INVISIBLE PROTECTION

SENSORS FOR THE PROTECTION AND MOVEMENT OF PEOPLE AND VEHICLES
In all situations, Pepperl+Fuchs sensors offer non-contact safety that does not deviate from the task at hand. After all, there are definitely more pleasant contacts in life than with an automatic door.
It is hard to imagine modern everyday life without escalators, automatic pedestrian doors, industrial doors and elevators. They open automatically, detect obstacles, and react to approaching people and objects. Invisible systems protect us throughout day-to-day life. Pepperl+Fuchs' sensors are indispensable to the function and reliability of these systems.

INVISIBLE PROTECTION

Pepperl+Fuchs sensors ensure the secure operation of automatic pedestrian doors, industrial doors, escalators, and elevators. Applications include: activation, protection and monitoring of automatic doors, turnstiles, industrial doors, commercial and industrial gates start-up controls for escalators and safeguarding systems for the closing edges of elevator doors.

Sensor systems can be aligned optimally to meet the broadest range of requirements. Conditions for automatic doors in retail centers and shopping malls are quite different to those in hospitals or nursing homes. Different criteria define sensor technology on industrial doors or warehouse entries where there is a combination of vehicular and pedestrian traffic. On escape and emergency routes and with fire doors, however, safety regulations and maximum reliability take priority.

Here, safety is the most important aspect. Pepperl+Fuchs sensors are always developed to the most recent DIN safety standards and EN ISO/IEC norms. We also actively contribute to the committees that write these standards. In addition to personal protection, the relevant EMC guidelines are also taken into consideration so that with increasing use in modern building technology, electronic devices do not interfere with each other.

Our sensors install seamlessly and discretely for worry-free, automated operation.

Trust in INVISIBLE PROTECTION. When it has to work, you can rely on Pepperl+Fuchs' sensors.
Pepperl+Fuchs has one of the largest and most extensive ranges of industrial sensors that covers a broad spectrum of applications.
With distribution and manufacturing sites at all major points on the globe, Pepperl+Fuchs supplies all regional markets and enables Plug-and-Play sensor installation on-site.
Over 4,000 employees develop, produce and distribute products for automation in more than 30 countries and ensure that these continue to meet and exceed the constantly increasing market requirements.

An important field for sensors outside of industrial automation is automating doors, industrial gates, industrial gate systems and elevators. Automatic door systems rely on robust sensor systems to keep them working and keep them safe. From photoelectric sensors that can detect direction and differentiate between people and vehicles, light grids that monitor elevator doors and microwave motion detectors for sliding or swinging doors, to sensors that provide absolute positioning and protection against pinch points and collisions, Pepperl+Fuchs has a sensor to suit your needs. In fact, we have the largest and most diverse selection of sensor systems in the world.

Pepperl+Fuchs offers a range of innovative and marketable sensing technologies that are tailored to these applications. We’ve been supplying sensors to the door and elevator industry for over 25 years.

- We provide comprehensive advice.
- We always come to your site.
- We find a solution for your application.
- We provide a customized solution to meet your needs.
- Your satisfaction is our aim!

Trust in INVISIBLE PROTECTION.
When it has to work, you can rely on Pepperl+Fuchs’ sensors.
## CONTENTS

### SENSORS FOR AUTOMATIC DOORS AND TURNSTILES
- Radar sensors
- Passive infrared scanners
- Active infrared area scanners
- Active infrared scanners
- Thru-beam sensors
- Retroreflective sensors
- Thru-beam light grids
- Inductive sensors

### SENSORS FOR DOORS IN PUBLIC TRANSIT
- Active infrared scanners
- Thru-beam sensors
- Ultrasonic sensors

### SENSORS FOR INDUSTRIAL DOORS
- Radar sensors
- Distance sensors
- Loop detectors
- Active infrared scanners
- Thru-beam sensors
- Retroreflective sensors
- Diffuse mode sensors
- Safety light grids
- Inductive slot sensors
- Inductive sensors

### SENSORS FOR ELEVATORS
- Radar sensors
- Active infrared area scanners
- Passive infrared scanners
- Thru-beam sensors
- Retroreflective sensors
- Thru-beam light grids
- Distance sensors
- Distance measurement sensors
- Safety light grids
- Photoelectric slot sensors
- Positioning systems
- Inductive slot sensors
- Rotary encoders
- Inductive sensors

### SENSORS FOR ESCALATORS AND MOVING WALKWAYS
- Radar sensors
- Thru-beam sensors
- Inductive sensors

### SENSORS FOR FIRE PROTECTION DEVICES
- Thru-beam sensors
- Retroreflective sensors

### SENSORS FOR COMMERCIAL AND INDUSTRIAL GATE SYSTEMS
- Distance sensors
- Loop detectors
- Active infrared scanners
- Retroreflective sensors
- Diffuse mode sensors
- Inductive sensors
Modern automatic doors with our non-contact sensors open every door safely and discreetly.

