

Background suppression sensor ML100-8-H-5374/115/120/162

- Diffuse mode sensor with multiple light spots
- Specially designed for detecting critical objects such as PCBs
- Miniature design
- Detects objects in front of a close background through precise background suppression
- Can be adapted to the application in question thanks to the adjustable detection range
- Precision object detection, almost irrespective of the color
- Not sensitive to ambient light, even with switched energy saving

Diffuse mode sensor with special light spots for detecting PCBs, background suppression, miniature design, 100 mm detection range, red light, light/dark on, PNP outputs, fixed cable

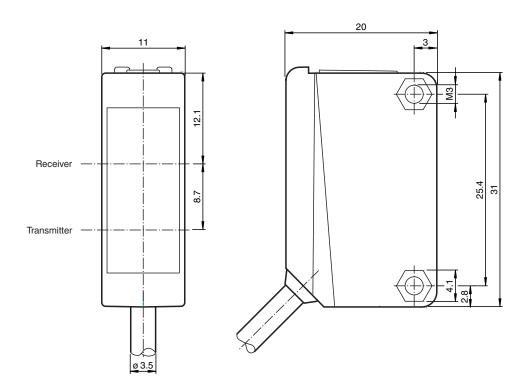

Function

The optical sensors of this series are suitable for both standard and demanding applications. The series features a miniature housing design, two M3 metal-threaded mounting holes and a highly visible LED status indicator. Each device is equipped with a sensitivity adjuster and a light-on/dark-on changeover switch for increased flexibility. A wide variety of versions are available in both infrared light and red light with PowerBeam for easy alignment. Special versions with BlueBeam are suitable for challenging applications like those in the solar and battery industries.

Dimensions

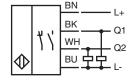

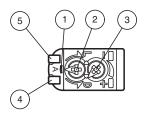

_					
		-	ıca	10	

General specifications			
Detection range	20 100 mm preset to 50 mm		
Detection range min.	10 25 mm		
Detection range max.	25 100 mm		
Adjustment range	25 100 mm		
Reference target	standard white, 100 mm x 100 mm		
Light source	LED		
Light type	modulated visible red light		
Polarization filter	no		
Black-white difference (6 %/90 %)	< 20 %		
Diameter of the light spot	3 light spots, spotsize 4 mm at a distance of 50 mm, spots are 8 mm apart; spotsize 2.5 mm at a distance of 80 mm, spots are 12 mm apart; spotsize 4 mm at a distance of 100 mm, spots are 15 mm apart (outer spot to outer spot)		
Optical face	frontal		
Ambient light limit	EN 60947-5-2:2007+A1:2012		
Functional safety related parameters			
MTTF _d	1100 a		
Mission Time (T _M)	20 a		
Diagnostic Coverage (DC)	0 %		
Indicators/operating means			
Operation indicator	LED green: power on		
Function indicator	LED yellow: lights when object is detected , flashes when in adjustment mode		
Control elements	Sensing range adjuster		

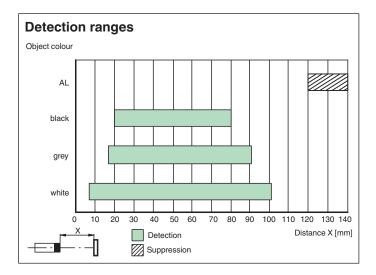

Technical Data		
Control alamanta		Limbs on/doub on about a suitab massatta doub on
Control elements		Light-on/dark-on changeover switch preset to dark-on
Electrical specifications		40 00 1/20
Operating voltage	U_B	10 30 V DC
Ripple		max. 10 %
No-load supply current	I ₀	< 15 mA
Output		
Switching type		The default setting is: dark-on
Signal output		2 PNP outputs, independent short-circuit protected, reverse polarity protected, open collector transistor
Switching voltage		max. 30 V DC
Switching current		max. 100 mA, resistive load
Voltage drop	U_d	≤ 1.5 V DC
Switching frequency	f	500 Hz
Response time		1 ms
Compliance with standards and directive	s	
Directive conformity		
EMC Directive 2004/108/EC		EN 60947-5-2:2007+A1:2012
Standard conformity		
Standards		UL 60947-5-2
Approvals and certificates		
UL approval		cULus Listed, Class 2 Power Source or listed Power Supply with a limited voltage output with (maybe integrated) fuse (max. 3.3 A according UL248), Type 1 enclosure
CCC approval		CCC approval / marking not required for products rated ≤36 V
Ambient conditions		
Ambient temperature		-30 60 °C (-22 140 °F)
Storage temperature		-40 70 °C (-40 158 °F)
Mechanical specifications		
Housing width		11 mm
Housing height		31 mm
Housing depth		20 mm
Degree of protection		IP67
Connection		2 m fixed cable
Material		
Housing		PC (Polycarbonate)
Optical face		PMMA
Mass		approx. 50 g
Tightening torque, fastening screws		0.6 Nm
Cable length		2 m

Configuration Information

Setting mode (A-Mode):

A-Mode is an additional switch position that is integrated into the light ON/dark ON switch. A-Mode is located between position L and position D. A-Mode is a help mode which enables you to detect whether all three light spots are directed onto the object. If A-Mode is selected, the yellow signal indicator LED flashes; the number of times that the LED flashes equates to the number of detected light spots.

The following scenarios exist:

- · No flashing/LED off: No light spots detected
- Fast flashing (8 Hz): One light spot detected
- · Slow flashing (4 Hz): Two light spots detected
- Static illumination/LED on: Three light spots detected

As soon as you exit A-Mode, the yellow LEDs light up in the standard manner again.

Switching output AND and OR

The sensor has three light spots, which the sensor evaluates individually. This permits a logical linking of the light spots. The logical linking of the light spots is available at the switching output as OR (Pin 4/BK) and AND (Pin 2/WH). Switching outputs:

If at least one of the three light spots provides an adequate receiving light strength from the detected object, the switching output switches to OR.

If all the light spots provide an adequate receiving light strength from the detected object, the switching output switches to AND.

Logical Linking	1. Light spot	2. Light spot	3. Light spot	Switching output
