display set points	Programmer: 16 LEDs (changing from 1...16 and 17...24) Haupteinheit: 24 LED
Display bank: Display position:	7-segment display LED 4-digit 7-segment display LED Height of character Programmer: 8 mm Main unit: 14,2 mm

Date of issue 03.02.1997

Programmer FC-20P



Accessories:

Connecting cable for cassette data recorder C-08J
2 keys form program selection switch

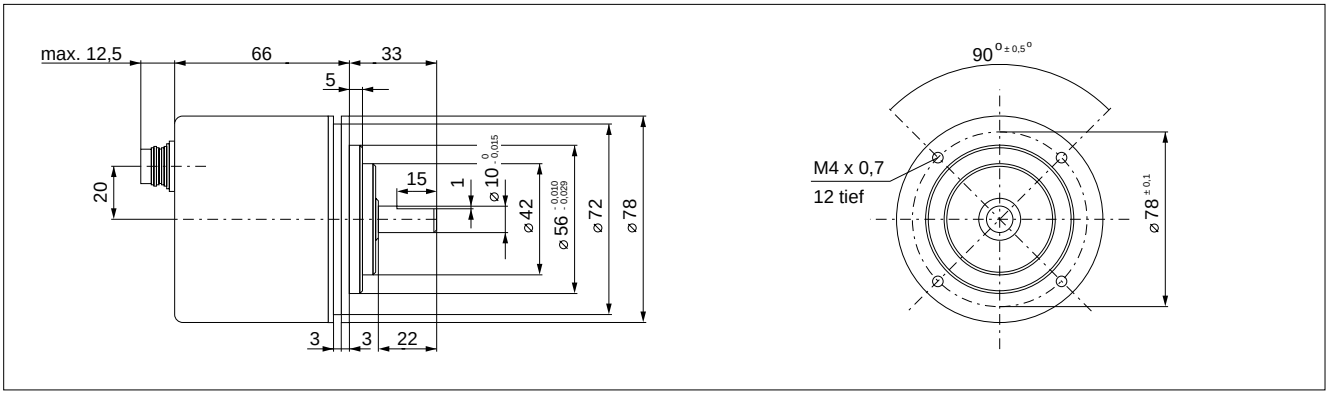
Installation:

Connecting and removing programmer - see page 26

Date of issue 03.02.1997

Absolute encoder **TRD-AK360-GC**
TRD-AK512-GC
TRD-AK720-GC
TRD-AK1024-GC

(corresponding to resolutions of 360, 512, 720 or 1024 positions)



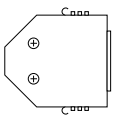
Accessories:

Servo mounting support, hexagon socket head bolts

Operation:

The absolute encoder shaft is supported by precision ball bearings. Do not apply a load exceeding the allowable limit (radial load 100 N, thrust load 50 N). The excess load will seriously reduce the service life of the shaft.

Plug MR16-L connecting cable between main unit FC-21-V and absolute encoder



Connecting cable (complete) between absolute encoder and main unit FC-21-V is an optional accessory and can be ordered - see page 21.

Date of issue 03.02.1997

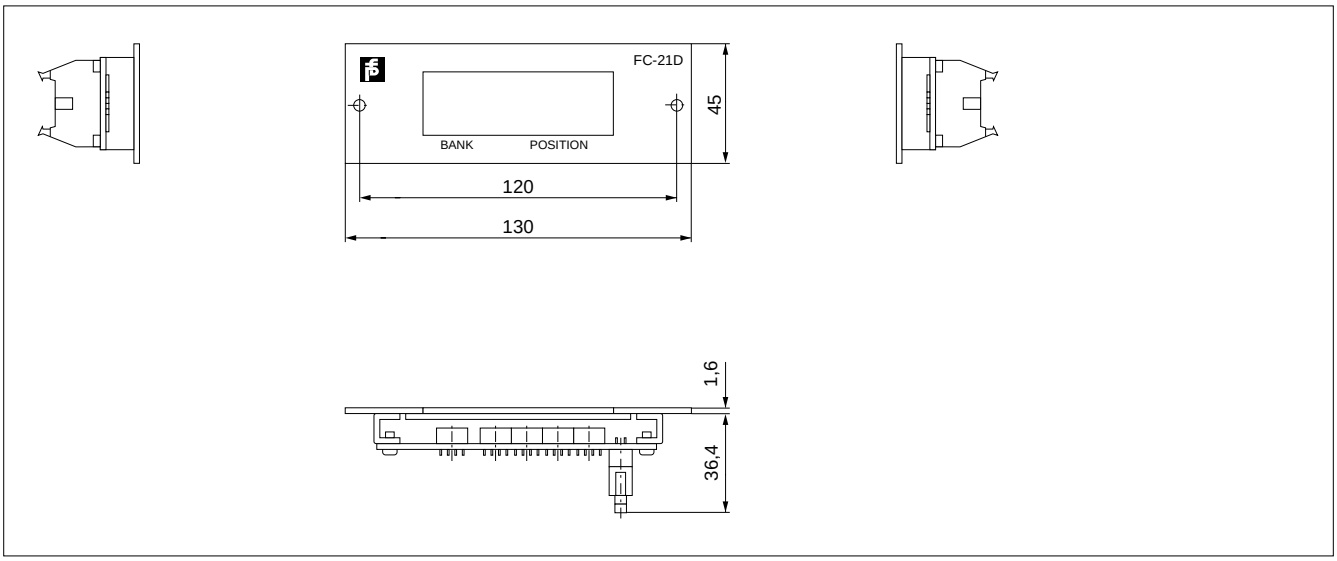
Absolute encoder
Ratings

Item	Rating
Starting torque:	4 N cm (20°C)
Shaft inertia moment:	1 N cm^2
Allowable shaft load:	Radial: 100 N; Thrust: 50 N
Allowable number of maximum rotations:	5000 rpm
Connection:	Connector (Fabr. BINDER, Serie 723, 12 pol.)
Weight:	Approx. 0.7 kg
Operation temperature range:	-10 °C...+50 °C
Withstanding humidity:	35%...85% (No condensing)
Storing temperature:	-25 °C...+80 °C
Dielectric strength:	500 V AC, 50/60 Hz, 1 min. (between the whole terminal and the housing)
Insulation resistance:	More than 10 MΩ (at 500 V AC)
Vibration resistance:	Displacement amplitude: 0.75 mm, 10...55 Hz for 3 axis directions
Shock resistance:	100 G, 11 ms for 3 axis directions
Preventive construction:	IEC-standard IP65

Date of issue 03.02.1997

System-extensions

External display unit FC-21D



Accessory:
Connecting cable with standard length 2 m, max. 10 m

Item	Rating
Operating temperature range:	0°C...+50°C
Withstanding humidity:	45%...85% (No condensing)
Storing temperature:	-10°C...+70°C
Vibration resistance:	Displacement amplitude 0.3 mm, 10...55 Hz for 3 axis directions
Shock resistance:	10 G for 3 axis directions
Weight:	0.2 kg
Functions:	Bank and position display Red LEDs, Letter height: 14.2 mm

Date of issue 03.02.1997

Connecting cable E-15PJ for programmer

Length: 1.5 m

Date of issue 03.02.1997

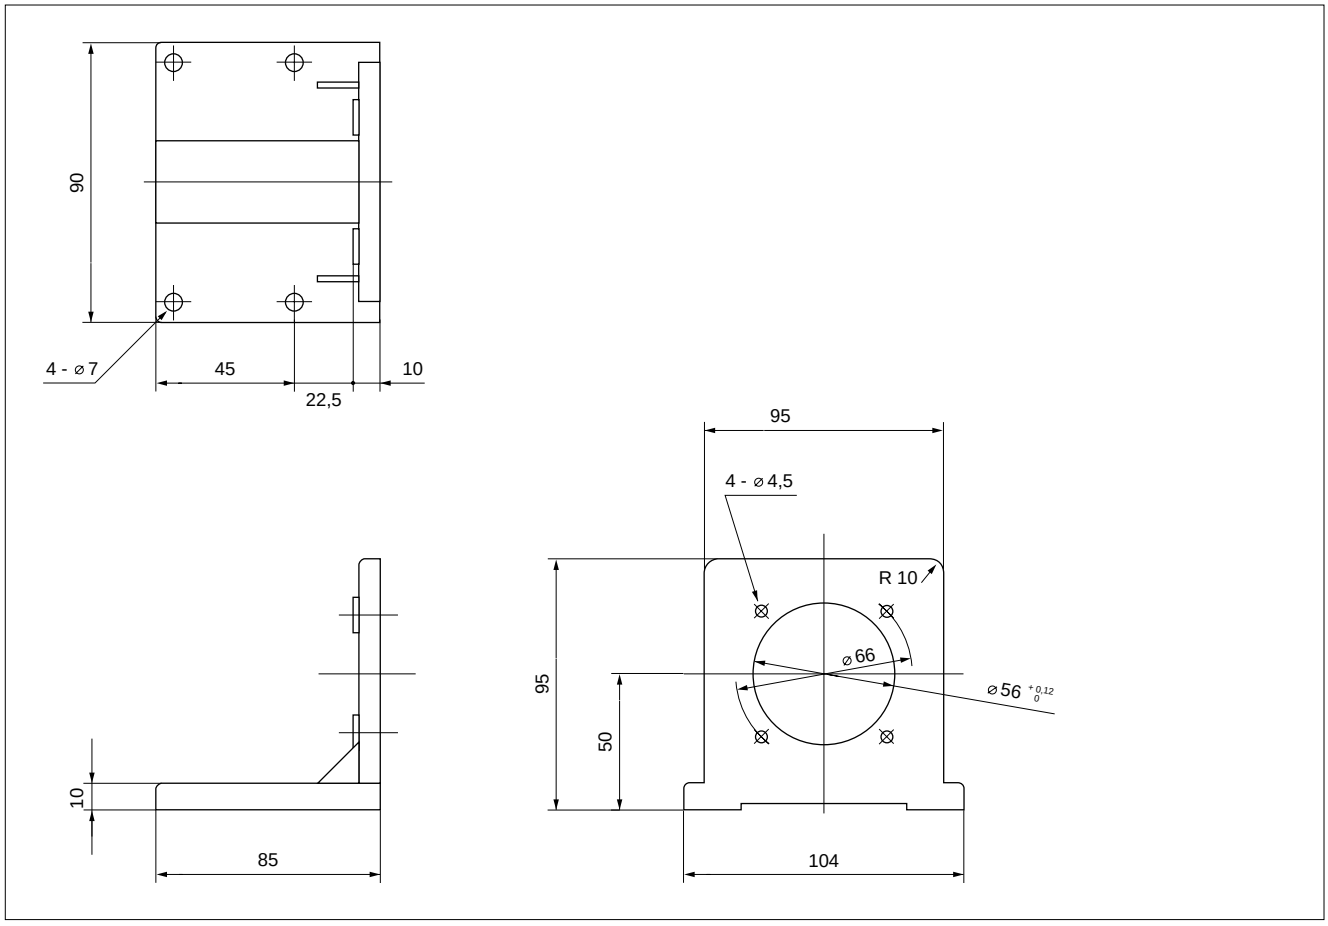
Cassette data recorder

Use a commercial cassette data recorder for a personal computer, capable of adjusting the recording level.
Radio-cassette recorders are mostly not suitable as the recording level is not compatible

Item	Rating
Recording terminal:	Microphone input
Reproduction terminal:	Earphone output: Output power 300 mW min. / 4...16Ω
Frequency characteristic:	300 Hz...4000 Hz ± 6 dB
Transfer rate:	830 baud
Modulation method:	FSK „1": 2 kHz / „0": 1 kHz
Head mark/End mark	2 kHz
File No.:	0...999 as desired

Date of issue 03.02.1997

Mounting support RT11 for absolute encoder

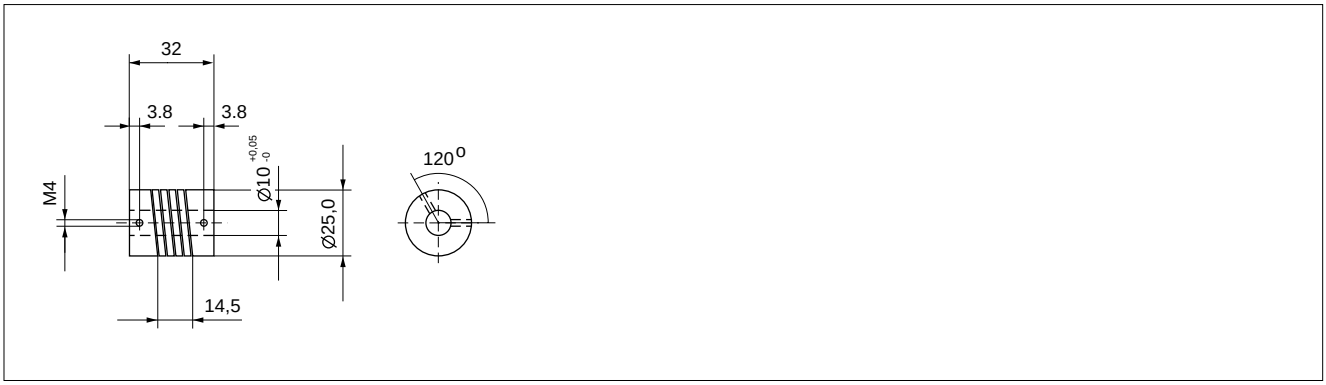


Accessory screw:

Bolt with the hexagonal screw hole on the head
M6x20(4ea)

Date of issue 03.02.1997

Coupling RU-03 for absolute encoder



Material: Aluminum
Weight: 35g

Date of issue 03.02.1997

Connecting cable for absolute encoder

Binder-Serie 723 12-pol (straight or right angle plug)
Cable 12-conductor + shield, max. length 30 m, cross section 0.25 mm^2,
Order plug and cable separately

Plug MR16-L is delivered (without cable) as an accessory to the FC-21-V

Pin assignment

Connection	Function	Colour of wire
A	+ 12 V DC	red
B	2^0	brown
C	2^1	orange
D	2^2	yellow
E	2^3	green
F	2^4	dark-blue
G	2^5	violet
H	2^6	grey
J	2^7	white
K	2^8	pink
L	2^9	light-blue
M	0 V DC	black

Shield is not connected

Pin assignment

Connection	Function	Colour of wire
1	2^5	violet
2	2^4	dark-blue
3	2^3	green
4	2^2	yellow
5	2^1	orange

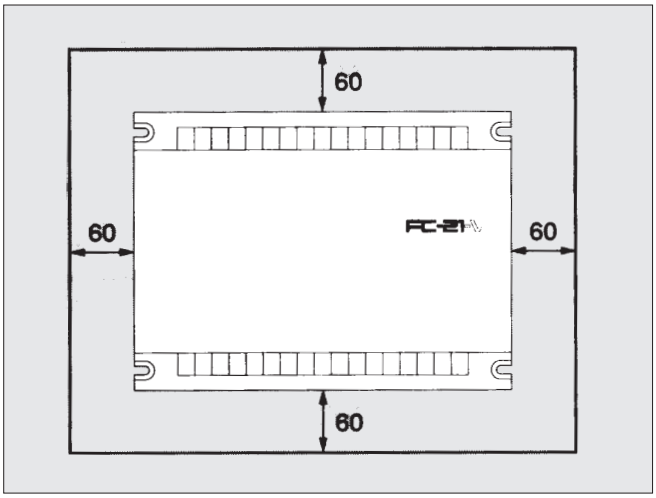
15	0 V DC	black
16	Shield	-

Date of issue 03.02.1997

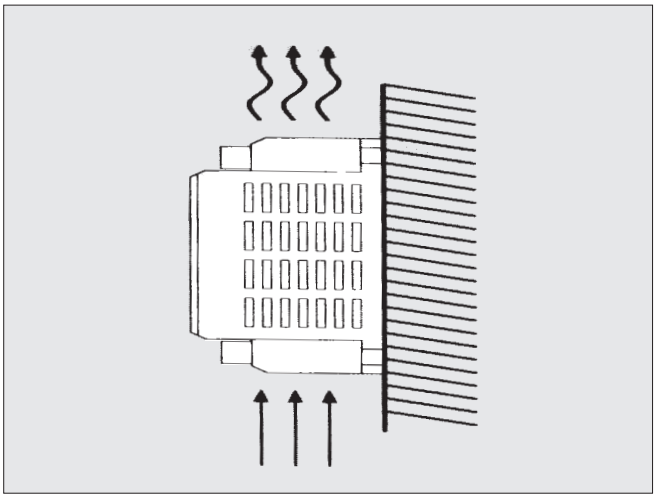
Installation

Mechanical mounting of main unit FC-21-V

1. Provide a space of at least 60 mm around the cam switch for ventilation and maintenance.



2. Install the main unit on a vertical wall as illustrated on the opposite side for dissipating heat effectively.
   The side panels of the main unit and extension base are provided with vents for releasing generated heat.

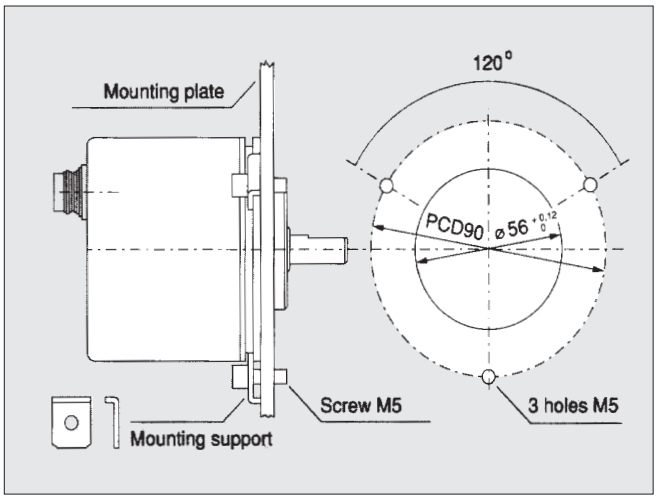


3. Avoid installing the main unit in the following places:
- where panel temperature exceeds the range of 0°C...50°C
- where ambient humidity exceeds 90% or moisture condenses because of rapid temperature change.
- where there is a considerable amount of dust, iron particles, or corrossive gases.
- where the main unit is exposed to the direct sunlight.

Date of issue 03.02.1997

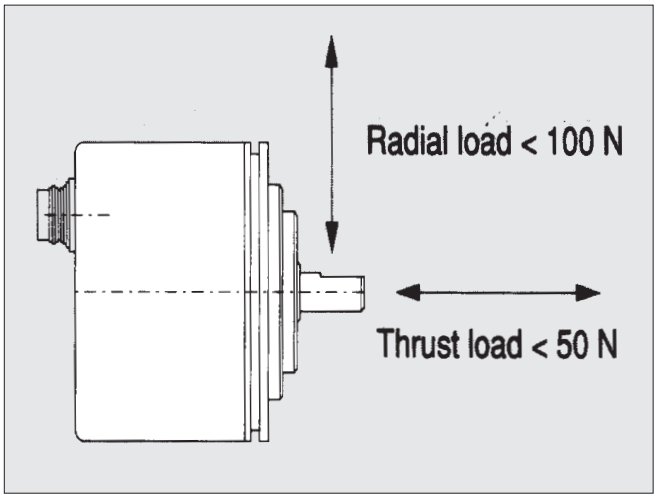
Mechanical mounting of absolute encoder TRD-AK...-GC

1. Install absolute encoder to a mounting plate - see illustration or use the mounting support RT11 (optional available)



2. Pay attention to maximum shaft load.

Loads which exceed the allowable limits lead to decrease in accuracy and service life.



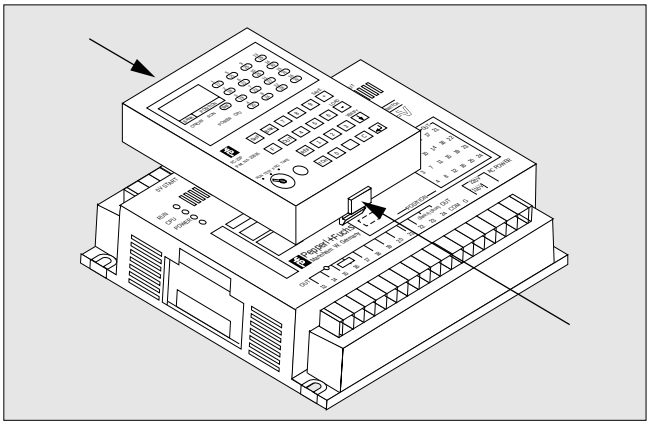
Date of issue 03.02.1997

Mechanical mounting of programmer FC-20P

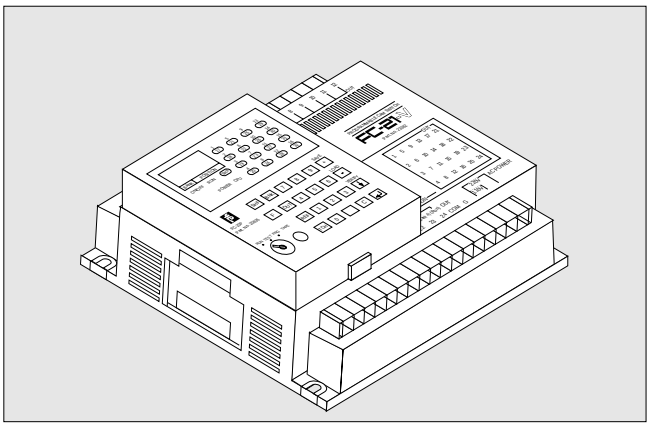
1. Mount programmer
- Switch key switch to RUN or TEST*
- Match the hook on the programmer to the opening in the main unit.
- Rock the programmer lightly up and down to connect it

It is also possible to connect programmer to main unit using connecting cable E-15PJ

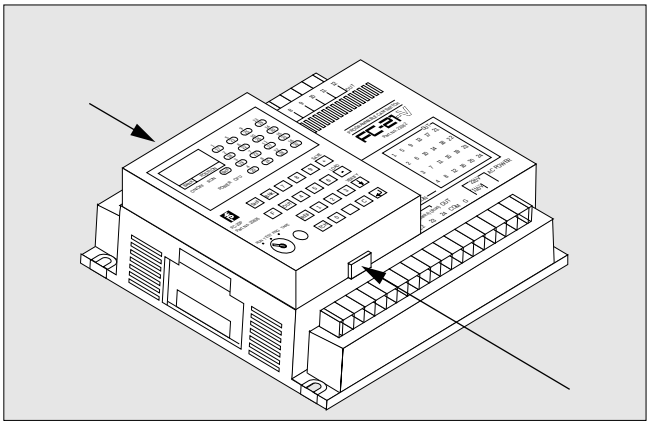
* If key switch is switched to PRG, main unit switches to PRG.



2. Pay attention to the following operation conditions:
- Control operation mode of main unit with key switch of programmer
- The choosen operation mode is stored, also if the programmer is removed.
- If voltage supply is switched off and then on, the main unit is in RUN-mode.



3. Remove programmer
- At the end of programming switch key to RUN.
- If LED RUN at programmer lights up, remove programmer (press both keys on the programmer side panel)
- If LED RUN at programmer is dark, remove programmer, switch off and then on voltage supply.



Date of issue 03.02.1997

Carry out electrical installation like this:

Find the block diagram of the main unit FC-21-V on page 28..
Find specifications of terminals on page 29.
Realize all electrical circuits outside the frame »FC-21-V« yourself.

Install electrical cable like this:

Lay the input, output, and power supply cables in isolation from eath other.
Ensure that they do not pass over the main unit.
Isolate also the connection cables of the external display unit and the absolute encoder from the power cables and the power supply cables.

Connect voltage supply to FC-21-V like this:

Connect a filter to the power supply line if there are many induction loads such as motors and AC solenoids which may generate considerable interference.
Connect terminal 31 (G) to earth.
Use terminals 31, 32 and 34 for 220 V supply.
Use terminals 31, 32 and 33 for 110 V supply.
No particular precautions against interference from the power supply is required.

Connect absolute encoder like this:

Lay the absolute encoder connection cable separately from power cables such as the motor and clutch cables.
Ground the absolute encoder to the earth.
Connect absolute encoder and main unit with a cable with a nominal cross section area of 2.5 mm^2.

Connect the shield of the abolute encoder cable to 0 V terminal of the FC-21-V since the shield wire is not connected to the grounding circuit or the housing of the absolute encoder.

Connect power source voltage to input and output terminals:

Terminal 1 (0 V) to 0 V DC
Terminal 30 (OUT COM) to +24 V DC
of an external supply.

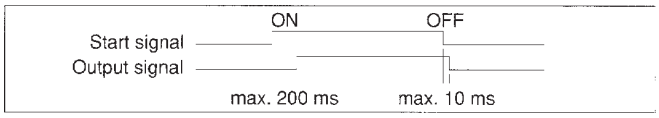
Pay attention to the following interrelationships:

Absolute encoder:

Set points depend on rotation direction

Start signal:

If start signal is switched off (terminal 2: 0 V DC) all output terminals are closed.
If start signal is switched on (terminal 2: +24 V DC), the main unit will run the selected program depending on the position returned from the absolute encoder.
Switch off voltage supply and start signal to change program.

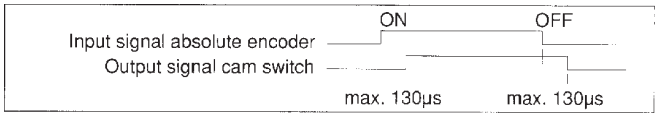


Signal for program selection:

The signal for program selection (terminal 3...5 and 28) must be given 10 ms before start signal.
Choose your program as written on page 33.