Trust in INVISIBLE PROTECTION. When it has to work, you can rely on Pepperl+Fuchs’ sensors.
When classifying sensor functionality we differentiate between the following door types:

**SLIDING DOORS**

**CONVENIENT AND SECURE OPERATION OF AUTOMATIC DOORS**

Convenience, as it relates to an automatic door, means that it opens independently, at the right time, every time. This falls under the responsibility of door activation sensors. They detect when someone approaches and activate the door-opening mechanism. Our motion sensors are equipped with adjustable detection areas and functions such as direction detection and cross-traffic suppression. This clearly enhances the functionality of automatic doors, preventing unnecessary opening and closing, increasing the service life of the door mechanism, and saving costs on heating and air conditioning. Our sensors are robust, tamperproof, immune to rain, vibration, and reflection, and simple to operate.

Safety is an essential concern for all forms of automation. When the automatic doors open and close, it is imperative that they do not hit anybody and cause injuries. Securing and monitoring closing door edges is a top priority. Sensors prevent the door from closing if people or animals stop in the area around the door. An automatic teach-in function continually adjusts the sensors to the ever-changing conditions of their surroundings and guarantees fault-free protection.

Optimum collision protection is particularly important with swinging and revolving doors. Here it is essential that people are detected when the doors are opened so the door can remain open if necessary. In addition to high-performance and more reliable detection, these sensors are particularly flexible and easy to operate. The detection characteristics can be individually aligned and continuously adjusted. In addition to stationary operation, they also operate when in motion, providing the option of being mounted on revolving or swinging doors.

With certification in accordance with DIN 18650 as category 2 testable, non-contact safety equipment (NCSE), Pepperl+Fuchs equipment offers maximum safety.

The product portfolio also includes sensors that fulfill the special requirements of public transit systems. They are certified and approved in accordance with rail standard EN 50155 or have E1 approval.

**SWINGING DOORS**

**REVOLVING DOORS**

**TURNSTILES**
**SENSORS FOR AUTOMATIC DOORS AND TURNSTILES**

**Series**

<table>

**Functioning principle**

- Radar sensors

**Description**

- Standard microwave motion sensor with basic functionality
- Premium microwave motion sensor with additional intelligent functions
- Premium microwave motion sensors with integrated self-monitoring for escape and exit routes

**Function**

- Opening

**Application**

- Detection area

**Detection area**

- 4.5 m x 2 m/2 m x 4.5 m
- 2.5 m x 3.5 m
- 1.8 m x 2.6 m

**Technical specifications**

- Reliable movement detection of people and vehicles
- Adjustable sensitivity
- Modifiable detection area
- Direction monitoring
- Cross-traffic suppression
- Wall and ceiling mount
- Reliable movement detection of people and vehicles
- Easily programmable with DIP switch and 16 basic pre-programmed settings
- Direction monitoring
- Cross-traffic suppression
- Turtle mode
- Reliable movement detection for emergency and escape routes
- Self-monitoring
- Approved in accordance with AutSchR
- Remote controllable
- Direction monitoring
- Cross-traffic suppression
- Turtle mode
- Detect people by their thermal emission +/- 0.5 °C
- Operates only in the event of motion
- Compact design
- Precise and continuous adjustment of the detection field through aperture and zoom function
- Suitable for flush-mounting

**Detection area**

- 4.5 m x 2 m/2 m x 4.5 m
- 2.5 m x 3.5 m
- 1.8 m x 2.6 m

**Installation height**

- Max. 4 m
- Max. 3 m
- Max. 5 m

**Operating voltage**

- 12 to 36 V DC/12 to 38 V AC
- 12 to 36 V DC
- 12 to 30 V DC/12 to 24 V DC

**Switching output**

- Relay
- Relay
- Relay/voltage/frequency

**Operating temperature**

- -20 °C to 60 °C
- -20 °C to 60 °C
- -20 °C to 60 °C

**Connection**

- Connector strip with 2.5 m connecting cable
- Connector strip with 5 m connecting cable
- Connector strip with 3 m connecting cable
- Screw terminals

**Dimensions**

- 101 mm x 60 mm x 59 mm
- 123 mm x 65 mm x 57 mm
- 123 mm x 65 mm x 57 mm
- 56 mm x 23 mm x 45 mm

**Versions**

- Mono (no direction detection)
- Stereo with direction detection)
- Extra wide detection area
- Remote controllable
- FCC approval for North America
- Black housing
- White housing
- Silver housing
- Black housing
- White housing

### Versions

- **Test input**
- **PNP output**
- **NPN output**
- **Operating voltage DC**
- **Operating voltage AC/DC**
- **Adjustable time between teach cycles**

### Set Features

- Background suppression (-H)
- Background evaluation (-HW)
- Counter function and direction detection (CLS)
- Operating voltage DC with NPN/1PNP output
- Operating voltage DC with 2 PNP outputs
- Operating voltage AC/DC with relay output
- Light-on or dark-on switching
- Quick disconnect or fixed cable connection

### Set Features

- Background suppression (-H)
- Background evaluation (-HW)
- Operating voltage DC with 1 PNP output
- Operating voltage AC/DC with relay output
- Light-on
- Light-on/dark-on selectable
- Test input
- Flush-mounted version

