Operating Instructions BA00382O/98/EN/17.12 71206945

# Pressure Transmitter LHC-M51, PPC-M51, LHCR-51, LHCS-51

Process Pressure Hydrostatic

With HART Electronics

Valid from software version: 01.00.zz

With regard to the supply of products, the current issue of the following document is applicable: The General Terms of Delivery for Products and Services of the Electrical Industry, published by the Central Association of the Electrical Industry (Zentralverband Elektrotechnik und Elektroindustrie (ZVEI) e.V.) in its most recent version as well as the supplementary clause: "Expanded reservation of proprietorship".

# 1 Safety Instructions

## 1.1 Designated use

The LHC-M51 and PPC-M51 is a pressure transmitter for measuring level and pressure. The LHCR-51 and LHCS-51 is a hydrostatic pressure sensor for measuring level and pressure. The manufacturer accepts no liability for damages resulting from incorrect use or use other than that designated.

## 1.2 Installation, commissioning and operation

The device is designed to meet state-of-the-art safety requirements and complies with applicable standards and EU regulations. If used incorrectly or for applications for which it is not intended, however, it can be a source of application-related danger, e. g. product overflow due to incorrect installation or configuration. For this reason, installation, connection to the electricity supply, commissioning, operation and maintenance of the measuring system must only be carried out by trained, qualified specialists authorized to perform such work by the facility's owner-operator. The specialist staff must have read and understood these Operating Instructions and must follow the instructions they contain. Modifications and repairs to the devices are permissible only if they are expressly approved in the Operating Instructions. Pay particular attention to the technical data and information on the nameplate.

## 1.3 Operational and process safety

Alternative monitoring measures have to be taken while configuring, testing or servicing the device to ensure the operational and process safety.

**A** WARNING Only disassemble the device in pressureless condition!

### 1.3.1 Hazardous areas (optional)

If using the measuring system in hazardous areas, the appropriate national standards and regulations must be observed. The device is accompanied by separate Ex documentation, which is an integral part of these Operating Instructions. The installation regulations, connection values and safety instructions listed in this Ex document must be observed.

Ensure that all personnel are suitably qualified.

#### 1.3.2 Functional Safety SIL (optional)

If using devices for applications with safety integrity, the Manual "Safety Integrity Level" must be observed thoroughly.

## 1.4 Notes on safety conventions and icons

In order to highlight safety-relevant or alternative operating procedures in the manual, the following conventions have been used, each indicated by a corresponding icon in the margin.

#### 1.4.1 Safety symbols

| Symbol      | Meaning   |
|-------------|---|
| DANGER      | <b>DANGER!</b>  |
| P0011189-EN | This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.                  |
| WARNING     | <b>WARNING!</b>   |
| P0011190-EN | This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.                   |
| P0011191-EN | <b>CAUTION!</b><br>This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury. |
| NOTICE      | <b>NOTE!</b>  |
| P0011192-EN | This symbol contains information on procedures and other facts which do not result in personal injury.                                    |

## 1.4.2 Electrical symbols

| Symbol | Meaning  |
|--------|--|
| (Ex)   | <b>Explosion-protected, type-examined equipment</b><br>If the device has this symbol embossed on its nameplate, it can be used in a hazardous area or a non-hazardous area, depending on the approval.   |
| EX     | <ul> <li>Hazardous area</li> <li>This symbol is used in the drawings of these Operating Instructions to indicate hazardous areas.</li> <li>Devices used in hazardous areas must possess an appropriate type of protection.</li> </ul>  |
| X      | <ul> <li>Safe area (non-hazardous area)</li> <li>This symbol is used in the drawings of these Operating Instructions to indicate non-hazardous areas.</li> <li>Devices used in hazardous areas must possess an appropriate type of protection. Cables used in hazardous areas must meet the necessary safety-related characteristic quantities.</li> </ul> |

| Symbol           | Meaning   |
|------------------|---|
|                  | <b>Direct current</b><br>A terminal to which DC voltage is applied or through which direct current flows.   |
| P0011197         |   |
| <b>P</b> 0011198 | Alternating current<br>A terminal to which alternating voltage (sine-wave) is applied or through which alternating<br>current flows.  |
| <br><br>P0011200 | Ground connection<br>A grounded terminal which, as far as the operator is concerned, is grounded via a grounding<br>system.   |
| P0011199         | Protective ground connection<br>A terminal which must be connected to ground prior to establishing any other connections.   |
| P0011201         | <b>Equipotential connection</b><br>A connection that has to be connected to the plant grounding system: This may be a potential equalization line or a star grounding system depending on national or company codes of practice |
| (t≧85°C          | Connecting cable immunity to temperature change<br>Indicates that the connecting cables have to withstand a temperature of 85 °C at least.  |

### 1.4.3 Symbols for certain types of information

| Symbol            | Meaning   |
|-------------------|---|
|                   | Reference to documentation                                  |
| Ĩ                 | Refers to the corresponding device documentation.           |
| P0011194          |   |
|                   | Reference to page   |
|                   | Refers to the corresponding page number.                    |
| P0011195          |   |
|                   | Reference to graphic  |
|                   | Refers to the corresponding graphic number and page number. |
| P0011196          |   |
| >                 | Series of steps   |
| 1., 2., 3         | Several steps   |
| $\hookrightarrow$ | Result of a sequence of actions                             |
|                   | Help in the event of a problem                              |
| ?                 |   |
| P0013562          |   |