Output ON/OFF terminals:

The number of output ports (16 or 24) is selected with DIP switch 4 - see page 36.
The time delay between input signal from absolute encoder and switching off outputs is max. 130 µs.



RUN output port (terminal 24):

Use RUN-signal to control peripherical apparatus.
Therefore switch DIP switch 5 to ON.
The maximum number of output ports is then 23.
The RUN output port is switch to ON only for nomal operation (ON for operation mode PRG, TEST and RUN), otherwise it is switched to OFF (OFF for CPU faulty, changing storage and voltage decrease).
The time delay between switching from PRG to RUN (or TEST) and switching on peripherical apparatus is max. 35 ms.

Specifications terminals

Terminal No.	Symbol	Description
1	0 V	Negative common terminal of each input and output
2	START	Switching this terminal to +24 V the selected pattern (terminal 3...5, 28) is started and the cam outputs are open ON: 16...30 V, 12 mA max OFF: 0...6 V, 2 mA max
3 4 5	Bank 1 = 1 (BCD) Bank 2 = 2 (BCD) Bank 3 = 4 (BCD)	Terminals for program selection: BCD-coded ON: 16...30 V, 12 mA max OFF: 0...6 V, 2 mA max
6...29	OUT 1...OUT 24	Output ports: PNP - open collector U_{max}: U_B - 3 V; I_{max}: 30 mA short circuit-proof
28	OUT 23 or Bank 4 = 8 (BCD)	Output terminal 23 or bank 4 = 8 BCD for program selection with resolution - 360 and if only 16 ouput ports are selected. (DIP switch 4 to ON)
29	OUT 24 or RUN	Output terminal 24, if DIP switch 5 is set to OFF, otherwise RUN-output to control peripherical apparatus.
30	OUT COM	Power supply for output ports + 24 V DC (U_B) 30 V max
31	G	Earth: Grounding terminal of chassis and trans-shield
32	N	In circuit with terminal 33 or 34
33	110 V (L)	Connecting with terminal 32: voltage supply 110 V AC
34	220 V (L)	Connecting with terminal 32: voltage supply 220 V AC
C1...C10	2^0...2^9	Input signals of absolute encoder: ON: 10...13.8 V, 3 mA OFF: 0...2 V, 1 mA max
C11, C12 C15, C16	+ 12 V 0 V	Voltage supply of absolute encoder: 10.8...13.2 V DC; 70 mA max

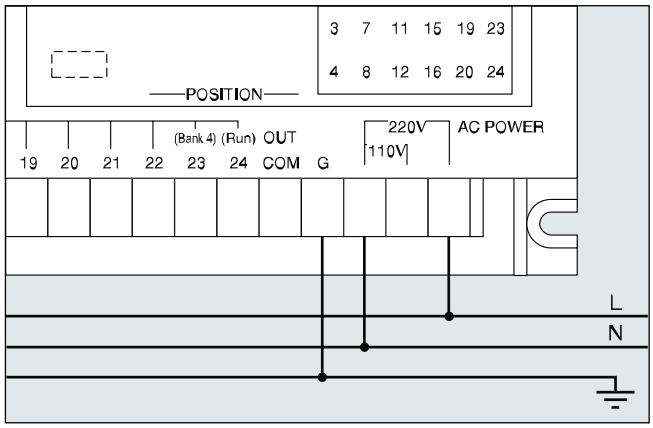
Date of issue 03.02.1997

Operation

Starting FC-21-V

1. Switch on voltage supply

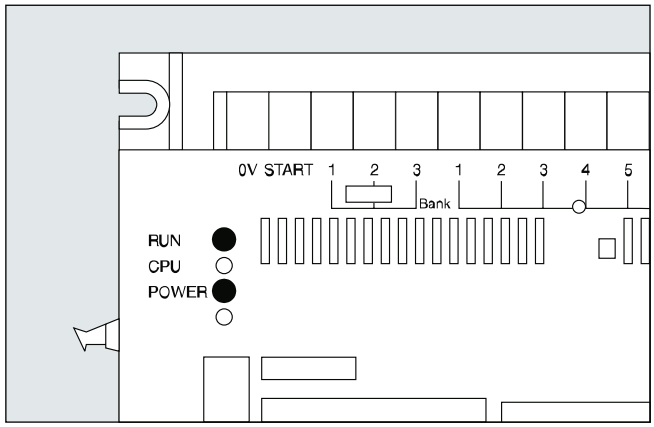
Voltage supply is switched on by:
(Write down here how to do this with your apparatus, e.g. switch on main switch of switch cupboard)



2. Check for correct operation mode

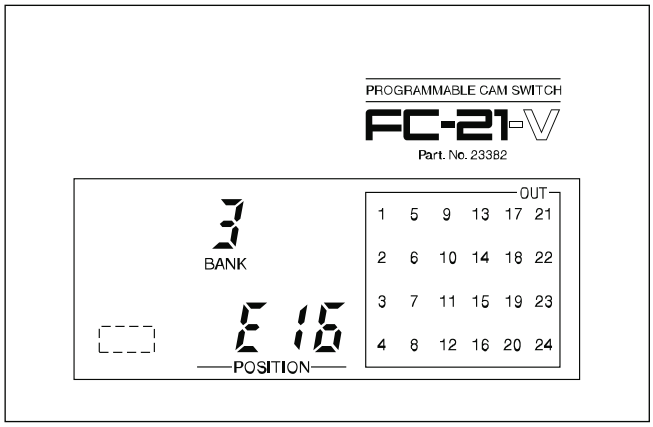
The FC-21-V operates correctly, if
- both LEDs RUN and POWER light up
- program number lights up on BANK
- position number lights up on POSITION

If LEDs RUN or POWER are dark
- go to trouble detection - page 59



3. Clear errors (if E... is displayed)

If an error is displayed on POSITION (e.g. here E16):
- go to trouble detection - page 60

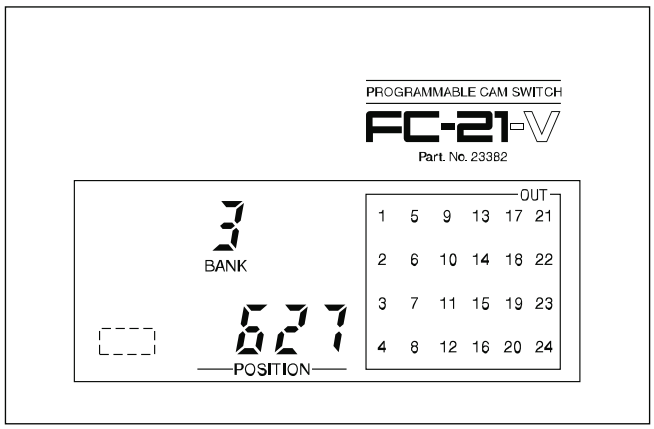


Date of issue 03.02.1997

Changing program

4. Change program

If you like to run another program, but not the displayed one, change program like this:
- Select another program from the EEPROM - see step 5.
- Read another program from cassette - see page 52
- Write a new program - see page 42 and 43



5. Select another program from the EEPROM

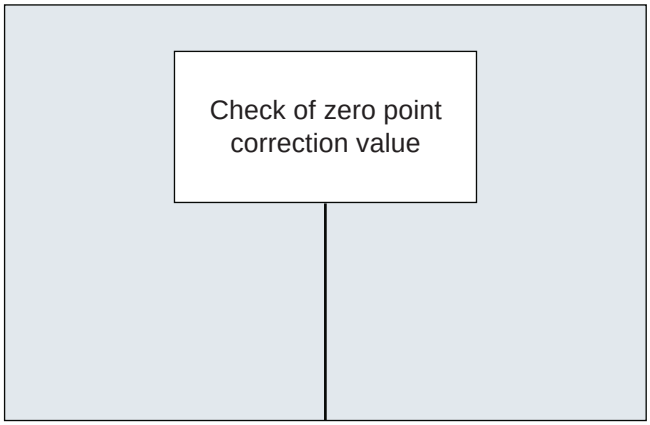
Look into your application form to know the program number.
Switch off voltage supply or start signal (terminal 2 = OFF)
Switch terminal 3...5 and 28 (BANK 1...4) according to the opposite chart (Write down here the position of an optional switch, if mounted)

Switch on voltage supply

Number of program	Inputs for program selection			
	BANK 1 Terminal 3	BANK 2 Terminal 4	BANK 3 Terminal 5	BANK 4 Terminal 28
0	OFF	OFF	OFF	OFF
1	ON	OFF	OFF	OFF
2	OFF	ON	OFF	OFF
3	ON	ON	OFF	OFF
4	OFF	OFF	ON	OFF
5	ON	OFF	ON	OFF
6	OFF	ON	ON	OFF
7	ON	ON	ON	OFF
8	OFF	OFF	OFF	ON
9	ON	OFF	OFF	ON

6. Check program

You can check following parts of the program:
- Value of zero point compensation - see page 44
- Set points of cam circuits - see page 46 and 47

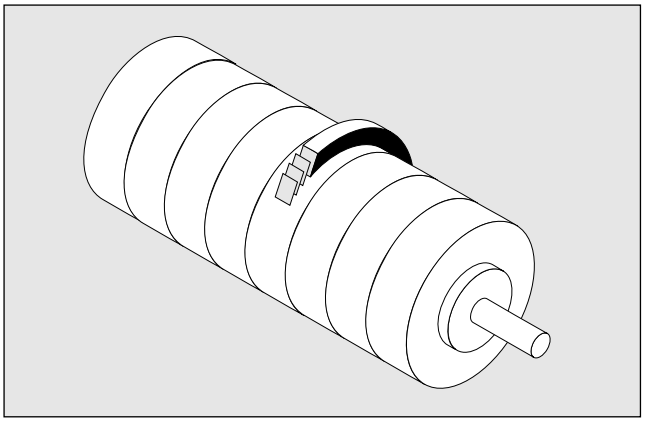


Date of issue 03.02.1997

Adjusting cams

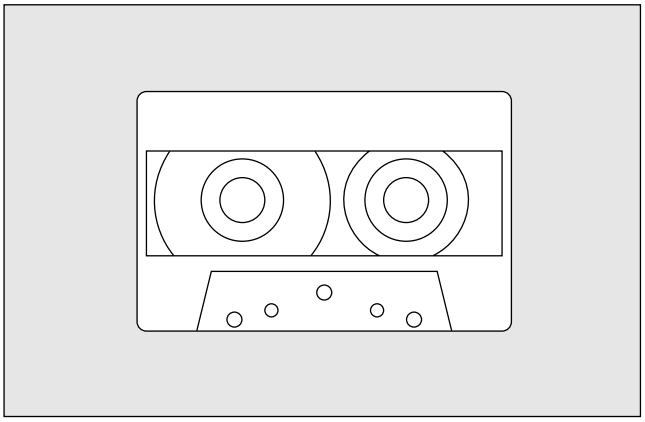
7. Adjust set points

You can change set points of every cam circuit:
- during operation mode - see page 50
- with machine position during writing by teaching method
- see page 43



8. Save program on cassette

You can save the memory of the EEPROM to a commercial cassette
- Write to tape (SAVE) - see page 51



Date of issue 03.02.1997

Increases set point by 1

Press key:

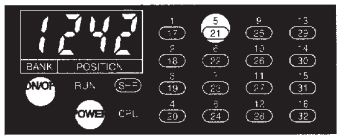
TCH

Drive machine to desired position



Press key:

↵

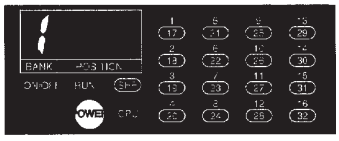
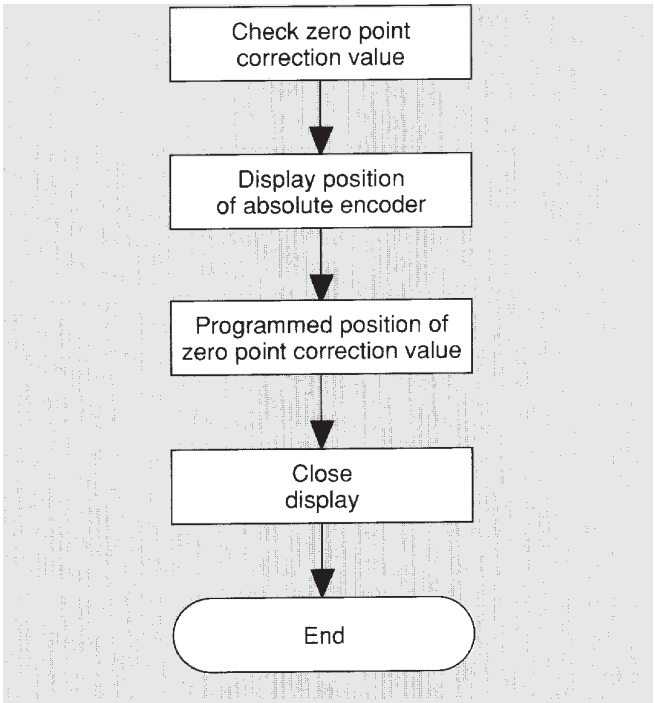
Press keys:

BNK | 1 | ↵



This is to transfer data from RAM to EEPROM.
Programs will be saved, if voltage supply is switched off.