## Functional principle

### Retroreflective sensor

- Thru-beam light grids

### Thru-beam light grids

- Light grid for monitoring large areas
- Light grid with fine resolution for detecting people and objects
- Light grid with long sensing range for detecting people and objects

## Description

**Single-beam miniature photoelectric sensor with long detection range for detecting people and objects**

**Single-beam M18 cylindrical sensor for detecting people, objects, and vehicles**

**Light grid for monitoring large areas**

**Light grid with fine resolution for detecting people and objects**

**Light grid with long sensing range for detecting people and objects**

## Function

Monitoring

## Application

**Detection area**

- Diameter of the light spot: 500 mm at 7 m
- Diameter of the light spot: 250 mm at 6.5 m
- Field height max. 3 m
- Field height 1.8 m
- Field height 1.65 m
- Sensing range: max. 7 m / max. 9 m
- Sensing range: 6.5 m or 8 m
- Sensing range: max. 6 m or 8 m
- Sensing range: max. 3.5 m
- Sensing range: max. 5.6 m
- Operating voltage: 10 to 30 V DC GLV18: 10 to 30 V DC
- Operating voltage: 18 to 30 V DC
- Switching output: 1 PNP or 1 NPN
- Switching output: 1 push-pull output for detection field and 3 push-pull outputs for height control
- Switching output: -10 °C to 60 °C (optionally to -30 °C)
- Switching output: -10 °C to 55 °C
- Switching output: -10 °C to 60 °C

**Installation height**

- Sensing range: max. 7 m / max. 9 m
- Sensing range: 6.5 m or 8 m
- Sensing range: max. 6 m or 8 m
- Sensing range: max. 3.5 m
- Sensing range: max. 5.6 m
- Operating voltage: 10 to 30 V DC GLV18: 10 to 30 V DC
- Operating voltage: 18 to 30 V DC
- Switching output: 1 PNP or 1 NPN
- Switching output: 1 PNP/NPN
- Switching output: 1 PNP/1 NPN
- Switching output: 1 PNP/NPN

**Operating temperature**

- -30 °C to 60 °C
- -20 °C to 60 °C
- -10 °C to 60 °C
- -10 °C to 60 °C

**Connection**

- Fixed cable
- Fixed cable or M8 quick disconnect (pigtail)
- Fixed cable with M12 quick disconnect (pigtail)
- Fixed cable or M8 quick disconnect
- Fixed cable or M12 pigtail

**Dimensions**

- 11 mm x 31 mm x 20 mm
- M18 x 44 mm or M18 x 60 mm
- 20 mm x 30.5 mm x field height + 159 mm
- 9 mm x 34 mm x 2 m
- Profile width x 30 mm x 2 m

**Versions**

- Version without polarisation filter (-6)
- Version with polarisation filter (-55)
- Front lens orientation with 8 m sensing range
- Side lens orientation (-S) with 6.5 m sensing range
- Operating voltage DC with PNP output
- Operating voltage DC with 2 PNP outputs
- Operating voltage AC/DC with MOSFET output
- Quick disconnect
- Fixed cable connection
- Version with ATEX approval for zone 2 and 22 (TÜV 08 ATEX 554855 X)
- Profile width 12 mm (ALXX12)
- Profile width 16 mm (ALXX16)
- Beam gap 20 to 44 mm (AL20XX)
- Beam gap 40 to 88 mm (AL40XX)
- Pigtail connector
- Fixed cable connection

</table>
Should the industrial door open only for vehicles or for people as well? Our sensors can be programmed to detect vehicles or people, ensuring secure and effective automatic industrial doors. Trust in INVISIBLE PROTECTION and customise your industrial door sensing requirements.
MORE EFFECTIVE AND SECURE OPERATION OF AUTOMATIC INDUSTRIAL DOORS

It is important to guarantee convenient and secure operation with automatic industrial doors. Is it also important to have an effective opening and closing function that supports the operation and logistics as much as possible. Several sensor systems are available for automatic opening that are tailored to the particular requirements in this area. The compact, powerful, and extremely robust sensors are ideal for high mounting locations or long sensing distances, and they are easy to install. They come with simple setting options, hassle-free setup and low-maintenance operation. Configurable detection fields and sensing ranges enable adjustment to a vast range of door dimensions. Mounting heights of up to seven meters are no problem.

The door sensors have the ability to differentiate between pedestrians and vehicles. An optional extra is for the industrial door to open only on the approach of a vehicle not a pedestrian.

The issue of security is also extremely important with automatic doors. With any up or downward movements of the door, appropriate proper sensor system eliminates the risk of injury at the closing edges.

Also available are robust door sensors with a range of operating principles that are not affected by adverse conditions. With long sensing ranges and a variety of adjustment options, they provide automatic low-cost protection for entry routes.

This product area is rounded off with end position controls for the actuators. Pepperl+Fuchs offers a range of inductive sensor solutions in a wide variety of models.