#### 2 Identification

#### 2.1 **Device designation**

#### 2.1.1 Nameplate

#### NOTICE

- The MWP (maximum working pressure) is specified on the nameplate. This value refers to a reference temperature of 20 °C (68 °F) or 100 °F (38 °C) for ANSI flanges.
- The pressure values permitted at higher temperatures can be found in the following standards: - EN 1092-1: 2001 Tab. 18<sup>1</sup>
  - ASME B 16.5a 1998 Tab. 2-2.2 F316
  - ASME B 16.5a 1998 Tab. 2.3.8 N10276
  - JIS B 2220
- The test pressure corresponds to the over pressure limit (OPL) of the device = MWP x  $1.5^{2}$ .
- The Pressure Equipment Directive (EC Directive 97/23/EC) uses the abbreviation "PS". The abbreviation "PS" corresponds to the MWP (maximum working pressure) of the measuring device.
- With regard to their stability-temperature property, the materials 1.4435 and 1.4404 are grouped together under 1 13EO in EN 1092-1 Tab. 18. The chemical composition of the two materials can be identical.
- The equation does not apply for LHC-M51 with a 40 bar (600 psi) or a 100 bar (1500 psi) measuring cell. 2

#### Aluminium housing

#### 2.1.2 Identifying the sensor type

- In the case of gauge pressure sensors, the "Pos. zero adjust" parameter appears in the operating menu ("Setup"  $\rightarrow$  "Pos. zero adjust").
- In the case of absolute pressure sensors, the "Calib. offset" parameter appears in the operating menu ("Setup"  $\rightarrow$  "Calib. offset").

#### 2.2 Scope of delivery

The scope of delivery comprises:

- Device
- CD-ROM with documentation
- Optional accessories

Documentation supplied:

- Operating Instruction BA00382O and the Brief Operating Instructions can be found on the ٠ documentation CD provided.  $\rightarrow \blacksquare$  2, "Overview of Documentation" section.
- Brief Operating Instruction: KA01030O (LHC-M51, PPC-M51),
- KA01033O (LHCR-51, LHCS-51)
- Final inspection report
- Additional Safety Instructions for ATEX, IECEx and NEPSI devices
- Optional: factory calibration form, test certificates

04/2013 TDOCT-3000\_ENG 255823

## 2.3 CE mark, Declaration of Conformity

The devices are designed to meet state-of-the-art safety requirements, have been tested and left the factory in a condition in which they are safe to operate. The devices comply with the applicable standards and regulations as listed in the EC Declaration of Conformity and thus comply with the statutory requirements of the EC Directives. Pepperl+Fuchs confirms the conformity of the device by affixing to it the CE mark.

## 2.4 Registered trademarks

KALREZ, VITON, TEFLON Registered trademark of E.I. Du Pont de Nemours & Co., Wilmington, USA TRI-CLAMP Registered trademark of Ladish & Co., Inc., Kenosha, USA HART Registered label of the HART Communication Foundation, Austin, USA GORE-TEX<sup>®</sup> Registered trademark of W.L. Gore & Associates, Inc., USA

# 3 Installation

## 3.1 Incoming acceptance, transport, storage

#### 3.1.1 Incoming acceptance

- Check the packaging and the contents for damage.
- Check the shipment, make sure nothing is missing and that the scope of supply matches your order.

#### 3.1.2 Transport

#### 

- Follow the safety instructions and transport conditions for devices of more than 18 kg (39.69 lbs).
- Transport the measuring device to the measuring point in its original packaging or at the process connection.

#### 3.1.3 Storage

 The device must be stored in a dry, clean area and protected against damage from impact (EN 837-2).

Storage temperature range: See Technical Informations TI00436O (LHC-M51, PPC-M51) or TI00437O (LHCR-51, LHCS-51).

## 3.2 Installation conditions

### 3.2.1 Dimensions

 For dimensions, please refer to the Technical Informations TI00436O (LHC-M51, PPC-M51) or TI00437O (LHCR-51, LHCS-51), "Mechanical construction" section.
 See also → 2, "Overview of Documentation" section.

## 3.3 Installing pressure transmitters LHC-M51, PPC-M51

#### NOTICE

- Pepperl+Fuchs offers a mounting bracket for installing on pipes or walls.
  - $\rightarrow$  and pipe mounting (optional)".

#### 3.3.1 Installation instructions

#### NOTICE

If a heated pressure transmitter is cooled during the cleaning process (e. g. by cold water), a vacuum develops for a short time, whereby moisture can penetrate the sensor through the pressure compensation (1). If this is the case, mount the pressure transmitter with the pressure compensation (1) pointing downwards.