Date of issue 03.02.1997



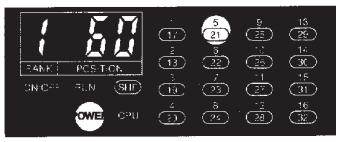
Check zero point correction value

Press key:

REF

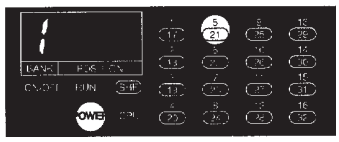
Press key:

TCH

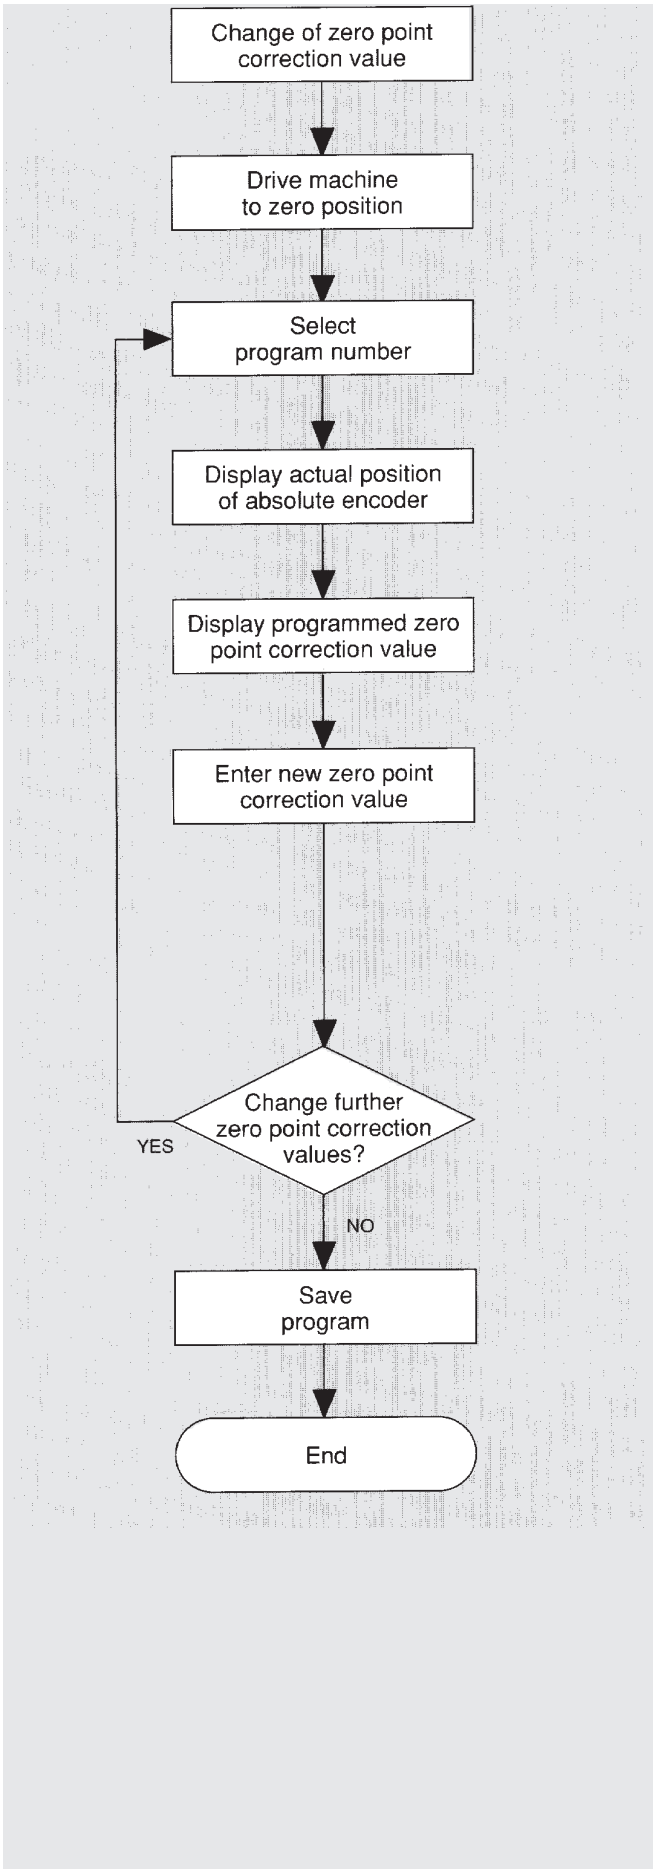


Press key:

C

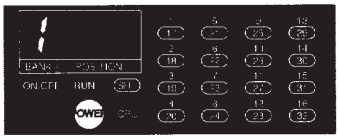


Date of issue 03.02.1997

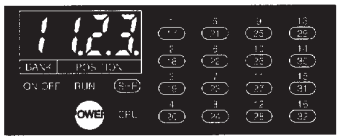


Change zero point correction value

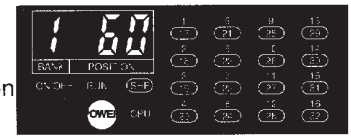
Press keys:
BNK 1 ↵
(here e.g. program 1)



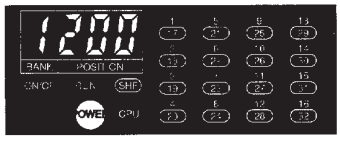
Press key:
REF



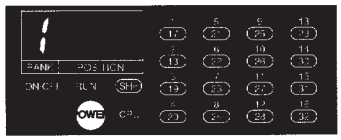
Press key:
TCH
Existing zero point correction value is displayed



Press keys:
2 0 0
(here e.g. position 200)

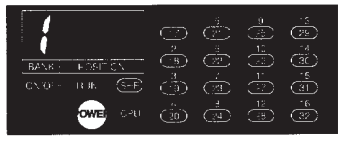


Press key:
↵



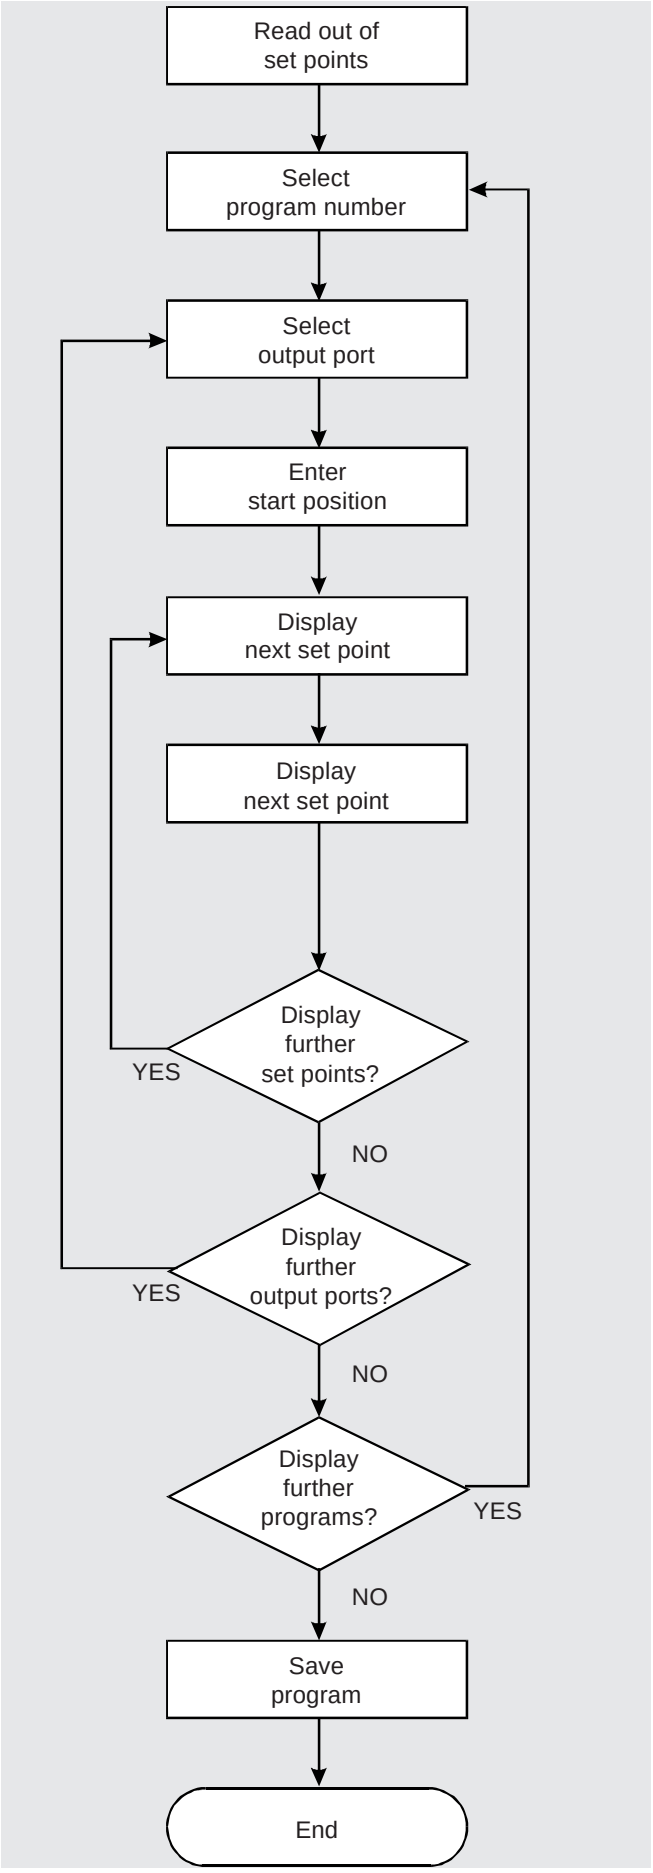
The instantaneous position - 123 - of absolute encoder will be changed to - 200 -. If no value is entered, zero point correction value will be set to zero. Enter values between 0 and 360 (512; 720; 1024)

Press keys:
BNK 1 ↵



This is to transfer data from RAM to EEPROM.
Programs will be saved, if voltage supply is switched off.

Date of issue 03.02.1997



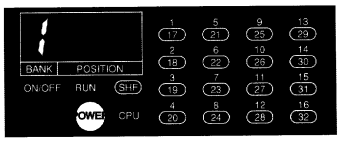
Read out of set points

ON- and OFF-positions of one output port are displayed. In TEST- and RUN-mode the main unit displays only positions of absolute encoder and status of output ports only, if start input signal is set to ON.

Press keys:

BNK 1 ↵

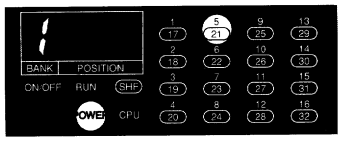
(here e.g. program 1)



Press keys:

OUT 5 ↵

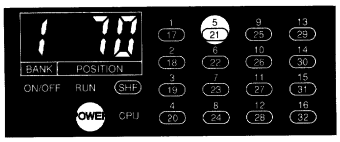
(here e.g. output port 5)



Press keys:

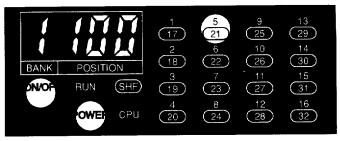
7 0

(here e.g. position 70)



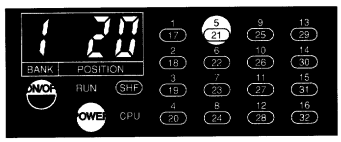
Press key:

↓



Press key:

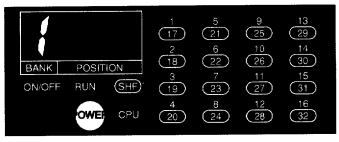
↓



The set point close to the entered start position will be displayed. If no start position is entered, the first ON-position in positive direction will be displayed.