When classifying sensor functionality we differentiate between the following gate types:

**ONE-PIECE, LIFT-UP DOORS**

**SWING DOORS**

**SECTIONAL DOORS**

**HIGH-SPEED DOORS**
## Functional principle
**Radar sensors**

## Description
Premium door openers with differentiated person and vehicle detection

## Function
Opening

## Application

| Detection area | 7 m x 6 m at installation height of 5 m / 8 m x 5 m at installation height of 7 m |

## Technical specifications
- Sensor differentiates between person/vehicle detection and opens the door depending on the situation
- Extra wide detection area and long sensing range
- Programmable, also available with remote control
- Direction monitoring
- Sensing range 50 m (only to reflector)
- Sensing range 15 m
- Sensing range 8 m
- Laser class 1 or 2
- Push-pull and analog output
- 2 push-pull outputs
- Quick disconnect
- Fixed cable connection
- Operating voltage 24 V AC
- Operating voltage 24 V DC
- Operating voltage 115 V AC
- Operating voltage 230 V AC
- 1 loop channel
- 2 loop channels
- Direction detection
- Installation height 2.5 m
- Installation height 6 m
- Operating voltage DC with NPN output
- Operating voltage DC with PNP output
- Operating voltage AC/DC with relay output
- Quick disconnect
- Fixed cable connection

## Installation height
Max. 7 m

## Operating voltage
12 to 36 V DC / 12 to 28 V AC

## Switching output
2 relay outputs

## Operating temperature
-20 °C to 60 °C

## Connection
Plug-in screw terminals with 8 m connecting cable

## Dimensions
123 mm x 65 mm x 57 mm

## Versions
- FCC approval for North America
- Black housing
- White housing
- Vehicle detection up to 60 km/h (40 mph) (version -HS)
### Functional principle
- Radar sensors
- Distance sensors
- Loop detectors
- Active infrared scanners

### Description
Premium door openers with differentiated person and vehicle detection
- Optical laser distance sensors for long sensing ranges, can be used in difficult ambient conditions
- Universal sensor system for detecting vehicles
- Precision sensor for very long detection range

### Function
- Opening
- Opening and protection
- Protection

### Application
- Detection area
- Technical specifications

#### Technical specifications
- Sensor differentiates between person/vehicle detection and opens the door depending on the situation
- Extra wide detection area and long sensing range
- Programmable, also available with remote control
- Direction monitoring
- Extremely resistant to interference due to direct Pulse Ranging Technology (PRT) measurement process
- Short response time
- High repeat accuracy
- Largely independent of measuring environment
- Not impaired by dust, fog, or extraneous light
- For low-temperature applications to -30 °C
- Complete control interface for wire loops laid in the floor
- Reliable detection of vehicles from long distances
- Various operating modes
- Test function
- Boost function to increase sensitivity
- Fault indications in the event of loop breaking or short circuit
- Choice of operating modes: Background suppression ignores objects beyond a selected area/background evaluation uses the background as reference to detect difficult targets
- Adjustable detection range and timer functions
- Test input for sensor function

#### Detection area
- VDM28: 7 m x 6 m at installation height of 5 m / 8 m x 5 m at installation height of 7 m
- Diameter of the light spot < 10 mm at 8 m
- Loop inductance 100 to 1000 µH
- Loop frequency 20 to 120 kHz
- Diameter of the light spot 50 mm at 2 m and 150 mm at 6 m

#### Sensing range
- LT2: 2 relay outputs
- Relay LT2: 2 PNP or 1 NPN/1 PNP
- LTK2: Relay
- Operating voltage 24 V AC
- Operating voltage 24 V DC
- Operating voltage 115 V AC
- Operating voltage 230 V AC
- 1 loop channel
- 2 loop channels
- Direction detection

#### Operating voltage
- 12 to 36 V DC / 12 to 28 V AC
- 10 to 30 V DC
- 24 V DC/115 V AC/230 V AC/24 V AC
- LK2: 15 to 35 V DC
- LTK2: 11 to 48 V DC/12 to 24 V AC
- Operating voltage 24 V AC
- Operating voltage 24 V DC
- Operating voltage 115 V AC
- Operating voltage 230 V AC
- 1 loop channel
- 2 loop channels
- Direction detection

#### Installation height
- Installation height 2.5 m
- Installation height 6 m
- Operating voltage DC with NPN output
- Operating voltage DC with PNP output
- Operating voltage AC/DC with relay output
- Quick disconnect
- Fixed cable connection

GLV18/GLK18 SERIES
- Retroreflective and thru-beam sensors
- Single-beam M18 cylindrical sensor for detecting people, objects and vehicles

28 SERIES/29 SERIES
- Retroreflective and thru-beam sensors
- Robust compact photoelectric sensor with long detection range for single-beam gate protection

31 SERIES
- Retroreflective and thru-beam sensors
- Basic photoelectric sensor with universal voltage for detecting people, objects and vehicles

- Sturdy plastic M18 housing
- Ideal for installation in door frames or profiles
- Flush installation mounting set available
- Straight or right-angled optical light exit
- Most compact and economic universal voltage device on the market
- Mounting equipment included with delivery

- Robust and waterproof housing with multiple mounting options
- Long sensing ranges
- No discernible interference emissions on any frequencies
- Immune to ambient lighting
- Particularly immune to interference from service radios and mobile phones

- Robust and waterproof ultrasonically welded housing
- Good optical service data despite narrow housing
- Very user-friendly with simple settings and alignment
- Immune to ambient lighting