- Keep the pressure compensation and GORE-TEX<sup>®</sup> filter (1) free from contamination. ▶
- pressure transmitters without diaphragm seals are mounted as per the norms for a manometer (DIN EN 837-2). We recommend the use of shutoff devices and siphons. The orientation depends on the measuring application.
- Do not clean or touch process isolating diaphragms with hard or pointed objects.
- The device must be installed as follows in order to comply with the cleanability requirements of the ASME-BPE (Part SD Cleanability):

#### Pressure measurement in gases

Measuring arrangement for pressure measurement in gases

- Pressure transmitter
- 2 Shutoff device
- ▶ Mount the pressure transmitter with the shutoff device above the tapping point so that any condensate can flow into the process.

#### Pressure measurement in steams

Measuring arrangement for pressure measurement in steams 6  $\square$ 

- Pressure transmitter
- 1 Shutoff device
- 2 3 4 U-shaped siphon
- Circular siphon

▶

- ▶ Mount the pressure transmitter with siphon above the tapping point.
  - Fill the siphon with liquid before commissioning.
  - The siphon reduces the temperature to almost the ambient temperature.

#### **Pressure measurement in liquids**

- Measuring arrangement for pressure measurement in liquids
- Pressure transmitter 1
- 2 Shutoff device

7

▶ Mount the pressure transmitter with shutoff device below or at the same level as the tapping point.

#### Level measurement

8 Measuring arrangement for level

- Always install the pressure transmitter below the lowest measuring point.
- Do not mount the device in the filling curtain or at a point in the tank which could be affected by pressure pulses from an agitator.
- Do not mount the device in the suction area of a pump.
- The calibration and functional test can be carried out more easily if you mount the device downstream of a shutoff device.

#### **PVDF** interchangeable threaded boss

NOTICE A maintero

A maximum torque of 7 Nm (5.16 lbs ft) is permitted for devices with a PVDF interchangeable threaded boss. The thread connection may become loose at high temperatures and pressures. This means that the integrity of the thread must be checked regularly and may need to be tightened using the torque given above. Teflon tape is recommended for sealing the 1/2NPT thread.

#### Mounting with temperature isolator

Pepperl+Fuchs recommends the use of temperature isolators in the event of constant extreme medium temperatures which lead to the maximum permissible electronics temperature of +85 °C (+185 °F) being exceeded. To minimize the influence of rising heat, Pepperl+Fuchs recommends the device be mounted horizontally or with the housing pointing downwards.

The additional installation height also brings about a zero point shift of approx. 21 mbar (0.315 psi) due to the hydrostatic column in the temperature isolator. You can correct this zero point shift,  $\rightarrow \stackrel{\text{\tiny D}}{=} 27$ , "Function of the operating elements" or  $\rightarrow \stackrel{\text{\tiny D}}{=} 40$ , "Position zero adjustment".

#### 3.3.2 Seal for flange mounting

9 Mounting the versions with a flange

Process isolating diaphragm

Seal

2

The seal is not allowed to press against the process isolating diaphragm as this could affect the measurement result.

#### 3.3.3 Wall and pipe mounting (optional)

Pepperl+Fuchs offers a mounting bracket for installing on pipes or walls (for pipes from 1-1/4 in up to 2 in diameter).

Please note the following when mounting:

- Devices with capillary tubes: mount capillaries with a bending radius  $\geq$  100 mm (3.94 in).
- When mounting on a pipe, tighten the nuts on the bracket uniformly with a torque of at least 5 Nm (3.69 lbs ft).

#### 3.3.4 Assembling and mounting the "separate housing" version

10 🔽 "Separate housing" version

- 1 In the case of the "separate housing" version, the sensor is delivered with the process connection and cable ready mounted.
- Cable with connection jack
- Pressure compensation
- Connector
- 2 3 4 5 6 7 Locking screw
- Housing mounted with housing adapter, included Mounting bracket provided, suitable for pipe and wall mounting (for pipes from 1-1/4 in up to 2 in diameter)

#### Assembly and mounting

- Insert the connector (4) into the corresponding connection jack of the cable (2). 1.
- Plug the cable into the housing adapter (6). 2.
- З. Tighten the locking screw (5).
- 4. Mount the housing on a wall or pipe using the mounting bracket (7). When mounting on a pipe, tighten the nuts on the bracket uniformly with a torque of at least 5 Nm (3.6 lbs ft).

Mount the cable with a bending radius (r)  $\geq$  120 mm (4.72 in).

#### 3.3.5 LHC-M51, version prepared for diaphragm seal mount - welding recommendation

11 🕢 Version XSJ: prepared for diaphragm seal mount

- Hole for fill fluid
- 2 3 Bearing
- Setscrew
- See the "Welding recommendation" table below A1

Pepperl+Fuchs recommends welding on the diaphragm seal as follows for the "XSJ" version in feature "Process connections" in the order code up to, and including, 40 bar (600 psi) sensors: the total welding depth of the fillet weld is 1 mm (0.04 in) with an outer diameter of 16 mm (0.63 in). Welding is performed according to the WIG method.

| Consecutive<br>seam no.                | Sketch/welding groove<br>shape, dimension as<br>per DIN 8551 | Base material matching   | Welding process<br>DIN EN/ISO 24063 | Welding position | Inert gas,<br>additives                                 |
|--|--|--|-------------------------------------|------------------|---|
| A1<br>for sensors<br>⊴40 bar (600 psi) | <u>\$1 a0.8</u>  | Adapter made of<br>AISI 316L (1.4435)<br>to be welded to diaphragm<br>seal made of AISI 316L<br>(1.4435 or 1.4404) | 141                                 | РВ               | Inert gas Ar/H 95/5<br>Additive:<br>ER 316L Si (1.4430) |

#### Information on filling

The diaphragm seal must be filled as soon as it has been welded on.

