

## Distance sensor

VDM28-15-L1-IO/110/115b/122

- Distance measurement using object
- Measuring method PRT (Pulse Ranging Technology)
- IO-Link interface for service and process data
- Analog output 0/4 mA ... 20 mA
- Accurate, clear, and reproducible measuring results
- Laser class 1, eyesafe

Universal distance sensor, measurement to object, IO-Link interface, measuring method: PRT, 15 m detection range, red laser light, laser class 1, push-pull output, analog output, fixed cable with M12 plug

**IO-Link**

### Function

The VDM28 distance measurement device employs Pulse Ranging Technology (PRT). It has a repeat accuracy of 5 mm with an operating range of 0.2 ... 15 m and an absolute accuracy of 25 mm.

The compact housing of the Series 28 photoelectric sensors, with dimensions of 88 mm (height), 26 mm (width) and 54 mm (depth), make it the smallest device available in its class.

### Dimensions

## Technical Data

### General specifications

Measurement range	0.2 ... 15 m
Reference target	Kodak white (90%)
Light source	laser diode typ. service life 85,000 h at Ta = +25 °C
Light type	modulated visible red light
Laser nominal ratings	
Note	LASER LIGHT , DO NOT STARE INTO BEAM
Laser class	1
Wave length	660 nm
Beam divergence	< 1.5 mrad
Pulse length	approx. 4 ns
Repetition rate	250 kHz
max. pulse energy	< 1.5 nJ
Angle deviation	max. ± 2°
Measuring method	Pulse Ranging Technology (PRT)
Diameter of the light spot	< 15 mm at a distance of 15 m at 20 °C
Ambient light limit	50000 Lux
Temperature influence	typ. ≤ 0.25 mm/K

### Functional safety related parameters

MTTF <sub>d</sub>	200 a
Mission Time (T <sub>M</sub> )	10 a
Diagnostic Coverage (DC)	0 %

### Indicators/operating means

Operation indicator	LED green
Function indicator	2 LEDs yellow for switching state
Teach-In indicator	Teach-In: LED green/yellow equiphase flashing; 2.5 Hz Teach Error: LED green/yellow non equiphase flashing; 8.0 Hz
Control elements	5-step rotary switch for operating modes selection (threshold setting and operating modes)
Control elements	Switch for setting the threshold values

### Electrical specifications

Operating voltage	U <sub>B</sub>	10 ... 30 V DC / when operating in IO-Link mode: 18 ... 30 V
Ripple		10 % within the supply tolerance
No-load supply current	I <sub>0</sub>	≤ 70 mA / 24 V DC
Time delay before availability	t <sub>v</sub>	1.5 s

### Interface

Interface type	IO-Link
Protocol	IO-Link V1.0
Cycle time	min. 2.3 ms
Mode	COM2 (38.4 kBit/s)
Process data width	16 bit
SIO mode support	yes

### Output

Signal output		Push-pull output, short-circuit protected, reverse polarity protected
Switching voltage		max. 30 V DC
Switching current		max. 100 mA
Measurement output		1 analog output 4 ... 20 mA, short-circuit/overload protected
Switching frequency	f	50 Hz
Response time		10 ms

### Conformity

Electromagnetic compatibility	EN 61000-6-2, EN 61000-6-4
Laser safety	IEC 60825-1:2007

### Compliance with standards and directives

Release date: 2024-03-18 Date of issue: 2024-03-18 Filename: 297896\_eng.pdf

Technical Data

Standard conformity		
Standards		
Measurement accuracy		
Absolute accuracy		± 25 mm
Repeat accuracy		< 5 mm
Approvals and certificates		
Protection class		III
UL approval		cULus Listed, Class 2 Power Source, Type 1 enclosure
CCC approval		CCC approval / marking not required for products rated ≤36 V
FDA approval		IEC 60825-1:2007 Complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated June 24, 2007
Ambient conditions		
Ambient temperature		-30 ... 55 °C (-22 ... 131 °F)
Storage temperature		-30 ... 70 °C (-22 ... 158 °F)
Mechanical specifications		
Degree of protection		IP67
Connection		300 mm fixed cable with M12 x 1, 4-pin connector
Material		
Housing		Plastic ABS
Optical face		PMMA
Mass		90 g
Dimensions		
Height		88 mm
Width		25.8 mm
Depth		54.6 mm

Connection Assignment

Application

Safety Information

Safety Information

**Laser Class 1 Information**  
The irradiation can lead to irritation especially in a dark environment. Do not point at people!  
Maintenance and repairs should only be carried out by authorized service personnel!  
Attach the device so that the warning is clearly visible and readable.  
Caution – Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

## Teach-In

You can use the rotary switch to select the relevant switching threshold A and/or B for teaching in for switching output **Q1**. The yellow LEDs indicate the current state of the selected output.

To store a switching threshold (distance measured value), press and hold the "SET" button until the yellow and green LEDs flash in phase (approx. 2 s). Teach-In starts when the "SET" button is released.

Successful Teach-In is indicated by alternating flashing (2.5 Hz) of the yellow and green LEDs.

An unsuccessful Teach-In is indicated by rapidly alternating flashing (8 Hz) of the yellow and green LEDs.

After an unsuccessful Teach-In, the sensor continues to operate with the previous valid setting after the relevant visual fault signal is issued.

Different switching modes can be defined by teaching in the relevant distance measured values for the switching thresholds A and B:

Every taught-in switching threshold can be retaught (overwritten) by pressing the SET button again.

Pressing and holding the "SET" button for > 5 s completely deletes the taught-in value. The yellow and green LEDs go out simultaneously to indicate that this procedure has been completed.

Minimum and maximum values for the analog output **Q2** are taught in in the same way as those for the switching output:

The following values apply: A = 4 mA

B = 20 mA

This provides three different options for operation:

**A < B -> rising slope**

**A > B -> falling slope**

**A empty -> zero start point**

### Reset to default settings:

Factory setting for switching output Q1:

- Switching output inactive

Factory setting for analog output Q2:

A = 200 mm

B = 5000 mm

Value B cannot be deleted

The "zero start point" operating mode can be obtained by deleting value A

- Set the rotary switch to the "RUN" position
- Press and hold the "SET" button until the yellow and green LEDs stop flashing in phase (approx. 10 s)
- When the green LED lights up continuously, the procedure is complete.

### Error messages:

- Short circuit: In the event of a short circuit at the sensor output, the green LED flashes with a frequency of approx. 4 Hz.

- Teach error: In the event of a teach error, the yellow and green LEDs flash alternately with a frequency of approx. 8 Hz.

**Note!**

The difference in the taught-in distance measured values for switching thresholds A and B must be greater than 20 mm.

If the difference in the taught-in measured values is the same as or smaller than the set switching hysteresis, the sensor will visually signal an unsuccessful Teach-In. The last distance measured value that was taught in will not be adopted by the sensor.

Select a new distance measured value for switching threshold A or B with a greater difference between the switching thresholds.

Teach in this distance measured value on the sensor again.

Switching threshold A can be deleted or set to a value of zero.

(E.g., when setting the "zero start point" curve).

However, switching threshold B can neither be deleted nor set to a value of zero.