Technical specifications

#### Technical specifications
- Robust and waterproof housing
- Adjustable timer functions and operation modes
- Sensitivity/test range adjuster
- Immune to ambient lighting
- Can be used in very low temperatures
- Protection field height of 200 mm to 2,400 mm
- Designs in type 2 (SLCT) or type 4 (SLCS) in accordance with EN ISO/IEC 61496-1
- Extremely slim housing
- Integrated evaluation
- Immune to ambient lighting
- Installable on three sides
- Very accurate switching points

- Slot width 15 mm (SJ15)
- Slot width 30 mm (SJ30)
- PNP output
- 2-wire AC NC contact
- 2-wire AC NO contact

**INDUCTIVE SENSORS**

Our range of inductive sensors for industrial gates can be found on pages 46/47.
When your foot is in the door, be on the safe side! Whether monitoring or positioning elevators – your protection is the number one priority. Trust in INVISIBLE PROTECTION and let us take you safely and comfortably to the next level.
CONTINUOUS MONITORING AND RELIABLE POSITIONING OF ELEVATORS

Your protection is paramount in this area. When operating elevators, it is essential that the elevator door does not collide with or injure passengers when closing.

Our narrow elevator light grid enables reliable protection in relation to elevator doors, passenger monitoring, and access control. The special features include dynamic beam crossing with up to 135 active beams, reliable object detection down to a distance of zero millimeters, and extremely high resistance to ambient light. These fulfill the demanding requirements of the popular glass elevators that are synonymous with modern architecture and innovative technology.

These systems continue to fulfill the most recent standards in accordance with EN81-70 and EN12016. These reliable light grid solutions not only provide convenience and protection for elevator passengers, they are also a cost-effective investment in terms of installation, setup, and maintenance. Typical fields of application include hotels, skyscrapers, shopping malls, hospitals, and retirement homes.

Single-beam sensors offer a simpler and more economic option for protecting the cab doors. The extra slim and yet robust housing enables mounting in the narrowest of gaps in door frames or other spaces. A selection of single-beam sensors in small housings or with a universal voltage supply are available.

A precise load-independent positioning of the elevator cab, soft braking, and smooth travel also add to the comfortable operation of elevators. With a broad range of sensor technologies, Pepperl+Fuchs can respond to the requirements of each individual application. The range extends from simple photoelectric slot sensors, rotary encoders, and special slot-type initiators to extremely precise distance measurement devices and positioning systems that are accurate to the millimeter - non-contact and comprehensive.

## Functional principle
Thru-beam light grids

## Description
Light grid with fine resolution for detecting people and objects

## Function
Protection

## Detection area
Field height 1.8 m

## Technical specifications
- Conformity to EN 81-70 and EN 12015/16
- Integrated controller
- Infrared light
- Extremely dense monitoring field with 135 beams and up to 7 times crossover
- Object detection up to “zero distance”
- Automatic adjustment of beam configuration
- Blanking of defective beams
- Insensitive to reflection and ambient light

## Detection area
Field height 1.8 m

## Sensing range
Max. 3.5 m

## Operating voltage
11 to 30 V DC

## Switching output
1 PNP/1 NPN

## Operating temperature
-10 °C to 55 °C

## Connection
Fixed cable or M8 quick disconnect

## Dimensions
9 mm x 34 mm x 2 m

## Versions
- Light-on
- Dark-on
- Quick disconnect
- Fixed cable connection
- Version with ATEX approval for zone 2 and 22 (TÜV 08 ATEX 554855 X)
**Series al2109**

**Functional principle**
- Thru-beam light grids
- Incident light positioning system
- Positioning systems

**Description**
- Light grid with fine resolution for detecting people and objects
- Light grid with high sensing range for detecting people and objects
- Reliable position detection system with 2D code tape and the latest camera technology
- Non-contact, absolute position detection system

**Function**
- Protection
- Opening and protection

**Technical specifications**
- Conformity to EN 81-70 and EN 12015/16
- Integrated controller
- Infrared light
- Extremely dense monitoring field with 135 beams and up to 7 times crossover
- Object detection up to 'zero distance'
- Automatic adjustment of beam configuration
- Blanking of defective beams
- Dense sensor field enables detection of small objects
- Automatic adjustment of beam configuration for maximum resolution
- Operation and status LEDs
- Insensitive to reflection and ambient light
- Blanking of defective beams
- Absolute positioning system on 2 axes
- Noncontact, silent, and wear-free
- Output of position, speed and other customer information
- Extremely reliable positioning using Data Matrix codes
- Self-adhesive code strip for fast installation
- Absolute and non-contact measurement
- Optimized for control and elevator systems
- Reliable position calculation at object speeds of up to 12.5 m/s
- Output of position and speed
- Slip-free system
- Self-diagnostics and automatic dirty/dusty lens recognition