- After welding into the process connection, the sensor assembly must be properly filled with a filling oil and sealed gas-tight with a sealing ball and lock screw. Once the diaphragm seal has been filled, the device display should not exceed 10 % of the full scale value of the cell measuring range at the zero point. The internal pressure of the diaphragm seal must be corrected accordingly.
- Adjustment/calibration:
  - The device is operational once it has been fully assembled.
  - Perform a reset. The device then has to be calibrated to the process measuring range as explained in the Operating Instructions.
  - Once the device has been switched on, the total reset code (7864) must be entered in the path: "Expert"  $\rightarrow$  "System"  $\rightarrow$  "Management"  $\rightarrow$  "Enter reset code (124)" ( $\rightarrow$   $\supseteq$  36, section "Resetting to factory settings (reset)"). The electronics then read all the specific sensor data out of the sensor electronics. The device then has to be calibrated to the process measuring range as explained in the Operating Instructions.

## 3.4 Installing pressure transmitter LHCR-51, LHCS-51

#### NOTICE

- The local display can be rotated in 90° stages.
- Pepperl+Fuchs offers a mounting bracket for installing on pipes or walls.  $\rightarrow \triangleq 17$ , section "Wall and pipe mounting (optional)".

### 3.4.1 General installation instructions

#### NOTICE

- Do not clean or touch process isolating diaphragms with hard or pointed objects.
- The process isolating diaphragm in the rod and cable version is protected against mechanical damage by a plastic cap.
- If a heated pressure transmitter is cooled during the cleaning process (e. g. by cold water), a vacuum develops for a short time, whereby moisture can penetrate the sensor through the pressure compensation (1). If this is the case, mount the pressure transmitter with the pressure compensation (1) pointing downwards.

- Keep the pressure compensation and GORE-TEX<sup>®</sup> filter (1) free from contamination.
- The device must be installed as follows in order to comply with the cleanability requirements of the ASME-BPE (Part SD Cleanability):

- When mounting rod and cable versions, make sure that the probe head is located at a point as free as possible from flow. To protect the probe from impact resulting from lateral movement, mount the probe in a guide tube (preferably made of plastic) or secure it with a clamping fixture.
- In the case of devices for hazardous areas, comply strictly with the safety instructions when the housing cover is open.
- The length of the extension cable or the probe rod is based on the planned level zero point. The height of the protective cap must be taken into consideration when designing the layout of the measuring point. The level zero point (E) corresponds to the position of the process isolating diaphragm.

Level zero point = E; top of the probe = L.

### 3.4.2 Seal for flange mounting

12 Mounting the versions with a flange

Process isolating diaphragm

2 Seal

The seal is not allowed to press against the process isolating diaphragm as this could affect the measurement result.

#### 3.4.3 Wall and pipe mounting (optional)

Pepperl+Fuchs offers a mounting bracket for installing on pipes or walls (for pipes from 1-1/4 in up to 2 in diameter).

In the case of pipe mounting

• The nuts on the bracket must be tightened uniformly with a torque of at least 5 Nm (3.69 lbf ft).

#### 3.4.4 Assembling and mounting the "separate housing" version

13 Separate housing" version

- 1 In the case of the "separate housing" version, the sensor is delivered with the process connection and cable ready mounted.
- 2 Cable with connection jack
- 3 Pressure compensation
- 4 Connector 5 Locking screw
- 6 Housing mounted with housing adapter, included
- 7 Mounting bracket provided, suitable for pipe and wall mounting (for pipes from 1-1/4 in up to 2 in diameter)

#### Assembly and mounting

- 1. Insert the connector (4) into the corresponding connection jack of the cable (2).
- 2. Plug the cable into the housing adapter (6).
- 3. Tighten the locking screw (5).
- 4. Mount the housing on a wall or pipe using the mounting bracket (7). When mounting on a pipe, tighten the nuts on the bracket uniformly with a torque of at least 5 Nm (3.69 lbf ft). Mount the cable with a bending radius (r)  $\geq$  120 mm (4,72 in).

#### Routing the cable (e.g. through a pipe)

You require the cable shortening kit.

#### 3.4.5 Supplementary installation instructions

#### Seal

LHCR-51, LHCS-51 with a G 1-1/2 thread:

When screwing the device into the tank, the flat seal has to be positioned on the sealing surface of the process connection. To avoid additional strain on the process isolating diaphragm, the thread should never be sealed with hemp or similar materials.

