

Light grid

- Automation light grid
- Optical resolution 8 mm
- Super-fast object detection, even with 3-way beam crossover
- Software-free adjustment of height monitoring
- Object identification using integrated object recognition
- IO-Link interface for service and process data
- Optional temperature range to

Automation light grid with beam spacing of 8 mm, IO-Link interface, push-pull output, fixed cable with M12 plug

Function

The LGS automation light grid series detects objects ranging in size from small to large. The very slender light grids have a modular design and come in different beam spacings and field heights. All signal evaluation takes place inside the unit. The lightweight systems can be integrated in their surroundings in a well-designed configuration, which means that machines and plants in temperature ranges between -30 °C ... +60 °C can be designed more compactly.

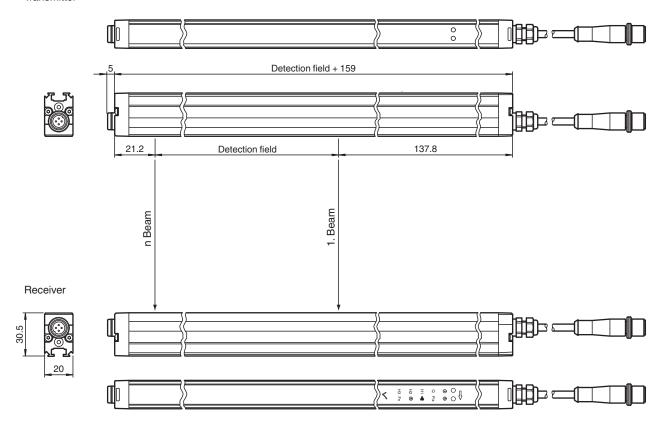

Application

- Detection of objects over large areas
- · Detecting and counting irregular objects
- · Measuring and sorting objects of different heights (height checking)
- Presence and overhang control in material handling systems
- · Web sag monitoring
- · Position or shape monitoring (object identification)

General specifications	
Effective detection range	Standard : 0.3 6 m Option /35: 0.5 8 m
Threshold detection range	Standard : 7.5 m Option /35: 10 m
Light source	IRED
Light type	modulated infrared light , 850 nm
Field height	see Table 1, max. 2100 mm
Beam crossover	Factory setting: three beam crossing, deactivateable
Beam blanking	adjustable max. 2 fixed suppressible beam areas (blanking)
Beam spacing	8.33 mm
Number of beams	see Table 1, max. 253
Operating mode	Emitter: Emitter power adjustable in two ranges
Optical resolution	without beam crossover: 8 mm with beam crossover: 4 mm with in 25% and 75% of the range
Opening angle	10 °
Ambient light limit	> 50000 Lux (if external light source is outside the opening angle)
Functional safety related parameters	
MTTF _d	21 a
Mission Time (T _M)	20 a
Diagnostic Coverage (DC)	60 %
Indicators/operating means	
Operation indicator	Power on: LED green, statically lit, Undervoltage indicator: Green LED, pulsing (approx. 0.8 Hz), short-circuit: LED green flashing (approx. 4 Hz)

Technical Data		
Function indicator		Emitter: Yellow LED, illuminates at high emitting power, off at low emitting power Receiver: Yellow LED: illuminates when an object is detected flashes when falling short of the operating reserve (4 Hz) Error message: Yellow LED flashes (8 Hz) in emitter and receiver
Control elements		Receiver: 2 touch buttons for programming
Parameterization indicator		IO link communication: green LED goes out briefly (1 Hz)
Electrical specifications		
Operating voltage	U _B	18 30 V DC
Ripple		10 %
No-load supply current	I ₀	Emitter ≤: 50 mA Receiver: ≤ 150 mA (without outputs)
Time delay before availability	t_{v}	see Table 1, max. 3.8 s
Interface		
Interface type		IO-Link
Protocol		IO-Link V1.0
Mode		COM2 (38.4 kBit/s)
Input		
Test input		Emitter switch-off with +UB or 0 V at pin 4 (emitter)
Function input		Range input activation from 1.6 m (or 2 m in case of option /35) with +UB or 0 V on pin 2 (emitter) Teach-In input for programming on pin 8 (receiver)
Output		reactivity programming on pinto (reactive)
Stability alarm output		Stability Control (SC) 1 PNP, short-circuit protected, reverse polarity protected on pin 2 (receiver)
Switching type		Factory setting: dark on , Switchable to light-on mode
Signal output		Switching output (detection field C/Q) 1 push-pull (4 in 1) output, short-circuit protected, reverse polarity protected on pin 4 (receiver), Height monitoring (H1, H2. H3) 3 push-pull (4 in 1) outputs, short-circuit proof, reverse polarity protected on pin 5, pin 6, pin 7 (receiver)
Switching threshold		Factory setting: The signal tracking for the threshold value is deactivated, increasing the optical resolution by a maximum of 4 mm; switchable to active signal tracking
Switching voltage		max. 30 V DC
Switching current		max. 100 mA
Voltage drop	U _d	≤2 V DC
Switching frequency	f	see Table 1, max. 118 Hz
Response time		see Table 1, max. 20 ms
Timer function		Off-delay programmable from 0 1.25 s in 5 ms steps (adjustment via IO-Link only)
Conformity		
Communication interface		IEC 61131-9
Product standard		EN 60947-5-2
Approvals and certificates		
Protection class		III (IEC 61140)
UL approval		cULus Listed
CCC approval		CCC approval / marking not required for products rated ≤36 V
Ambient conditions		
Ambient temperature		Standard : -10 60 °C (14 140 °F) Option /146: -30 60 °C (-22 140 °F)
Storage temperature		-30 70 °C (-22 158 °F)
Mechanical specifications		
Conductor cross section		min. 0.25 mm ²
Housing width		20 mm
Housing depth		30.5 mm
Housing length L		see Table 1, max. 2260 mm
Degree of protection		IP67
Connection		Emitter: connecting cable with 4-pin, M12 x 1 connector , 330 mm total length Receiver: connecting cable with 8-pin, M12 x 1 connector , 350 mm total length
Material		
Housing		extruded aluminum section, Silver anodized

Characteristic Curve

System Description

The light grid consists of a emitter and a receiver, between which is the area to be monitored.