**Detection area**
- Field height 1.65 m
- Field height 1.8 m
- Read field: 40 mm x 25 mm
- Measuring length: Max. 327 m
- Max. 5.6 m
- Read distance: 80 mm
- 12 to 30 V DC
- 15 to 30 V DC
- 10 to 30 V DC
- 1 PNP/1 NPN
- 1 to 3 switching outputs, PNP
- -10 °C to 60 °C
- -10 °C to 40 °C
- 0 to 60 °C
- Fixed cable or M12 pigtail
- M12 quick disconnect
- M12 quick disconnect
- Profile width x 30 mm x 2 mm
- 70 mm x 70 mm x 50 mm
- 90 mm x 99 mm x 115 mm
- Profile width 12 mm (ALXX12)
- Profile width 16 mm (ALXX16)
- Beam gap 20 to 44 mm (AL20XX)
- Beam gap 40 to 88 mm (AL40XX)
- Pigtail connector
- Fixed cable connection
- Read head with RS422 and RS485 interface
- Data Matrix code strip up to 10 km long
- Read head with RS485 interface
- Stainless steel code rail up to 314.5 m long

**Versions**
- Light-on
- Dark-on
- Quick disconnect
- Fixed cable connection
- Version with ATEX approval for zone 2 and 22 (TÜV 08 ATEX 554855 X)
- Profile width 12 mm (ALXX12)
- Profile width 16 mm (ALXX16)
- Beam gap 20 to 44 mm (AL20XX)
- Beam gap 40 to 88 mm (AL40XX)
- Pigtail connector
- Fixed cable connection
- Read head with RS422 and RS485 interface
- Data Matrix code strip up to 10 km long
- Read head with RS485 interface
- Stainless steel code rail up to 314.5 m long

## Functional principle
- Distance sensors
- Distance measurement devices
- Photoelectric slot sensors
- Inductive slot sensors
- Inductive sensor

## Description
- Optical laser distance sensors for long sensing ranges, can be used in difficult ambient conditions
- Optical laser distance measurement devices for long sensing ranges for accurate positioning of elevator car
- Photoelectric slot sensor for non-contact and easy positioning of elevators
- Slot initiators for non-contact end position control
- Inductive compact sensors for non-contact detection of metallic objects

## Function
- Positioning

## Detection area

### Technical specifications
- Extremely resistant to interference due to direct Pulse Ranging Technology (PRT) measurement process
- Short response time
- High repeat accuracy
- Largely independent of measuring environment
- Not impaired by dust, fog, or extraneous light
- For low-temperature applications to -30 °C
- Noncontact position measurement with direct Pulse Ranging Technology (PRT) measurement process
- Ultrafast data acquisition
- Resistant to interference and ambient light
- Long sensing ranges
- SSI interface
- Simple configuration

### Detection area
- Diameter of the light spot < 10 mm at 8 m
- Diameter of the light spot approx. 15 cm at 50 m

### GL SERIES

**Photoelectric slot sensors**
- Photoelectric slot sensor for non-contact and easy positioning of elevators

**Inductive slot sensors**
- Slot initiators for non-contact end position control

**Inductive sensor**
- Inductive compact sensors for non-contact detection of metallic objects

### SJ15/SJ30 SERIES

**Photoelectric slot sensor**
- Non-contact and easy positioning of elevators

**Inductive compact sensors**
- Non-contact detection of metallic objects

### VARIKONT L

**Inductive sensor**
- Tool-free, quick mounting with new quick-clamping lever

### Functional principle

- Distance sensors
- Distance measurement devices
- Photoelectric slot sensors
- Inductive slot sensors
- Inductive sensor

### Description

- Optical laser distance sensors for long sensing ranges,
can be used in difficult ambient conditions
- Optical laser distance measurement devices for long sensing ranges for accurate positioning of elevator car
- Photoelectric slot sensor for non-contact and easy positioning of elevators
- Slot initiators for non-contact end position control
- Inductive compact sensors for non-contact detection of metallic objects

### Technical specifications

- Extremely resistant to interference due to direct Pulse Ranging Technology (PRT) measurement process
- Short response time
- High repeat accuracy
- Largely independent of measuring environment
- Not impaired by dust, fog, or extraneous light
- For low-temperature applications to -30 °C
- Noncontact position measurement with direct Pulse Ranging Technology (PRT) measurement process
- Ultrafast data acquisition
- Resistant to interference and ambient light
- Long sensing ranges
- SSI interface
- Simple configuration
- High switching frequency
- Simple electric installation as only one device needs to be wired
- No calibration of the optical axes required
- Robust and wear-free
- Immune to ambient lighting

### Detection area

- Slot widths: 10 mm/20 mm/30 mm/50 mm/80 mm/120 mm/220 mm
- Slot width 15 mm or 30 mm
- Flush sensing range: 20 mm
- Nonflush sensing range: 40 mm

### Mounting height/
Sensing range

- Sensing range 50 m to reflector
- Sensing range 8 m or 15 m to background

### Sensing range:

- 50 m
- 150 m
- 300 m

### Switching element function:

- PNP complimentary
- 2 push-pull outputs
- Quick disconnect
- Fixed cable connection

### Operating voltage

- 10 to 30 V DC
- 18 to 30 V DC
- 10 to 30 V DC or 20 to 253 V AC
- 10 to 30 V DC