- LHCR-51, LHCS-51 with NPT threads:
  - Wrap Teflon tape around the thread to seal it.
  - Tighten the device at the hexagonal bolt only. Do not turn at the housing.
  - Do not overtighten the thread when screwing. Max. torque: 20 Nm to 30 Nm (14.75 lbf ft to 22.13 lbf ft)

#### Sealing the probe housing

- Moisture must not penetrate the housing when mounting the device, establishing the electrical connection and during operation.
- Always firmly tighten the housing cover and the cable entries.

rdoct-3000\_eNG 255823 04/2013

## 3.5 Closing the cover on the stainless steel housing

14 Closing the cover

The cover for the electronics compartment is tightened by hand at the housing until the stop. The screw serves as DustEx protection (only available for devices with DustEx approval).

## 3.6 Post-installation check

After installing the device, carry out the following checks:

- Are all screws firmly tightened?
- Are the housing covers screwed down tight?

#### 4 Wiring

#### 4.1 Connecting the device

Risk of electric shock and/or explosion in hazardous areas! In a wet environment, do not open the cover if voltage is present.

#### NOTICE

- When using the measuring device in hazardous areas, installation must comply with the corresponding national standards and regulations and the Safety Instructions or Installation or Control Drawings.
- A suitable circuit breaker has to be provided for the device in accordance with IEC/EN 61010.
- Devices with integrated overvoltage protection must be earthed.
- Protective circuits against reverse polarity, HF influences and overvoltage peaks are integrated.

#### The procedure

- 1. Check if the supply voltage matches the specified supply voltage on the nameplate.
- Switch off the supply voltage before connecting the device. 2.
- 3. Remove housing cover.
- 4. Guide cable through the gland. Preferably use twisted, screened two-wire cable.
- 5. Connect device in accordance with the following diagram.
- 6. Screw down housing cover.
- 7. Switch on supply voltage.

15 🔽 Electrical connection 4 mA to 20 mA HART

- Terminals for supply voltage and signal
- Test terminals
- 2 3 4 Grounding terminal

1

- Supply voltage: 11.5 V DC to 45 VDC (versions with plug connectors: 35 V DC)
- 5 External ground terminal

## 4.2 Connecting the measuring unit

### 4.2.1 Supply voltage

#### NOTICE

- When using the measuring device in hazardous areas, installation must comply with the corresponding national standards and regulations and the Safety Instructions or Installation or Control Drawings.
- All explosion protection data are given in separate documentation which is available upon request. The Ex documentation is supplied as standard with all devices approved for use in explosion hazardous areas.

| Electronic version      |   |  |
|-------------------------|---|--|
| 4 mA to 20 mA HART,     | 11.5 V DC to 45 V DC                      |  |
| for non-hazardous areas | (versions with plug-in connector 35 V DC) |  |

#### Taking 4 mA to 20 mA test signal

A 4 mA to 20 mA test signal may be measured via the test terminals without interrupting the measurement. To keep the corresponding measured error below 0.1 %, the current measuring device should exhibit an internal resistance of < 0.7  $\Omega$ 

#### 4.2.2 Cable specification

- Pepperl+Fuchs recommends using twisted, shielded two-wire cables.
- Terminals for wire cross-sections 0.5 mm<sup>2</sup> to 2.5 mm<sup>2</sup> (20 AWG to 14 AWG)
- Cable outer diameter: 5 mm to 9 mm (0.2 in to 0.35 in) depends on the used cable gland (see technical information)

18 Load diagram, Supply voltage 11.5 V DC to 45 V DC (versions with plug-in connector 35 V DC) for other types of protection and for uncertified device versions

R<sub>Lmax</sub> Maximum load resistance U Supply voltage

NOTICE

When operating via a handheld terminal or via a PC with an operating program, a minimum communication resistance of 250  $\Omega$ must be taken into account.

#### 4.2.4 Shielding/potential equalization

- A normal device cable suffices if only the analog signal is used. A shielded cable is
  recommended if using the HART protocol. Observe grounding concept of the plant.
- When using in hazardous areas, you must observe the applicable regulations. Separate Ex documentation with additional technical data and instructions is included with all Ex systems as standard. Connect all devices to the local potential equalization.

#### 4.2.5 Connecting handheld

Compact, flexible and robust industry handheld terminal for remote parametrization and measured value inspection via the HART current output (4 mA to 20 mA).

### 4.2.6 Connecting HART modem

The HART modem connects intrinsically safe transmitters with the HART protocol to a computer's USB port. This allows remote operation of the transmitter using **PACT***ware*<sup>™</sup> operating program. Power is supplied to the modem through the USB port.

# 4.3 Overvoltage protection (optional)

The device can be fitted with overvoltage protection. The overvoltage protection is mounted at the factory on the housing thread (M20x1.5) for the cable gland and is approx. 70 mm (2.76 in) in length (take additional length into account when installing).

The device is connected as illustrated in the following graphic.

### 4.3.1 Wiring

#### 4.3.2 Installation

## 4.4 Post-connection check

Perform the following checks after completing electrical installation of the device:

- Does the supply voltage match the specifications on the nameplate?
- Is the device connected as per section 4.1?
- Are all screws firmly tightened?
- Are the housing covers screwed down tight?

As soon as voltage is applied to the device, the green LED on the electronic insert lights up for a few seconds or the connected local display lights up.