The switching command is initiated by the entry or existence of a body/object in the monitoring field.

The modular system design supports a wide range of distances for the lines of light. Optimum implementation of the light grids for specific application requirements is thus possible.

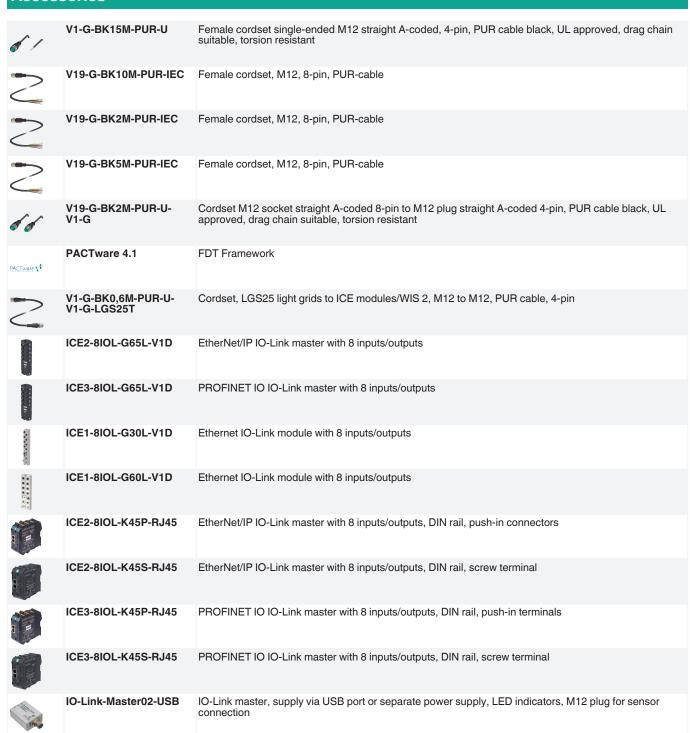

The system also has 3 switch outputs for height checking.

The system is programmed using the integrated touch field or the IO-Link interface.

Accessories

Design and function

Safety information

The device must only be operated with Safety Extra Low Voltage (SELV) with safe electrical disconnection. Intervention and repairs must only be carried out by your suppliers.

The system must be serviced and checked regularly.

A clean, soft cloth can be used for cleaning. Aggressive, abrasive cleaning agents that damage the surface must be avoided. The device must not be subjected to hard knocks or vibration.

Commissioning

Prerequisites

- The transmitter and receiver must be installed and aligned correctly.
- The electrical connection must be established according to the connection diagram.
- The signal output must respond to object detection.
- If at least one light beam is interrupted, the output remains active as long as the object is detected.

Fault location

- Measure operating voltage
- Check the cabling.
- Check the transmitter and receiver for dirt and clean if necessary.

Function displays

Behind the optics cover on the connection side of the profiles there is a green Power ON operating indicator LED and a yellow status display LED.

Transmitter

Function	Diagnostic description
Green operating indicator LED lights up statically	Power on
Green operating indicator LED is dark and yellow status indicator flashes	Power save mode
Yellow status indicator LED is dark	Transmitter with low transmitting power
Yellow status indicator LED lights up statically	Transmitter with high transmitting power
Yellow status indicator LED flashes quickly (approx. 8 Hz)	Error condition
Yellow status indicator LED light changes for short time	Test input is activated

Receiver

Release date: 2023-03-28 Date of issue: 2023-03-28 Filename: 232504_eng.pdf

Function	Diagnostic description
Green operating indicator LED lights up statically	Power on
Green operating indicator LED is dark	Power save mode
Green operating indicator LED flashes with brief interruption	IO-Link mode active, parameterisation only possible via IO-Link
Green operating indicator LED flashes (4 Hz)	Error condition: Short circuit at the outputs
Yellow status indicator LED lights up statically	Detection field interrupted
Yellow status indicator LED is dark	Detection field is enabled.
Yellow status indicator LED flashes (approx. 4 Hz)	Insufficient function reserve
Yellow status indicator LED flashes quickly (approx. 8 Hz)	Error condition: Incorrect signal measurement

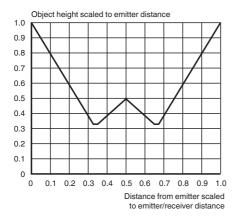

Resolution and beam clearance

The mechanical beam clearance determines the smallest detectable object size. Crossing the light beams increases the resolution of the light grid.

fa-info@sg.pepperl-fuchs.com

Resolution of the crossed beam arrangement

If three-way crossing of the beams is programmed, the resolution increases. For a three-way crossing, this means that the increased resolution is offered after 25 % of the transmitter range or receiver range. It must therefore be ensured that all objects pass transmitters or receivers with this clearance.

Type Code