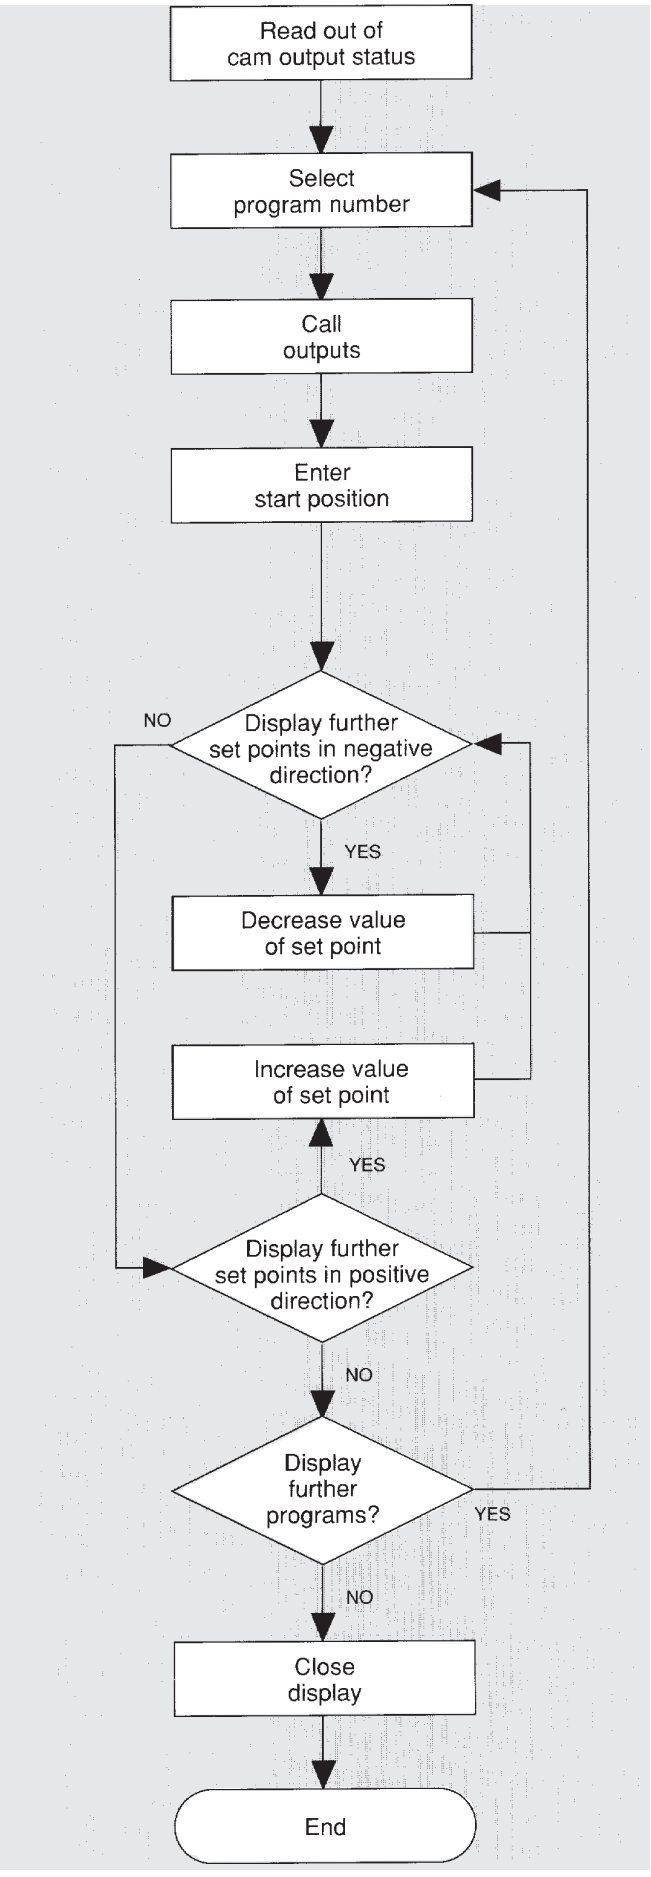
Press keys:

C



In TEST- and RUN-mode only the programmer will display the actual data.

Date of issue 03.02.1997



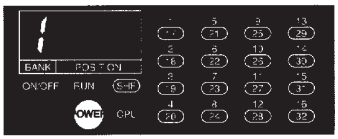
Read out of cam output status

ON- and OFF-positions of all output ports are displayed. In TEST-mode programs can only be called using external input terminals for program selection.

Press keys:

BNK 1 ↵

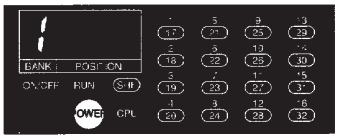
(here e.g. program 1)



Press keys:

OUT ↵

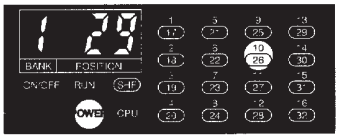
Status of all output ports are displayed



Press keys:

2 9 ↓

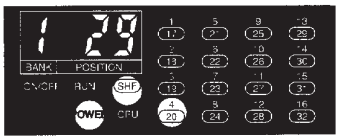
(here e.g. position 29)



Press key:

SHF

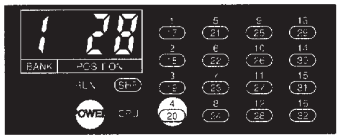
to display output port with number greater than 16



The programmer only displays output port with number 1...16, after pressing the SHF-key the output ports with number 17...24 will be displayed. On the main unit all output ports are displayed.

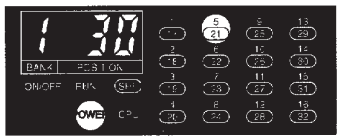
Press key:

-



Press key:

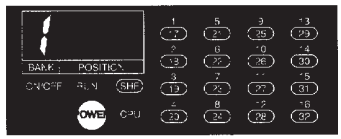
+



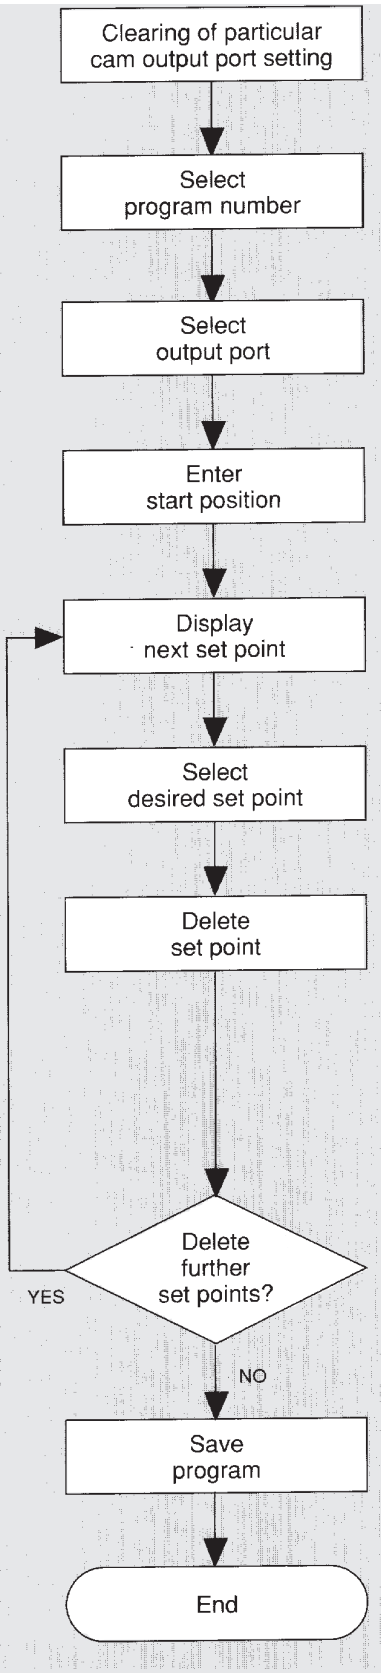
Pressing + or - key will change position by 1 and all status of output ports will be displayed for this position.

Press key:

C

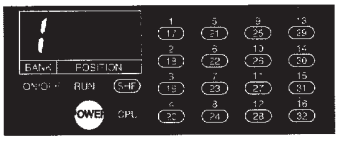


Date of issue 03.02.1997

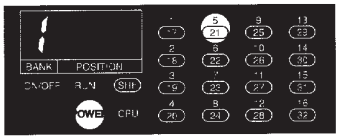


Clearing of particular cam output port setting

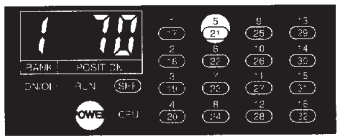
Press keys:
BNK 1 ↵
(here e.g. program 1)



Press keys:
OUT 5 ↵
(here e.g. output port 5)

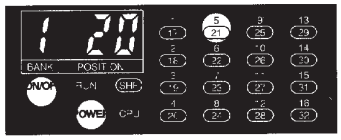


Press keys:
7 0
(here e.g. position 70)

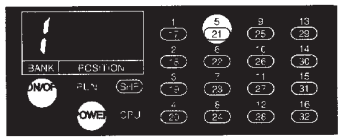


Press key:
↓

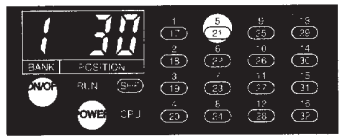
Press key:
↓
Press key quite often, up to desired position is displayed



Press key:
C

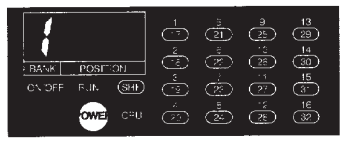


Press key:
↵



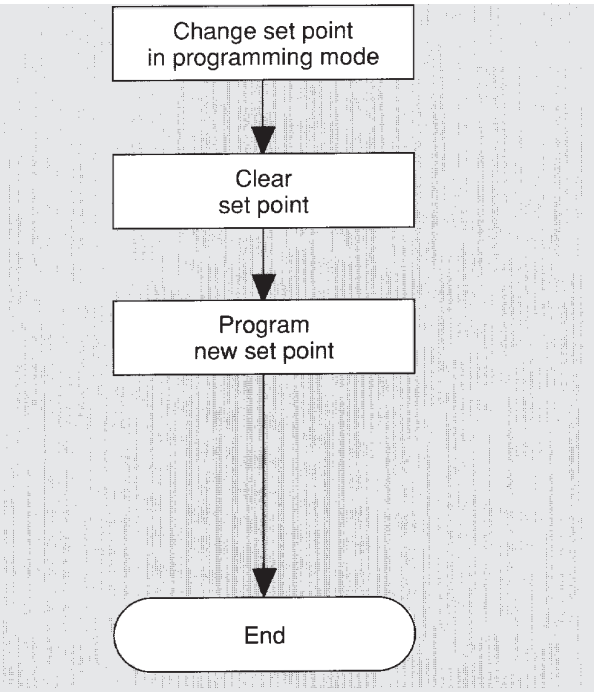
The ON- and OFF-position will be cleared and the next ON-position will be displayed.

Press keys:
BNK 1 ↵



This is to transfer the new program from RAM to EEPROM.

Date of issue 03.02.1997

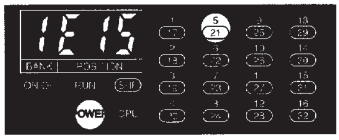


Change set point in programming mode

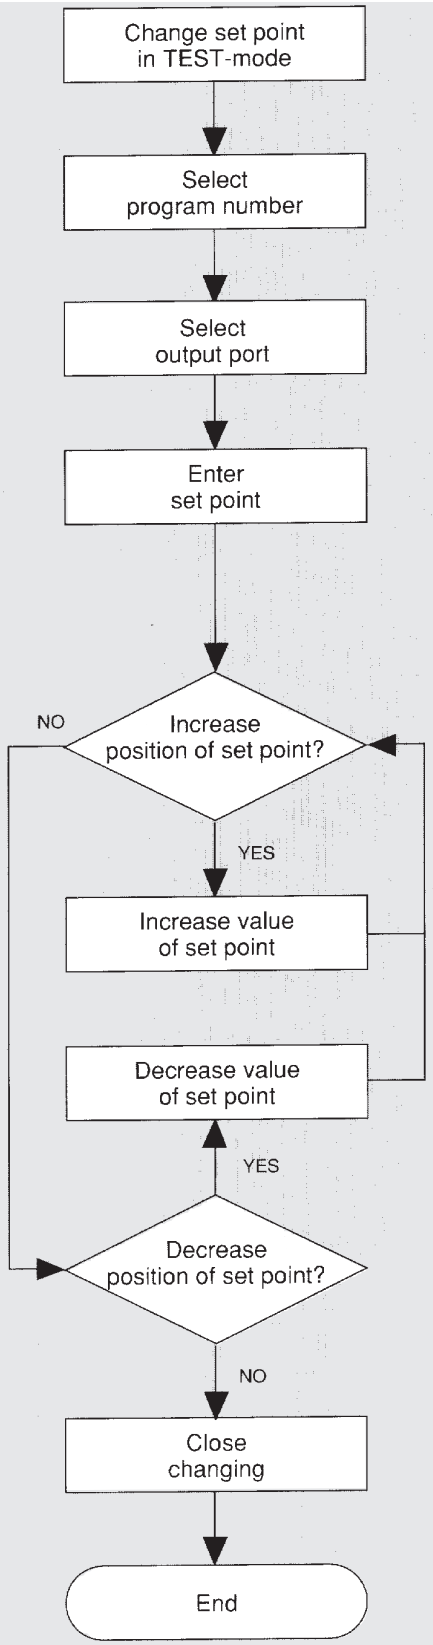
Change set point:
Clear existing set point
- see Clearing of particular cam output setting page 48

Writing of a set point:
- see writing by keying in - page 52
- see writing by teaching method - page 53
If the new set point overlaps an existing set point, the error message will be displayed:

Error message E15:
Double set point
(here for program 1, output port 5)



Date of issue 03.02.1997

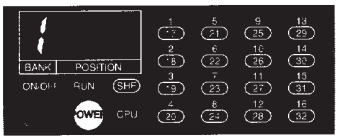


Change set point in TEST-mode

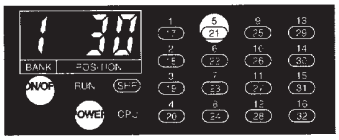
Start signal (terminal 2) must be switched on.