# 5 Operation

## 5.1 Operating options

## 5.1.1 Operation without operating menu

| Operating options                         | Explanation   | Graphic illustration | Description |
|---|---|----------------------|-------------|
| Local operation<br>without device display | The device is operated using<br>the operating keys and<br>DIP switches on the<br>electronic insert. |                      | → 🖹 26      |

## 5.1.2 Operation with operating menu

Operation with an operating menu is based on an operation concept with "user roles"  $\rightarrow \ge 28$ .

| Operating options                                 | Explanation   | Graphic illustration   | Description   |
|---|---|--|---------------|
| Local operation with device display               | The device is operated using<br>the operating keys on the<br>device display.          |  | → <b>≧</b> 30 |
| Remote operation via<br>HART handheld<br>terminal | The device is operated using the HART handheld terminal.                              |  | → <b>≧</b> 34 |
| Remote operation via<br>PACT <i>ware</i> ™        | The device is operated using the <b>PACT</b> <i>ware</i> <sup>™</sup> operating tool. | And the second sec | →È 34         |

#### 5.2 Operation without operating menu

#### 5.2.1 **Position of operating elements**

The operating keys and DIP switches are located on the electronic insert in the device.

HART electronic insert

1

1

- DIP switch for locking/unlocking parameters relevant to the measured value
- DIP switch for switching damping on/off DIP switch for alarm current SW/Alarm Min (3.6 mA)
- 2 3 4 DIP switch not used.
- 5 Slot for optional local display
- 6 7 Green LED to indicate successful operation
- Operating keys for lower range value (zero) and upper range value (span)

#### 5.2.2 Function of the DIP switches

| Switch | Symbol/        | Switch position   |   |  |
|--------|----------------|---|---|--|
|        | labeling       | "off"   | "on"  |  |
| 1      | <u> </u>       | The device is unlocked.<br>Parameters relevant to the measured value can be modified.   | The device is locked.<br>Parameters relevant to the measured value cannot be modified.                            |  |
| 2      | damping $\tau$ | Damping is switched off.<br>The output signal follows measured<br>value changes without any delay.  | Damping is switched on. The output signal follows measured value changes with the delay time $	au$ . <sup>1</sup> |  |
| 3      | SW/Alarm min   | The alarm current is defined by the setting in the operating menu.<br>("Setup" $\rightarrow$ "Extended setup" $\rightarrow$<br>"Curr. output" $\rightarrow$ "Output fail mode") | The alarm current is 3.6 mA regardless of the setting in the operating menu.                                      |  |

The value for the delay time can be configured via the operating menu ("Setup"  $\rightarrow$  "Damping"). Factory setting:  $\tau = 2 \text{ s or as per order specifications.}$ 

#### 5.2.3 Function of the operating elements

| Operating key(s)                               | Meaning  |
|--|--|
| "Zero"   | Get LRV  |
| pressed for at least 3 seconds                 | "Pressure" measuring mode  |
|  | - The pressure present is accepted as the lower range value (LRV).                                       |
|  | "Level" measuring mode, "In pressure" level selection,     "Wet" calibration mode                        |
|  | <ul> <li>The pressure present is assigned to the lower level value<br/>("Empty calibration").</li> </ul> |
|  | NOTICE   |
|  | No function is assigned to the key if level selection = "In height" and/or calibration mode = "Dry".     |
| "Span"   | Get URV  |
| pressed for at least 3 seconds                 | "Pressure" measuring mode  |
|  | - The pressure present is accepted as the upper range value (LRV).                                       |
|  | "Level" measuring mode, "In pressure" level selection,     "Wet" calibration mode                        |
|  | - The pressure present is assigned to the upper level value ("Full calibration").                        |
|  | NOTICE   |
|  | No function is assigned to the key if level selection = "In height"                                      |
|  | and/or calibration mode = "Dry".   |
| "Zero" and "Span"                              | Position adjustment  |
| pressed simultaneously for at least            | The sensor characteristic curve is shifted such that the pressure  |
| 3 seconds                                      | present becomes the zero value.  |
| "Zero" and "Span"                              | Reset  |
| pressed simultaneously for at least 12 seconds | All parameters are reset to the order configuration.   |

#### 5.2.4 Locking/unlocking operation

Once you have entered all the parameters, you can lock your entries against unauthorized and undesired access.

NOTICE

If operation is locked by means of the DIP switch, you can only unlock operation again by means of the DIP switch. If operation is locked by means of the operating menu, you can only unlock operation again using the operating menu.

#### Locking/unlocking via DIP switches

DIP switch 1 on the electronic insert is used to lock/unlock operation.

 $\rightarrow$   $\ge$  26, section "Function of the DIP switches".

