

Thru-beam sensor

BB10-P/25/33/76b/102/115-7m

- Single-beam miniature photoelectric sensor, ideal for installing in frames or contours
- Integrated circuit
- Plug-in style housing for 13 mm hole
- Narrow opening angle, suitable for mounting in pairs
- Light on version
- Version with test input

Miniature photoelectric sensor with plug-in style housing for mounting in 13 mm hole

Function

There is no simpler way of installing a sensor: drill the hole, clip in the sensor and you're done. What's more, the BB10 plug-in sensors for doors and turnstiles offer top performance at an extremely attractive price. The switching mechanism is integrated in the compact, self-contained and temperature-stable housing, making the BB10 suitable even for extremely cold regions with temperatures as low as -40°C.

Technical Data

Emitter	BB10-T/33/76b/115-7m	
Receiver	BB10-R/25/33/102/115-7m	
General specifications		
Effective detection range	0 ... 6 m	
Threshold detection range	8 m	
Light source	IRED	
Light type	modulated infrared light , 880 nm	
Diameter of the light spot	approx. 1300 mm at a distance of 6 m	
Angle of divergence	Emitter: +/- 8 ° Receiver: +/- 10 °	
Optical face	frontal	
Ambient light limit	halogen light 100000 Lux ; according to EN 60947-5-2:2007	
Functional safety related parameters		
MTTF _d	795 a	
Mission Time (T _M)	20 a	
Diagnostic Coverage (DC)	0 %	
Indicators/operating means		
Function indicator	LED red: lights up when receiving the light beam ; flashes when falling short of the stability control; OFF when light beam is interrupted	
Electrical specifications		
Operating voltage	U _B	10 ... 30 V DC
No-load supply current	I ₀	Emitter: ≤ 20 mA Receiver: ≤ 10 mA
Input		
Test input	emitter deactivation at 0 V	
Output		
Switching type	light on	
Signal output	1 NPN output, short-circuit protected, reverse polarity protected, open collector	
Switching voltage	max. 30 V DC	
Switching current	max. 100 mA	
Voltage drop	U _d	≤ 1.5 V DC
Switching frequency	f	62.5 Hz
Response time	8 ms	
Conformity		
Product standard	EN 60947-5-2	
Approvals and certificates		
CCC approval	CCC approval / marking not required for products rated ≤36 V	
UN/ECE Regulation No. 10 (E1)	Type-approval number: 036938	
Ambient conditions		
Ambient temperature	-40 ... 60 °C (-40 ... 140 °F) , fixed -20 ... 60 °C (-4 ... 140 °F) , movable	
Storage temperature	-40 ... 70 °C (-40 ... 158 °F)	
Relative humidity	90 % , noncondensing	
Mechanical specifications		
Degree of protection	IP67	
Connection	7 m fixed cable Receiver: grey ; Emitter: black	
Material		
Housing	PC , black	
Optical face	Plastic pane	
Mass	approx. 100 g per device	

Connection Assignment

Transmitter

Receiver

○ = Light on
● = Dark on

Assembly

Additional Information

Function:

The Series BB10 thru-beam sensor requires a pair of devices for operation, comprising a light transmitter and a light receiver. The transmitter and receiver must be arranged in optical alignment with each other. The infrared light from the transmitter is detected by the receiver and evaluated.

Static detection:

The thru-beam sensor detects persons and objects independently of movement and surface structure for as long as the object breaks the detection beam.

		Electronic output
Light detection /25	Person in the beam	Inactive
	No person in the beam	Active
Dark detection /59	Person in the beam	Active
	No person in the beam	Inactive

Installation:

Thanks to its small dimensions, the light beam can be fitted in a U-profile or behind a face panel.

Sheet thickness [mm]	Hole diameter [mm]	
	13	13.5
1	OK	X
2	OK	OK
3	OK	OK

X = Mounting not possible

OK = Mounting possible

Installation of twin-beam arrangement:

A twin-beam version requires 2 transmitters and receivers.

When using thru-beam sensors with the same transmission frequency:

Ensure that the minimum beam distance is 20 cm and that the light source and receiver are arranged in a cross formation.

Function Principle

The thru-beam sensor requires two devices for operation; a light source and a light receiver. The light source and receiver must be optically aligned with one another in a single line. The infrared light emitted from the source is recorded by the receiver and evaluated.

The sensor detects both people and objects for as long as an object interrupts the detection beam, regardless of movement and surface structure.

Application

- Monitoring function for turnstiles
- Activation function for restarting escalators
- Monitoring of industrial gates
- Person detection for automatic doors and gates