Switch on desired program using input and output ports for program selection: terminal 3...5, 28
(here e.g. program 1)

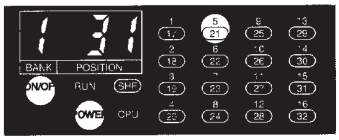
Press keys:
OUT 5 ↵
(here e.g. output port 5)



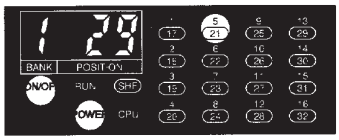
Press keys:
3 0 ▼
(here e.g. position 30)



Press key:
+

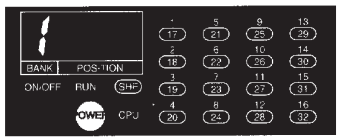


Press key:
-

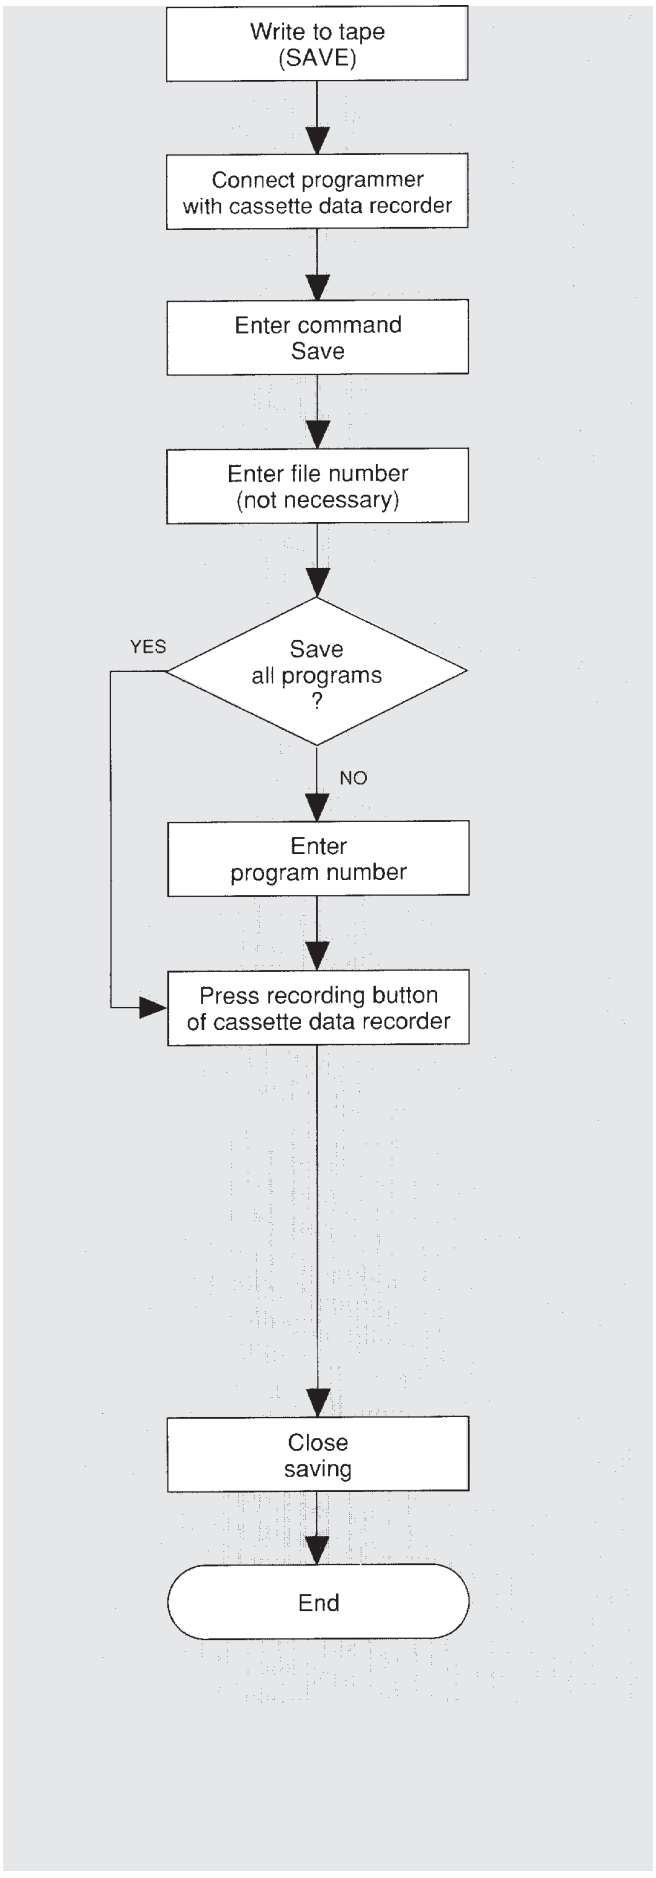


After pressing + oder - key the position will be changed by 1 and status of output ports will be displayed for this position.

Press keys:
OUT C



Date of issue 03.02.1997



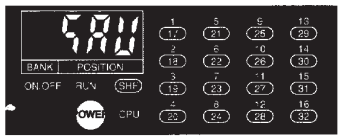
Write to tape (SAVE)

You can indicate up to 1000 programs

Connect cassette jack of the cam switch with recording socket (microphone input) of cassette data recorder using cable C-08RJ.

Press keys:

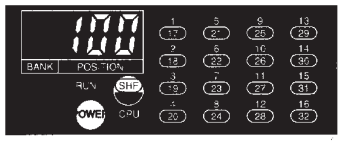
SHF +



Press keys:

1 0 0

(here e.g. file number 100)

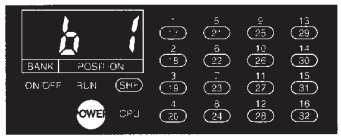


You can enter a value between 0 and 999 inclusive.
If no value is entered, the file is indicated as - 0 -.

Press keys:

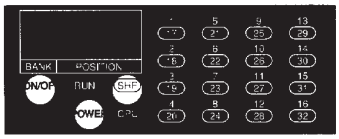
BNK 1

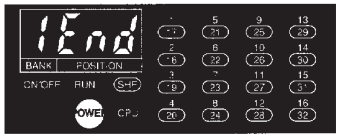
Enter program number between 0...9



Press key:

↵

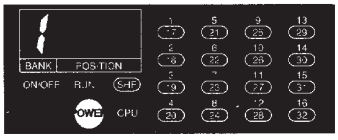




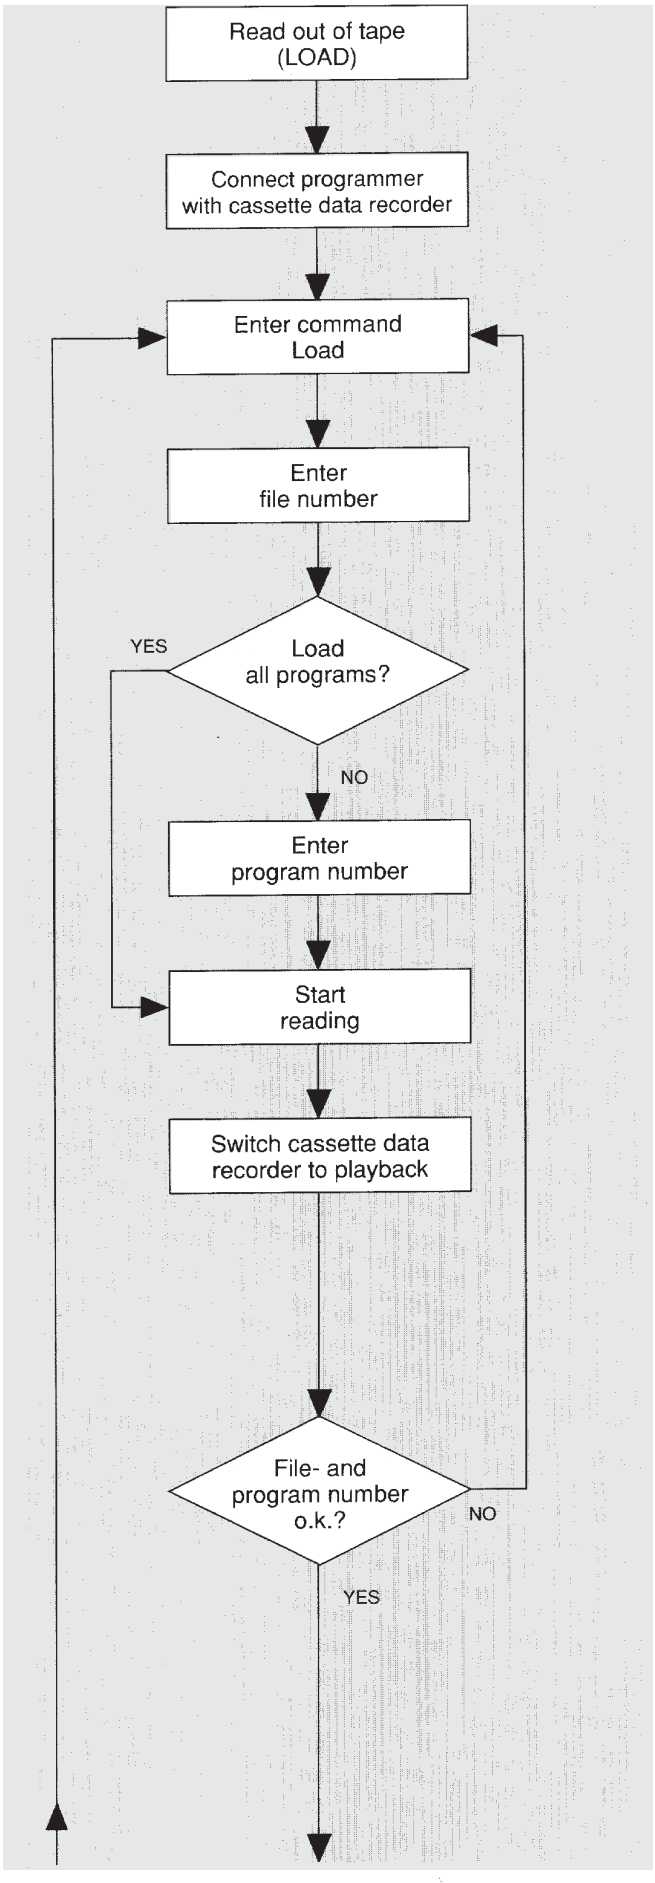
The program number will be displayed, if a single program is transferred; - 0 - will be displayed, if the whole contents of the memory will be transferred.

Press key:

C



Date of issue 03.02.1997

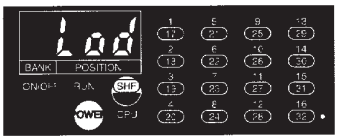


Read out of tape (LOAD)

Connect cassette jack of cam switch with earphone jack of cassette data recorder using cable C-08RJ.