## 5.3 Operation with an operating menu

## 5.3.1 Operation concept

The operation concept makes a distinction between the following user roles:

| User role                       | Meaning  |
|---------------------------------|--|
| Operator                        | Operators are responsible for the devices during normal "operation". This is usually limited to reading process values either directly at the device or in a control room. If the work with the devices extends beyond value read-off tasks, the tasks involve simple, application-specific functions that are used in operation. Should an error occur, these users simple forward the information on the errors but do not intervene themselves. |
| Service engineer/<br>technician | Service engineers usually work with the devices in the phases following device<br>commissioning. They are primarily involved in maintenance and troubleshooting activities<br>for which simple settings have to be made at the device.<br>Technicians work with the devices over the entire life cycle of the product.<br>Thus, commissioning and advanced settings and configurations are some of the tasks<br>they have to carry out.            |
| Expert                          | Experts work with the devices over the entire product life cycle, but their device requirements are often extremely high. Individual parameters/functions from the overall functionality of the devices are required for this purpose time and again. In addition to technical, process-oriented tasks, experts can also perform administrative tasks (e. g. user administration).<br>"Experts" can avail of the entire parameter set.             |

## 5.3.2 Structure of the operating menu

| User role                       | Submenu         | Meaning/use   |
|---------------------------------|-----------------|---|
| Operator                        | Language        | Only consists of the "Language" parameter (000) where the operating language for the device is specified.<br>The language can always be changed even if the device is locked.   |
| Operator                        | Display/operat. | Contains parameters that are needed to configure the measured value display (selecting the values displayed, display format, display contrast, etc.).<br>With this submenu, users can change the measured value display without affecting the actual measurement.   |
| Service engineer/<br>technician | Setup           | <ul> <li>Contains all the parameters that are needed to commission measuring operations. This submenu has the following structure:</li> <li>Standard setup parameters <ul> <li>A wide range of parameters, which can be used to configure a typical application, is available at the start. The measuring mode selected determines which parameters are available.</li> <li>After making settings for all these parameters, the measuring operation should be completely configured in the majority of cases.</li> </ul> </li> <li>"Extended setup" submenu <ul> <li>The "Setup" submenu contains additional parameters for more indepth configuration of the measurement operation to convert the measured value and to scale the output signal.</li> <li>This menu is split into additional submenus depending on the measuring mode selected.</li> </ul> </li> </ul> |
| Service engineer/<br>technician | Diagnosis       | <ul> <li>Contains all the parameters that are needed to detect and analyze operating errors. This submenu has the following structure:</li> <li>Diagnostic list<br/>Contains up to 10 error messages currently pending.</li> <li>Event logbook<br/>Contains the last 10 error messages (no longer pending).</li> <li>Instrument info<br/>Contains information on the device identification.</li> <li>Measured values<br/>Contains all the current measured values</li> <li>Simulation<br/>Is used to simulate pressure, level, flow, current and<br/>alarm/warning.</li> <li>Reset</li> </ul>   |

| User role | Submenu | Meaning/use   |
|-----------|---------|---|
| Expert    | Expert  | <ul> <li>Contains all the parameters of the device (including those in one of the submenus). The "Expert" submenu is structured by the function blocks of the device. It thus contains the following submenus:</li> <li>System Contains all the device parameters that neither affect measurement nor integration into a distributed control system.</li> <li>Measurement Contains all the parameters for configuring the measurement.</li> <li>Output Contains all the parameters for configuring the current output.</li> <li>Communication Contains all the parameters for configuring the HART interface.</li> <li>Application Contains all the parameters for configuring the functions that go beyond the actual measurement (e. g. totalizer).</li> <li>Diagnosis Contains all the parameters that are needed to detect and analyze operating errors.</li> </ul> |

For an overview of the entire operating menu:  $\rightarrow \triangleq$  28.

#### **Direct access to parameters**

The parameters can only be accessed directly via the "Expert" user role.

| Parameter name                     | Description  |  |
|------------------------------------|--|--|
| Direct Access (119)                | Enter the direct access code to go directly to a parameter.    |  |
| Entry                              | Options:   |  |
| -                                  | Enter the desired parameter code.                              |  |
| Menu path:                         | Factory setting:   |  |
| Expert $\rightarrow$ Direct Access | 0  |  |
|                                    | Note:  |  |
|                                    | For direct access, it is not necessary to enter leading zeros. |  |

#### 5.3.3 Operation with a device display (optional)

A 4-line liquid crystal display (LCD) is used for display and operation. The local display shows measured values, dialog texts, fault messages and notice messages.

For easy operation the display can be taken out of the housing (1) to (3). It is connected to the device through a 90 mm (3.54 in) cable.

The display of the device can be turned in  $90^{\circ}$  stages (4) to (6).

Depending on the orientation of the device, this makes it easy to operate the device and read the measured values.

#### Functions:

- 8-digit measured value display including sign and decimal point, bargraph for 4 mA to 20 mA HART as current display
- Three keys for operation
- · Simple and complete menu guidance as parameters are split into several levels and groups
- Each parameter is given a 3-digit parameter code for easy navigation
- Possibility of configuring the display to suit individual requirements and preferences, such as language, alternating display, contrast setting, display of other measured values such as sensor temperature etc.
- Comprehensive diagnostic functions (fault and warning message etc.)

