

- Short design, 40 mm
- Function indicators visible from all directions
- Analog output 4 mA ... 20 mA
- Measuring window adjustable
- Program input
- Temperature compensation

Single head system

Dimensions

Technical Data

General specifications	
Sensing range	50 800 mm
Adjustment range	70 800 mm
Dead band	0 50 mm
Standard target plate	100 mm x 100 mm
Transducer frequency	approx. 255 kHz
Response delay	approx. 100 ms
Indicators/operating means	
LED green	Power on

UB-PROG2

Programming unit

OMH-04

Mounting aid for round steel ø 12 mm or sheet 1.5 mm ... 3 mm

Refer to "General Notes Relating to Pepperl+Fuchs Product Information"

BF 18 Mounting flange, 18 mm BF 18-F Plastic mounting adapter, 18 mm BF 5-30 Universal mounting bracket for cylindrical sensors with a diameter of 5 ... 30 mm V1-G-2M-PVC Female cordset single-ended M12 straight A-coded, 4-pin, PVC cable grey V1-W-2M-PUR Female cordset single-ended M12 angled A-coded, 4-pin, PUR cable grey UVW90-K18 Ultrasonic -deflector M18K-VE Plastic nuts with centering ring for the vibration-free mounting of cylindrical sensors

Programming procedure

The sensor features a programmable analog output with two programmable evaluation boundaries. Programming the evaluation boundaries and the operating mode is done by applying the supply voltage $-U_B$ or $+U_B$ to the Teach-In input. The supply voltage must be applied to the Teach-In input for at least 1 s. LEDs indicate whether the sensor has recognized the target during the programming procedure.

Note:

Evaluation boundaries may only be specified directly after Power on. A time lock secures the adjusted switching points against unintended modification 5 minutes after Power on. To modify the evaluation boundaries later, the user may specify the desired values only after a new Power On.

Note:

If a programming adapter UB-PROG2 is used for the programming procedure, button A1 is assigned to -UB and button A2 is assigned to +UB.

Programming the analog output

Rising ramp

- 1. Place the target at the near end of the desired evaluation range
- 2. Program the evaluation boundary by applying -U_B to the Teach-In input (yellow LED flashes)
- 3. Disconnect the Teach-In input from -UB to save the evaluation boundary
- 4. Place the target at the far end of the desired evaluation range
- 5. Program the evaluation boundary by applying +U_B to the Teach-In input (yellow LED flashes)
- 6. Disconnect the Teach-In input from +U_B to save the evaluation boundary

Falling ramp

- 1. Place the target at the far end of the desired evaluation range
- 2. Program the evaluation boundary by applying -U_B to the Teach-In input (yellow LED flashes)
- 3. Disconnect the Teach-In input from -UB to save the evaluation boundary
- 4. Place the target at the near end of the desired evaluation range
- 5. Program the evaluation boundary by applying $+U_B$ to the Teach-In input (yellow LED flashes)
- 6. Disconnect the Teach-In input from +UB to save the evaluation boundary

Installation Conditions

If the sensor is installed at places, where the environment temperature can fall below 0 °C, for the sensors fixation, one of the mounting flanges BF18, BF18-F or BF 5-30 must be used.

In case of direct mounting of the sensor in a through hole using the steel nuts, it has to be fixed at the middle of the housing thread. If a fixation at the front end of the threaded housing is required, plastic nuts with centering ring (accessories) must be used.