Press keys:

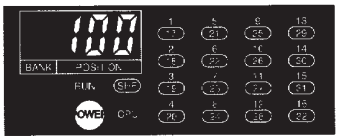
SHF -



Press keys:

1 0 0

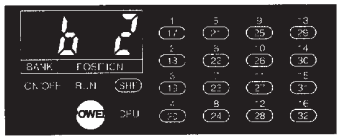
(here e.g. file number 100)



Press keys:

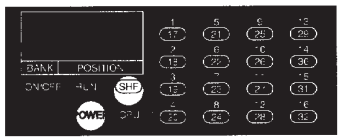
BNK 2

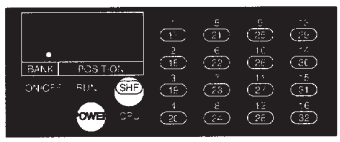
Enter program number between 0...9



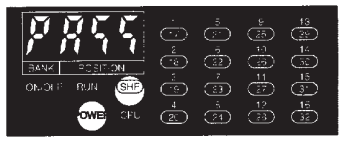
Press keys:

↵





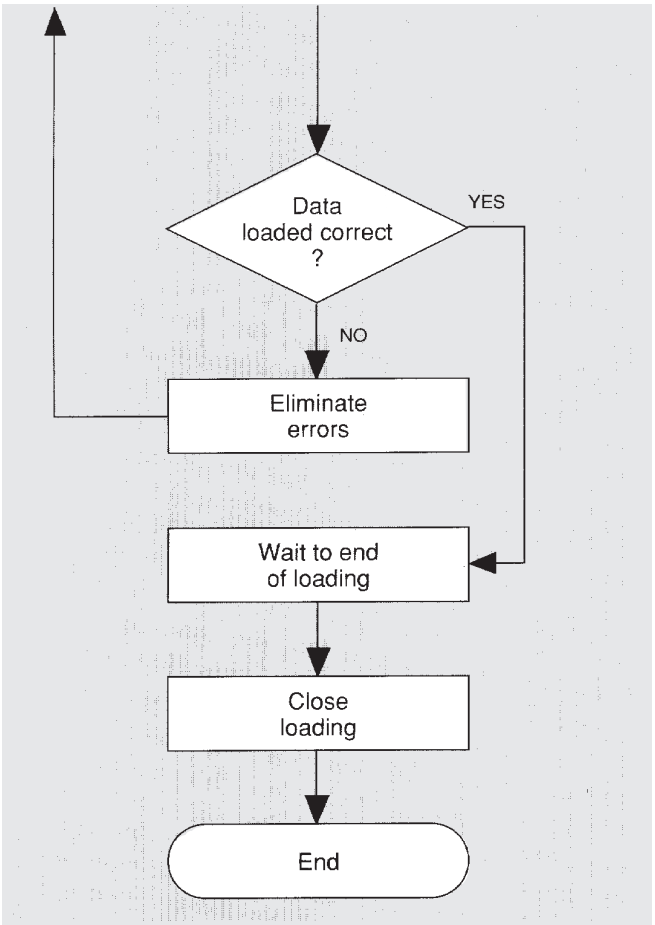
The white spot at BANK is the level display. Adjust volume control button at cassette data recorder so that level display lights up continuously.



If PASS is displayed, the entered file- and program number don´t correspond to those on the tape:
Enter command loading again

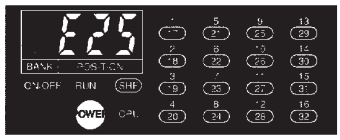
Con´t next page

Date of issue 03.02.1997



Read out of tape (LOAD)
(con´t from previous page)

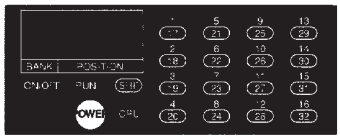
If error message is displayed:
- see trouble detection page 58



Press keys:

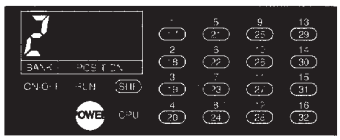
C

if error is eliminated

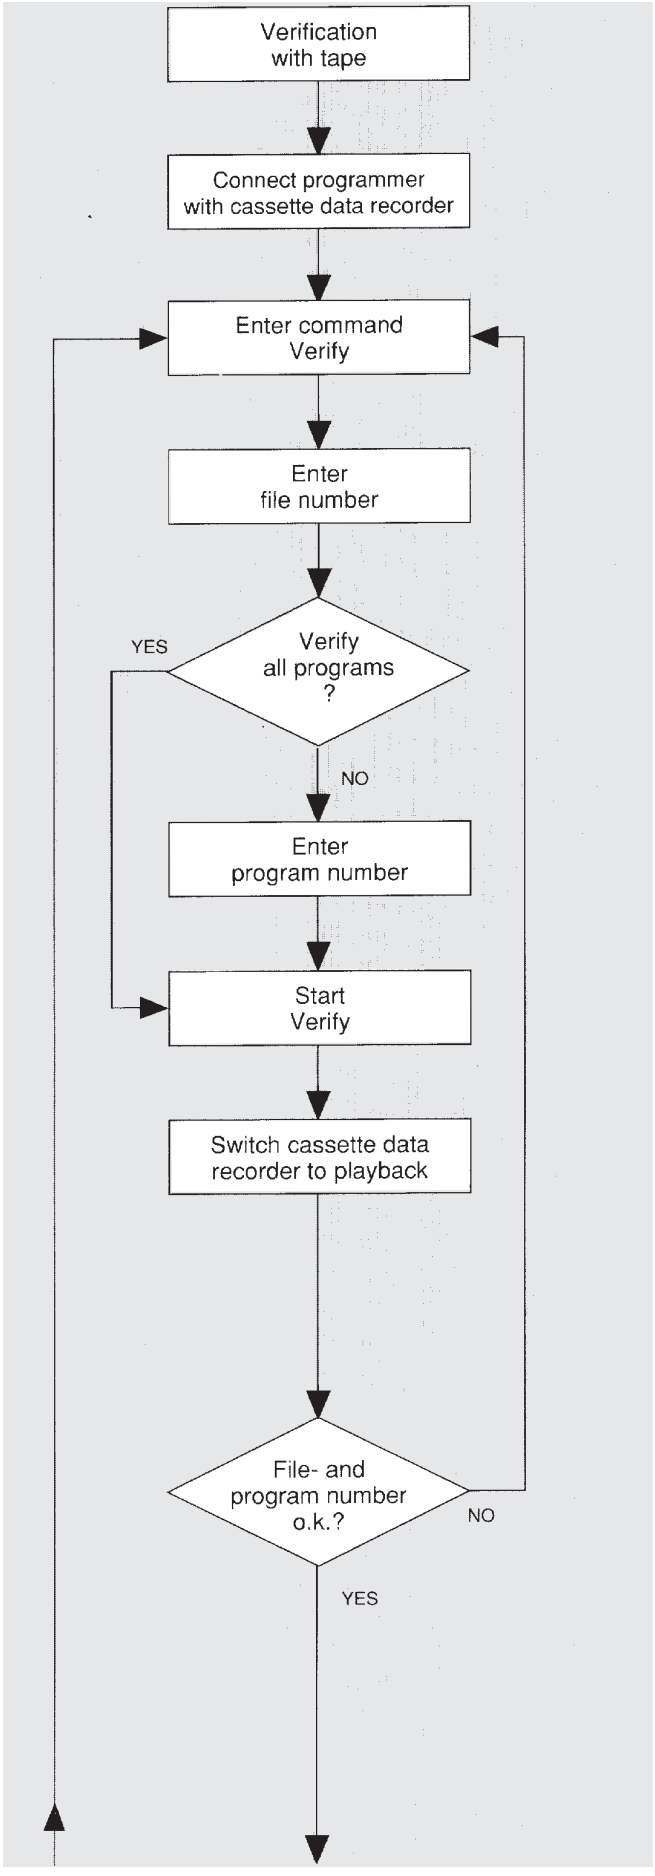


Press key:

C



Date of issue 03.02.1997

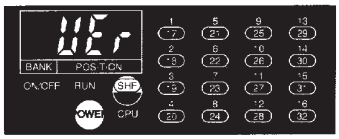


Verification with tape

Connect cassette jack of cam switch with earphone jack of cassette recorder using cable C-08RJ.

Press keys:

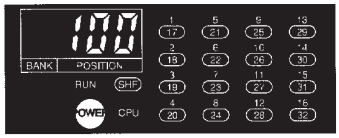
SHF ↓



Press keys:

1 0 0

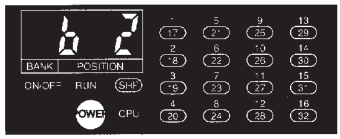
(here e.g. file number 100)



Press keys:

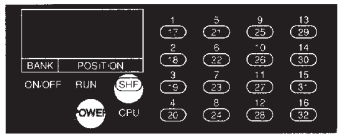
BNK 2

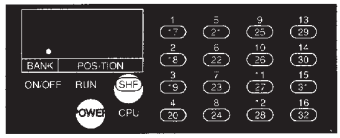
Enter program number between 0...9



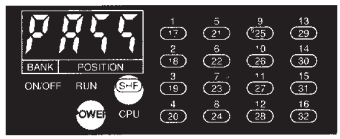
Press key:

↵





The white spot at BANK is the level display. Adjust volume control button at cassette recorder so that the level display lights up continuously.



If PASS is displayed, the entered file- and program number don´t correspond to those on the tape:
Enter command Verify again.

Trouble detection

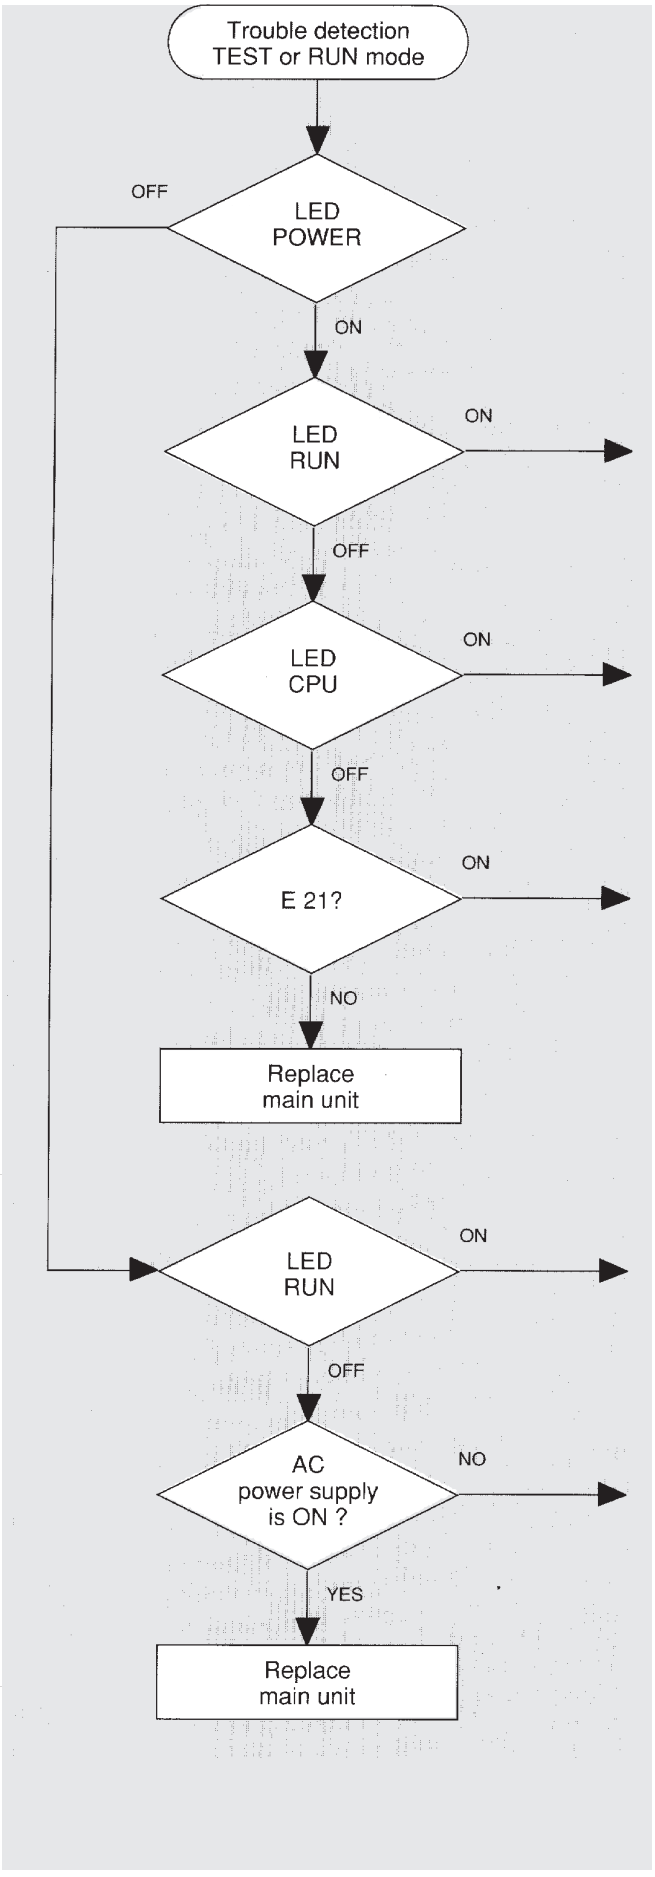
List of error codes
(Clear display of error meassage by pressing key C)

Error code	Error	Description	Remedy
E01	Input error	Input keys were pressed in wrong sequence	Pay attention to correct sequence
E11	Bank No. error	False bank is specified	Check of bank number (DIP switch 2...4)
E12	Cam No. error	False cam No. is specified	Check of output port numbers (DIP switch 2...4)
E13	Position setting error	False position is set	Check of resolutin (DIP switch 2...4)
E14	Writr protection error	Written in write protection condition	Switch OFF power supply and set DIP switch 6 to OFF position for writing
E15	Overlapped position setting	A position is set in a range already set	Clear previous setting before updating. Refer to operating procedure table on page 37 and 38 (No. 10...12)
E16	DIP switch error	Setting of DIP switch change	Switch OFF power supply, reset DIP switch, and switch ON power supply in PRG mode
E17	Bank input error	False bank is entered	Check number of banks (DIP switch 2...4). Check bank selection signal
E18	Encoder signal error	Input of false encoder data or wrong model	Check of resolution (DIP switch 2, 3). Check of encoder input circuit
E21	Memory change error	User memory content changes	Switch OFF power supply and check DIP switch. Switch ON power supply in PRG mode
E22	Memory error	Parity-Check of RAM memory is negative	Switch OFF power supply and check DIP switch. Switch ON power supply in PRG mode
E25	Cassette tape verification error	Memory contents are different from information recorded on tape	Re-record or re-load
E26	Program load error	False set of DIP switch	Switch OFF power supply and check DIP switch. Switch ON power supply in PRG mode

Date of issue 03.02.1997

Pepperl+Fuchs Group · Tel.: Germany (6 21) 7 76-11 11 · USA (3 30) 4 25 35 55 · Singapore 7 79 90 91 · Internet http://www.pepperl-fuchs.com

General trouble detection



Check input/output circuit
- see page 60

Check central processing unit (CPU)
- see page 62

Check memory contents (EEPROM)
- see page 63

If no operation is recognizable, the main unit is faulty.

