IMPORTANT NOTICE!

Install "1834981_WindowsCertificateUpdate.pfshell6" first!

If you perform an RM Shell 6 update on a device with version 6.0.7 (or older), the validation of the security certificate may fail. It is not required for devices with Internet access or RM Shell 6.0.8 and newer.

The installation of the "Windows Certificate Update" can be done either via the internal RM Shell mechanism or via VisuNet Control Center. Please see RM Shell 6 manual for details.

```
=====  
Release: 18-34444E  
Version: 6.0.8.4822  
Date:    2024-03-06

=====

Release: 18-34444
Version: 6.0.3.3821
Date: 2023-04-25
=====

New Features:

- New Smart Task Bar:
Displays a quick-access overview of essential functions, such as navigating back to the home screen, turning the on-screen keyboard on and off, task switcher, and allows you to quickly switch between remote connections
- Hybrid Management Mode:
Separation of the two user roles operator and administrator on the window level leads to increased security and simplification of system configuration by the administrator

Improved:

- User Interface:
The newly implemented dark mode provides an optimized user interface and an improved user experience
- AD integration:
Simplified integration of the device into an Active Directory (AD) by the administrator
- Simpler support:
Readable log files allow easier communication with support and faster resolution of support issues