### Switching output

- 1 push-pull output + analogue output
- 2 push-pull outputs
- 2 PNP in/outputs, independent
- 1 PNP or 2-wire AC
- 2-wire AC NC contact
- 2-wire AC NO contact

### Operating temperature

- -30 °C to 50 °C
- -10 °C to 60 °C
- -20 °C to 85 °C

### Connection

- M12 quick disconnect or fixed cable
- M8 quick disconnect
- Fixed cable
- M12 quick disconnect

### Dimensions

- 25.8 mm x 88 mm x 55 mm
- 170 mm x 140 mm x 100 mm
- 39.6 mm x 18 mm or 69 mm x 18 mm
- 48 mm x 30 mm x 60 mm (SJ15), 34mm x 51mmx 110mm (SJ30)
- 67 mm x 40 mm x 40 mm

### Versions

- Sensing range 50 m (to reflector)
- Sensing range 15 m
- Sensing range 8 m
- Laser class 1 or 2
- Push-pull and analog output
- 2 push-pull outputs
- Quick disconnect
- Fixed cable connection

### INDUCTIVE SENSORS

*Our range of inductive sensors for elevators can be found on pages 46/47.*

Do you want to restrict or allow access?
Trust in INVISIBLE PROTECTION and let us provide a non-contact solution for trouble-free and secure access.
EFFICIENCY AND SERVICE FOR ESCALATORS

Escalators make our day-to-day life easier. To reduce energy costs and save on wear, it is helpful if they stop or operate at a reduced speed when not in use. They should then start operation again as soon as someone steps on them. Our small standard photoelectric or motion sensors enable the escalators to automatically start as soon as people are detected.

COMMERCIAL AND INDUSTRIAL GATE SYSTEMS

Commercial and industrial gate systems provide optimal security and guarantee efficient control of entrance and exit areas. Various sensors and systems help in this regard as activation sensors and to monitor the gate closing areas.

PROTECTION WITH FIRE DOORS: IGNORES SMOKE AND DETECTS PEOPLE

Fire barriers such as fire doors and fire dampers are designed to prevent fires and smoke from spreading along corridors, passages or chutes. This kind of barrier usually remains permanently closed, but can stay open in exceptional cases if the protected route is used very frequently. However, an automatic closing mechanism with a safety monitor is then required. Pepperl+Fuchs’ multifunctional fire protection sensors offer greater reliability and a wider range of functions for applications of this nature. The Property Insurers Association has certified and approved these sensors in accordance with VdS test report FSA.
We get every escalator moving! With multifunctional sensors, INVISIBLE PROTECTION enables efficient start or acceleration of escalators following breaks in use.
### RADEC
- Radar sensors
- Standard microwave motion sensor with basic functionality
- Activation

### ML8 SERIES
- Thru-beam sensors
- Basic miniature photoelectric sensor for detecting people, objects, and vehicles
- Activation

### BB10
- Thru-beam sensors
- Miniature photoelectric photoelectric sensors in plug-in housing for 13 mm hole
- Activation

### Functional Principle
- **Radar sensors**
- **Thru-beam sensors**
- **Thru-beam sensors**

### Description
- Standard microwave motion sensor with basic functionality
- Basic miniature photoelectric sensor for detecting people, objects, and vehicles
- Miniature phototoelectric photoelectric sensors in plug-in housing for 13 mm hole

### Function
- Activation

### Technical Specifications
- **Sensor Aim**: Reliability movement detection of people and vehicles
- **Adjustable sensitivity**
- **Modifiable detection area**
- **Direction monitoring**
- **Cross-traffic suppression**
- **Wall and ceiling mountable**

### Detection Area
- **4.5 m x 2 m**
- Diameter of the light spot approx. 180 mm at 3.5 m

### Mounting Height/Sensing Range
- **Max. 4 m**
- Sensing range: max. 4.5 m
- Sensing range: max. 8 m

### Operating Voltage
- 12 to 36 V DC/12 to 38 V AC
- 10 to 30 V DC

### Switching Output
- Relay
- 1 PNP
- 1 NPN or 1 PNP

### Operating Temperature
- -20 °C to 60 °C
- -30 °C to 55 °C
- -40 °C to 60 °C

### Connection
- **Connector strip with 2.5 m connecting cable**
- M8 quick disconnect or fixed cable
- Fixed cable

### Dimensions
- 101 mm x 60 mm x 59 mm
- 23 mm x 31 mm x 11 mm
- 22 mm x 12.5 mm x 12.5 mm

### Versions
- Mono (no direction detection)
- Stereo (with direction detection)
- Black housing
- Silver housing
- White housing

### Additional Features
- **ML8 SERIES**
- Miniature design, robust and waterproof
- Ideal for installation in door frames or profiles
- Flexible mounting options

### BB10
- Very compact model
- Infrared light
- Integral circuit with no external control interface unit
- Narrow opening angle suitable for mounting in pairs
- Test input

### Test Output
- **DMO**
- **DMO**
- **DMO**

### Control Interface
- **Contact**
- **Contact**
- **Contact**

### Operation
- **PNP output**
- **NPN output**
- **Light on**
- **Dark on**
Fire doors close automatically in the event of a fire and can only be opened to leave the building. Our fire protection sensors ignore smoke and reliably detect people and objects. INVISIBLE PROTECTION provides reliable operation even in the event of a fire.