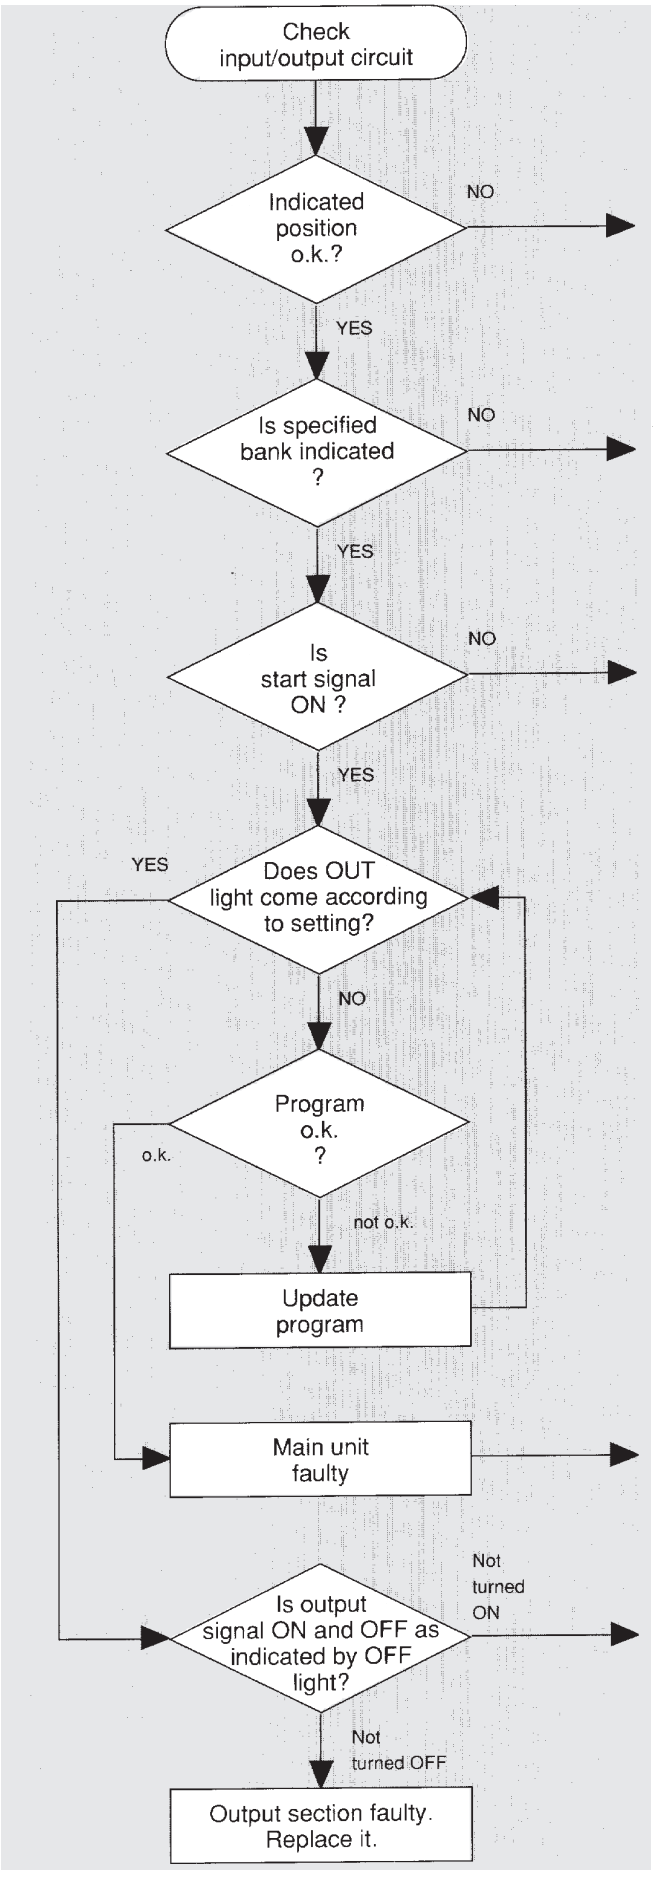
Power supply LED faulty

Switch ON voltage supply.

Power supply section faulty

Date of issue 03.02.1997

Check input and output circuits



Check position display:
- Check absolute encoder wiring
- Check absolute encoder
- Check DIP switch

Check signal for program selection:
- Check bank input circuit

Check start signal:
- Check start signal circuit

Check output signal

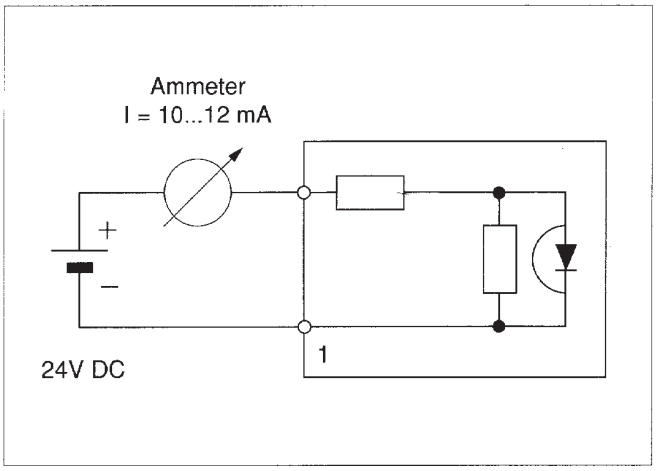
Replace main unit

Check output circuit:
- Check output wiring
- Check load

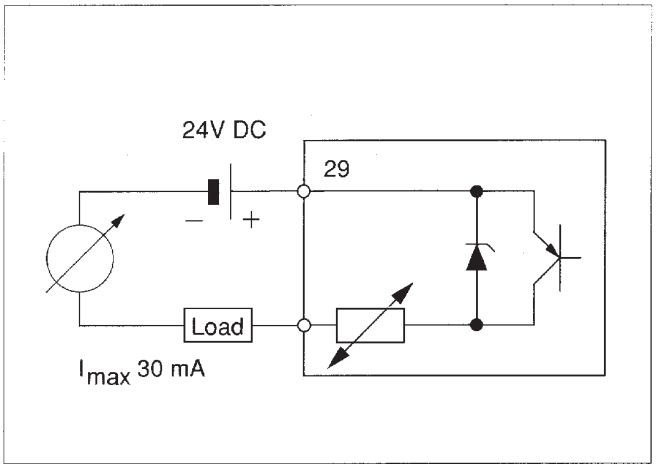
Date of issue 03.02.1997

Check input and output ports

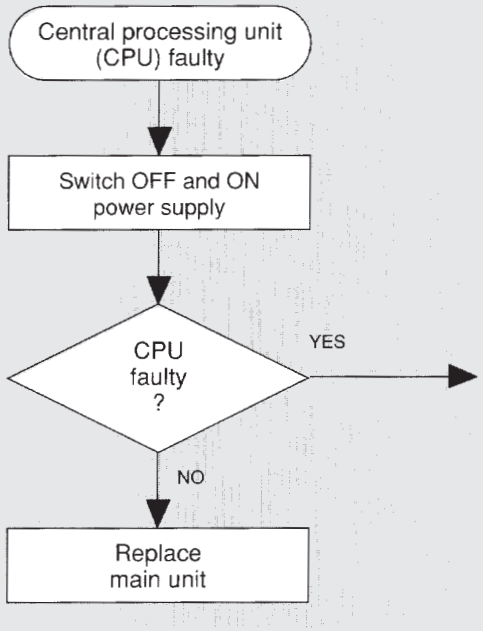
Input ports: (Start, Bank 1...4)



Output ports: (1...24)



Date of issue 03.02.1997



Check central processing unit (CPU)

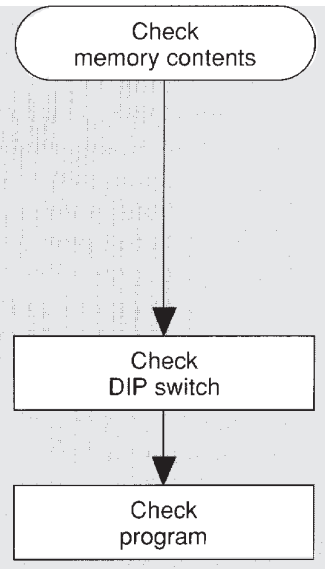
If CPU is faulty,
- the program doesn´t run
- the LED RUN is dark
- CPU stops within 100 ms

At programmer
- only LED POWER
- and LED CPU light up

Take precautions against electrical interference as CPU may be disrupted.

Central processing unit is faulty.

Date of issue 03.02.1997

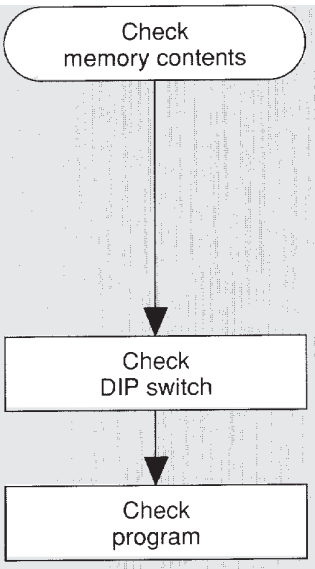


Check memory contents (EEPROM) (Memory change error)

A Parity-Check of memory contents is carried out:
- during switch ON voltage supply
- during switch to RUN-mode

If an error is detected,
- the program doesn´t run
- the error message E21 is displayed

Date of issue 03.02.1997



Check memory contents (RAM) (Memory change error)

A Parity-Check of memory contents is carried out:
- during switch ON voltage supply
- during switch to RUN-mode

If an error is detected,
- the program doesn´t run
- the error message E22 is displayed

Date of issue 03.02.1997

Appliction

Application form for Pepperl+Fuchs FC-21-V

Controlling for machine

File on cassette (file number / cassette number)

One Company, Two Divisions.

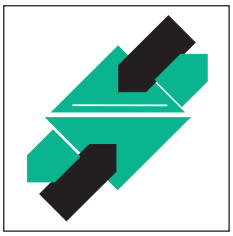
Factory Automation Division

Product Range

- Binary and analog sensors
- in different technologies
  - Inductive and capacitive sensors
  - Magnetic sensors
  - Ultrasonic sensors
  - Photoelectric sensors
- Incremental and absolute rotary encoders
- Counters and control equipment
- ID systems
- AS-Interface

Areas of Application

- Machine engineering
- Conveyor or transport
- Packaging and bottling
- Automobile industry



Process Automation Division

Product Range

- Signal conditioners
- Intrinsically safe interface modules
- Remote process interface
- Intrinsically safe field bus solutions
- Level control sensors
- Process measuring and control systems engineering at the interface level
- Intrinsic safety training

Areas of Application

- Chemical industry
- Industrial and community sewage
- Oil, gas and petrochemical industry
- PLC and process control systems
- Engineering companies for process systems

Service Area

Worldwide sales, customer service and consultation via competent and reliable Pepperl+Fuchs associates ensure that you can contact us wherever or whenever you need us. We have subsidiaries worldwide for your convenience.
