## Note

### Master-Slave operation

Master: SLC...-... (semiconductor)  
or SLC...-.../31 (relay)

Slave: SLC...-...-S

The use of slaves allows both the protection fields to be extended and protection fields to be created that do not all exist at a single level. When deciding which slaves to connect, remember that the total maximum of 96 beams must not be exceeded. Up to 192 beams are possible if the /130 option is selected.

Slaves exist for the transmitter and the receiver. These simply need to be connected to the master light curtain. Up to two slaves can be connected to both the transmitter and receiving units. Only one slave can be connected if the /130 option is selected.

Installation:

1. The end cap (no cable gland) on the light curtain is unscrewed and removed.
2. The plug-in jumper on the connectors of the now visible PCB is removed.
3. The slave is designed in such a way that the cap and PCB on the connecting cable plug directly onto the open end of the light curtain.
4. Once the end cap has been screwed on, the system is complete.
