

Thru-beam sensor ML29-P/25/103/143

- Single-beam monitoring with extremely narrow sensor
- Integrated circuit
- Test
- Simple installation - Plug & Play
- Ideal for installation in door profiles or frames
- Light on version

Single-beam miniature sensor, ideal for installing in frames or door profiles

Function

The narrow miniature thru-beam sensors are a small and cost-effective solution, fitting in virtually any door frame. The ML29 and ML30 series offer fast, reliable detection at a distance of up to 8.5 m. The sensors are easy to mount on the profile, either using adhesive strips or a screw. A large opening angle ensures problem-free alignment. Several sensors can be mounted in a cross formation to offer multi-beam protection.

Application

- Person detection for automatic doors and gates
- Closing edge protection on sliding and revolving doors
- Threshold monitoring for elevator doors
- Step monitoring for doors on public transport vehicles
- Trigger function for restarting escalators

Dimensions

Technical Data

System components	
Emitter	ML29-T/143
Receiver	ML29-R/25/103/143
General specifications	
Effective detection range	0 ... 6 m
Threshold detection range	8.5 m
Light source	IRED
Light type	modulated infrared light
Opening angle	+/- 8 °
Optical face	lateral
Ambient light limit	40000 Lux
Functional safety related parameters	
MTTF _d	880 a
Mission Time (T _M)	20 a
Diagnostic Coverage (DC)	0 %
Indicators/operating means	
Function indicator	LED red in receiver : lights up when receiving the light beam
Electrical specifications	
Operating voltage	U _B 11 ... 30 V DC
No-load supply current	I ₀ Emitter: ≤ 25 mA Receiver: ≤ 10 mA
Input	

Release date: 2023-05-04 Date of issue: 2023-05-04 Filename: 129312_eng.pdf

Technical Data

Test input	Test: Transmitter switches off at +UB ≤ 5 V DC	
Output		
Switching type	light-on	
Signal output	1 PNP output, short-circuit protected, reverse polarity protected, open collector	
Switching voltage	max. 30 V DC	
Switching current	max. 0.1 A	
Switching frequency	f	100 Hz
Response time	5 ms	
Conformity		
Product standard	EN 60947-5-2	
Compliance with standards and directives		
Standard conformity		
Standards	EN 61000-6-2, EN 61000-6-3	
Approvals and certificates		
EAC conformity	TR CU 020/2011	
CCC approval	CCC approval / marking not required for products rated ≤36 V	
Ambient conditions		
Ambient temperature	-20 ... 60 °C (-4 ... 140 °F)	
Storage temperature	-20 ... 75 °C (-4 ... 167 °F)	
Relative humidity	90 % , noncondensing	
Mechanical specifications		
Degree of protection	IP65	
Connection	4-pin plastic connector, 6.5 mm diameter	
Material		
Housing	PMMA , black	
Optical face	Plastic pane	
Mass	per device 120 g	

Connection Assignment

○ = Light on
● = Dark on

Release date: 2023-05-04 Date of issue: 2023-05-04 Filename: 129312_eng.pdf

Connection Assignment

Wire colors in accordance with EN 60947-5-2

1	BN	(brown)
2	WH	(white)
3	BU	(blue)
4	BK	(black)

Assembly

Characteristic Curve

Release date: 2023-05-04 Date of issue: 2023-05-04 Filename: 129312_eng.pdf

Characteristic Curve

Accessories

	ML29 Front Plate	Front plate for thru-beam sensors in series ML29
	ML29 Kupplungsdose 6m 4polig	Female cordset with 6 m cable for ML29 series sensors
	ML29 Kupplungsdose 3m 4polig	Female cordset with 3 m cable for ML29 series sensors

Additional Information

Static detection:

The thru-beam sensor detects persons and objects independently of movement and surface structure for as long as the object breaks the detection beam.

		Electronic output
Light detection /25	Person in the beam	Inactive
	No person in the beam	Active
Dark detection /59	Person in the beam	Active
	No person in the beam	Inactive

Optics:

The relatively wide opening angles enable the light beam switches to be installed quickly, without alignment problems. Even if there is a light distortion of the installation profiles the function is retained.

Testing:

Testing is used to check the function of the light beam switch.

With supply voltage $+U_B < 5 V$ the emitter device is switched off. This simulates a light beam interruption. By means of this, the function of the light barrier can be tested easily without using a separate test input.

Installation:

Thanks to its small dimensions, the light beam can be fitted in a U-profile or behind a face panel. The hole diameter for both the emitter and the receiver is 8 mm.

Even fixing by means of the adhesive tape contained in the delivery package can be considered.

Installation of twin-beam arrangement:

A twin-beam version requires 2 emitters and receivers. Care should be taken that the beam separation is not less than 20 cm. The transmitters and receivers must be arranged in the form of a cross.

Release date: 2023-05-04 Date of issue: 2023-05-04 Filename: 129312_eng.pdf

Function Principle

The thru-beam sensor requires a pair of devices for operation, comprising a light transmitter and a light receiver. The emitter and receiver must be arranged in optical alignment with each other. The infrared light from the emitter is detected by the receiver and evaluated.