### Technical specifications

- Approval in accordance with VdS test report FSA and externally monitored manufacture
- In the event of fire, smoke is ignored but people and objects in smoke are reliably detected
- High contact protection
- Immune to ambient lighting
- Multiple device installation possible, no cross-talk

### Diameter of the light spot
- Approx. 70 mm at 2 m
- Approx. 50 mm at 3 m

### Sensing range
- Max. 2.1 m
- Thru-beam: max. 10 m
- Retroreflective: max. 3 m

### Operating voltage
- 10 to 30 V DC
- 12 to 240 V AC/DC

### Switching output
- 1 PNP and 1 NPN
- Relay

### Operating temperature
- -40 °C to 60 °C
- -40 °C to 60 °C

### Connection
- M12 quick disconnect (can be turned 90°)
- Terminal compartment with cage tension spring terminals

### Dimensions
- 41.5 mm x 49 mm x 15 mm
- 25.8 mm x 88 mm x 65.5 mm

### Versions
- Thru-beam sensor
- Retroreflective sensor

### 28 SERIES/29 SERIES
- Robust compact photoelectric sensor with long sensing range for detecting people, objects and vehicles
- Robust and waterproof housing with multiple mounting options
- Long sensing ranges
- No discernible interference emissions on any frequencies
- Immune to ambient lighting
- Particularly immune to interference from service radios and mobile phones

- Approx. 35 mm at 12 m
- Retroreflective: 14 m/21 m
- Sensor: 700 mm/2000 mm
- RL28: 24 V DC
- RLK29: 24 to 230 V AC/DC
- RL28: 2 PNP
- RLK29: Relay
- -20 °C to 60 °C or -40 °C to 60 °C (RL28)
- -25 °C to 55 °C
- Terminal compartment or M12 quick disconnect or fixed cable
- 25.8 mm x 88 mm x 54 mm
- 18 mm x 62 mm x 35 mm

### 31 SERIES
- Basic photoelectric sensor with universal voltage for detecting people, objects and vehicles
- Robust and waterproof ultrasoically welded housing
- Good optical service data despite narrow housing
- Very user-friendly due to simple settings and alignment
- Immune to ambient lighting

- Approx. 200 mm at 6 m
- Max. 12 m
- 24 to 240 V DC/12 to 240 V AC
- Relay
- -25 °C to 55 °C
- M12 quick disconnect or fixed cable
- 18 mm x 62 mm x 35 mm

### 61 SERIES
- Basic photoelectric sensor with universal voltage for detecting people, objects and vehicles
- Robust and waterproof housing
- Adjustable timer functions and operation modes
- Sensitivity/test range adjuster
- Immune to ambient lighting
- Can be used in very low temperatures

- Retroreflective sensor: approx. 350 mm at 18 m
- Diffuse mode sensors: 17 mm at 1 m
- Robust and waterproof ultrasonically welded housing
- Immune to ambient lighting
- Very user-friendly due to simple settings and alignment
- Immune to ambient lighting

- 45 mm x 74 mm x 49 mm
- Light-on
- Dark-on
- Supplied with mounting set and reflector
- Version with heated front lens (RL28)
- Retroreflective sensor
- Diffuse mode sensor, energetic
- Quick disconnect
- Fixed cable connection

**5GM AND 8GM SERIES**

- Inductive sensors
- Non-contact detection of metal objects
- End position control of electromechanical actuators
- Cylindrical housing with M5 or M8 thread
- Flush: 0.8 mm or 1.5 mm or 2 mm
  Non-flush: 2 mm

**12GM SERIES**

- Inductive sensors
- Non-contact detection of metal objects
- End position control of electromechanical actuators
- Cylindrical housing with M12 thread
- Flush: 2 mm or 4 mm
  Non-flush: 4 mm

**18GM SERIES**

- Inductive sensors
- Non-contact detection of metal objects
- End position control of electromechanical actuators
- Cylindrical housing with M18 thread
- Flush: 5 mm or 8 mm
  Non-flush: 8 mm

**30GM SERIES**

- Inductive sensors
- Non-contact detection of metal objects
- End position control of electromechanical actuators
- Cylindrical housing with M30 thread
- Flush: 10 mm or 15 mm
  Non-flush: 15 mm

- Several images of inductive sensors, showing different designs and configurations for use in automatic doors, elevators, escalators, and gate systems.
YOUR APPLICATION. OUR CHALLENGE.

PROCESS INTERFACES
- Intrinsically safe barriers
- Signal conditioners
- Fieldbus infrastructure
- Remote I/O systems
- HART interface solutions
- Wireless solutions
- Level measurement
- Purge and pressurization systems
- Industrial monitors and HMI solutions
- Explosion protection equipment
- Solutions with process interfaces

INDUSTRIAL SENSORS
- Proximity sensors
- Photoelectric sensors
- Industrial vision
- Ultrasonic sensors
- Rotary encoders
- Positioning systems
- Inclination and acceleration sensors
- AS-Interface
- Identification systems
- Logic control units
