- 1-channel isolated barrier
- 24 V DC supply (Power Rail)
- Resistance and RTD input (Pt100, Pt500, Pt1000)
- · Resistance output
- Accuracy 0.1 %
- Line fault detection (LFD) for Pt100
- · Housing width 12.5 mm

Function

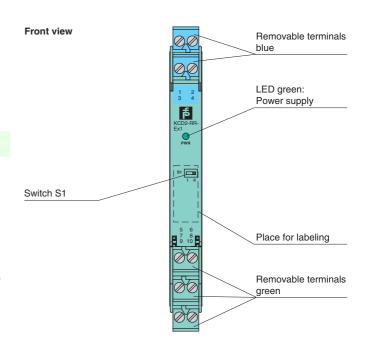

This isolated barrier is used for intrinsic safety applications.

It transfers resistance values of RTDs or potentiometers from hazardous areas to safe areas.

A 2-, 3-, or 4-wire technique is available depending on the required accuracy.

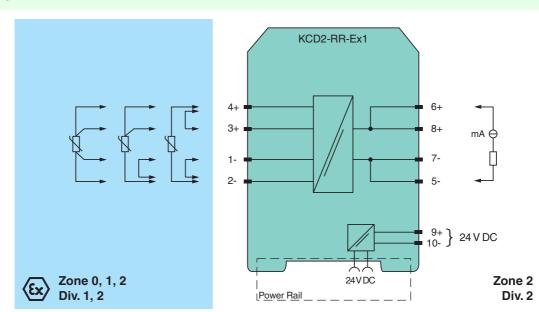

The input card of the control system measures the same load as if it were connected directly to the resistance in a hazardous

Connection

Release date 2019-05-28 13:42 Date of issue 2019-05-28 190247_eng.xml

General specifications		
Signal type		Analog input
Supply		
Connection		Power Rail or terminals 9+, 10-
Rated voltage	U_r	19 30 V DC
Ripple		within the supply tolerance
Rated current	l _r	< 20 mA
Power consumption	'r	0.35 W (24 V and 1 mA sense current)
		0.33 W (24 V and 1 ma sense current)
Input		Assessing to 4, 0, 0, 4
Connection		terminals 1, 2, 3, 4
Line fault detection		yes, at Pt100
Lead resistance		≤ 10 % of resistance value
Transmission range		0 10 mA
Available voltage		9 V
Line fault detection		50 nA
Output		
Connection		terminals 5-, 7-, 6+, 8+
Current		0 10 mA
Available voltage		07 V
y .		
Fault signal		< 10 Ω or > 400 Ω , depending on lead disconnected (measuring current \leq 1 mA)
Transfer characteristics		L > 1 mA + 0.10/ of D av + 0.10 (Abo I = =================================
Deviation		$I_m \ge 1$ mA: ±0.1 % of R_m or ± 0.1 Ω (the larger value is applicable)
		I_m < 1 mA: accuracy reduces in proportion to I_m . e. g. I_m = 0.1 mA: \pm 1 % of R_m or 1 Ω (the larger value is applicable).
Influence of ambient towns	roturo	
Influence of ambient temper	rature	I_m ≥ 1 mA, R_m ≥ 100 Ω: 0.01 %/K in the range -20 +60 °C (253 333 K) I_m < 1 mA or R_m < 100 Ω: temperature stability reduces in proportion to I_m or R_m
Diag time		
Rise time		signal response time \leq 2 ms (10 90 %) response to application of I_m : $R_m > 50 \Omega$ and $I_m < 5mA$: $< 5ms$
		response to application of I_m : $R_m > 30 \Omega$ and $I_m < 5 \text{mA}$: < 10ms
		response to application of I_m : $R_m > 18 \Omega$ and $I_m < 5mA$: < 20ms
Galvanic isolation		Toopenso to approach of the first to act and the contract of the
Input/Output		reinforced insulation acc. to EN 50178, rated insulation voltage 300 V _{eff}
• •		
Input/power supply		reinforced insulation acc. to EN 50178, rated insulation voltage 300 V _{eff}
Output/power supply		functional insulation, rated insulation voltage 50 V AC
Directive conformity

Directive conformity	
Directive 94/9/EC	EN 60079-0:2012+A11:2013 , EN 60079-11:2012 , EN 60079-15:2010
International approvals	
FM approval	
Control drawing	116-0129 (cFMus)
UL approval	
Control drawing	116-0332 (cULus)
IECEx approval	IECEx BAS 10.0024
	IECEx BAS 10.0025X
Approved for	[Ex ia Ga] IIC, [Ex ia Da] IIIC, [Ex ia Ma] I
General information	
Supplementary information	EC-Type Examination Certificate, Statement of Conformity, Declaration of Conformity, Attestation of Conformity and instructions have to be observed where applicable. For information see www.pepperlfuchs.com.
Accessories	
Designation	optional accessories: insertion bridge EBP 2- 5

Additional information

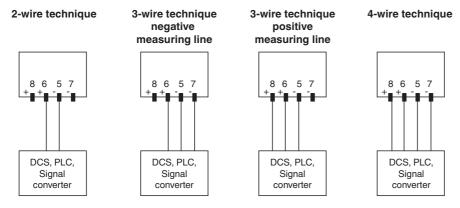

Function

When a signal converter, a DCS or PLC is connected to terminals 5, 6, 7, and 8 (control side), the measuring current is transferred to terminals 2 and 4 (field side). The resulting voltage at terminals 1, and 3 is transferred to terminals 5, 6, 7, and 8.

In the case of fast multiplex input cards, transmission problems might be experienced in connection with low resistance values and/or high sensor currents. For data see rise time.

The quoted accuracy is for a 4-wire technique connection. The accuracy in 3-wire technique will depend on the matching of the line resistance.

Connection types control side (safe area)

Connection types field side (hazardous area)

The resistance in the hazardous area can be measured with a 2-, 3- or 4-wire technique.

- · 2-wire technique:
 - Link terminals 1 and 2 and terminals 3 and 4. Connect the resistance to terminal 4 and terminal 2. Switch S1 in the position II.
- · 3-wire technique:
 - Link terminals 1 and 2. Connect the resistance to terminals 3 and 4 and terminal 2. Switch S1 in the position I.
- · 4-wire technique
 - Connect the resistance to terminals 3 and 4 and terminals 1 and 2. Switch S1 in the position II.

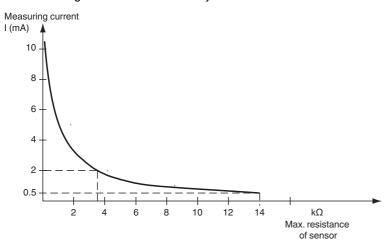

Measurement range

The resistance repeater can convey a maximum of 10 mA and a maximum of 7 V. The maximum connectable resistance value can be calculated with the following equations

- Resistance value = 7 V / measuring current
- Resistance value = 9 V / measuring current 758 Ω

Use the smaller of these two resistance values as maximum allowed load.

The measuring current is determined by control.

An example of the maximum transferable resistance value:

- 14 kΩ at 0.5 mA measuring current
- 3.5 kΩ at 2 mA measuring current

Line Fault Detection (LFD)

The output will indicate less than 10 Ω or greater than 400 Ω for a lead breakage at terminals 1, 2, 3 or 4 for measuring current of less than or equal to 1 mA i.e. out of range for Pt100.
