

Digital Output with Shutdown Input FB6217E3

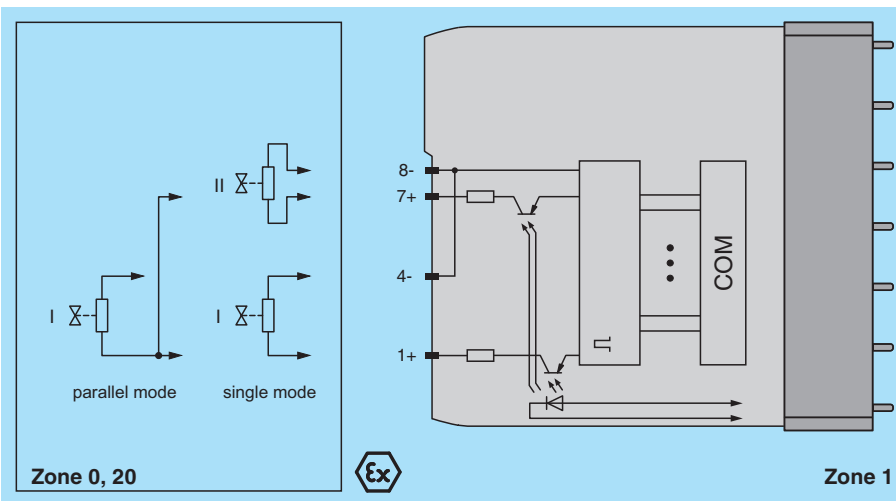

- 2-channel
- Outputs Ex ia
- Installation in suitable enclosures in Zone 1
- Module can be exchanged under voltage (hot swap)
- Line fault detection (LFD)
- Positive or negative logic selectable
- Simulation mode for service operations (forcing)
- Permanently self-monitoring
- Output with watchdog
- Output with bus-independent safety shutdown

Function

The digital output features 2 independent channels.
 The device can be used to drive solenoids, sounders, or LEDs.
 Open and short circuit line faults are detected.
 The outputs are galvanically isolated from the bus and the power supply.
 The output can be switched off via a contact. This can be used for bus-independent safety applications.