## Pressure Transmitter LHC-M51, PPC-M51, LHCR-51, LHCS-51 Operation

The following table illustrates the symbols that can appear on the local display. Four symbols can occur at one time.

| Symbol | Meaning  |
|--------|--|
| 5      | <b>Lock symbol</b><br>The operation of the device is locked. To unlock the device, $\rightarrow \textcircled{B}$ 35, "Locking/unlocking operation".            |
| \$     | Communication symbol<br>Data transfer via communication  |
| S      | <b>Error message "Out of specification"</b><br>The device is being operated outside its technical specifications (e. g. during warm-up or cleaning processes). |
| C      | <b>Error message "Service mode"</b><br>The device is in the service mode (during a simulation, for example).   |
| Μ      | Error message "Maintenance required"<br>Maintenance is required. The measured value remains valid.   |
| F      | Error message "Failure detected"<br>An operating error has occurred. The measured value is no longer valid.  |

#### Operating keys on the display and operating module

| Operating<br>key(s) | Meaning   |
|---------------------|---|
| +                   | <ul><li>Navigate downwards in the picklist</li><li>Edit the numerical values and characters within a function</li></ul>   |
| _                   | <ul><li>Navigate upwards in the picklist</li><li>Edit the numerical values and characters within a function</li></ul>   |
| E                   | <ul> <li>Confirm entry</li> <li>Jump to the next item</li> <li>Selection of a menu item and activation of the editing mode</li> </ul>   |
| + and E             | Contrast setting of local display: darker   |
| - and E             | Contrast setting of local display: brighter   |
| + and +             | <ul> <li>ESC functions:</li> <li>Exit the edit mode for a parameter without saving the changed value.</li> <li>You are in a menu at a selection level. Each time you press the keys simultaneously, you go up a level in the menu.</li> </ul> |

#### Parameter with picklist

Example: selecting "Deutsch" as the language of the menu.

| Local display                       | Operation   |
|-------------------------------------|---|
| Language 00C                        | "English" is set as the menu language (default value).                                      |
| VEnglisa                            | A ✓ in front of the menu text indicates the active  |
| Deutsch                             | option.   |
| Language 000<br>Deutsch<br>√English | Select "Deutsch" with "+" or "-".   |
| Language 000                        | <ol> <li>Confirm your choice with "E". A ✓ in front of the</li></ol>                        |
| ✓Deutsch                            | menu text indicates the active option. ("Deutsch" is  |
| English                             | now selected as the menu language.) <li>Exit the edit mode for the parameter with "E".</li> |

#### User-definable parameters

Example: setting "Set URV" parameter from 100 mbar (1.5 psi) to 50 mbar (0.75 psi).

| Local display        |             | Operation   |
|----------------------|-------------|---|
| Set URV<br>100.000   | 014<br>mbar | The local display shows the parameter to be<br>changed. The value highlighted in black can be<br>changed. The "mbar" unit is specified in another<br>parameter and cannot be modified here.                     |
| Set URV              | 014<br>mbar | <ol> <li>Press "+" or "-" to get to the editing mode.</li> <li>The first digit is highlighted in black.</li> </ol>  |
| Set URV              | 014<br>mbar | <ol> <li>Use "+" to change "1" to "5".</li> <li>Confirm "5" with "E". The cursor jumps to the next position (highlighted in black).</li> <li>Confirm "0" with "E" (second position).</li> </ol>                 |
| Set URV<br>(500.000  | 014<br>mbar | The third position is highlighted in black and can now be edited.   |
| Set URV<br>(508).000 | 014<br>mbar | <ol> <li>Switch to the "→" symbol with the "-" key.</li> <li>Use "E" to save the new value and exit the editing mode. → See next graphic.</li> </ol>  |
| Set URV<br>50.0000   | 014<br>mbar | <ul> <li>The new value for the upper range value is 50.0 mbar (0.75 psi).</li> <li>You exit the edit mode for the parameter with "E".</li> <li>You can get back to the editing mode with "+" or "_".</li> </ul> |

#### Accepting the pressure present

Example: setting position adjustment

| Local display                              | Operation  |
|--|--|
| Pos. zero adjust 007<br>Vfibort<br>Confirm | The pressure for position adjustment is present at the device.   |
| Pos. zero adjust 007<br>Confirm<br>√Abort  | Use "+" or "-" to switch to the "Confirm" option. The active option is highlighted in black.   |
| Compensation<br>accepted!                  | Accept the pressure present as position adjustment<br>with the "E" key. The device confirms the adjustment<br>and goes back to the "Pos. zero adjust" parameter. |
| Pos. zero adjust 007<br>Vfibort<br>Confirm | Exit the edit mode for the parameter with "E".   |

### 5.3.4 Operation via field communicator

Compact, flexible and robust industry handheld terminal for remote parametrization and measured value inspection via the HART current output (4 mA to 20 mA).

# 5.3.5 Operation via PACTware<sup>TM</sup>

**PACT***ware*<sup>TM</sup> is an asset management tool based on FDT technology. With **PACT***ware*<sup>TM</sup>, you can configure all Pepperl+Fuchs devices as well as devices from other manufacturers that support the FDT standard. Hardware and software requirements you can find on the internet: www.pepperl-fuchs.com.

**PACT***ware*<sup>TM</sup> supports the following functions:

- Configuration of transmitters in online/offline mode
- Loading and saving device data (upload/download)
- Documentation of the measuring point
- · Offline parametrization of transmitters

Connection options via HART modem and USB port of a computer

#### NOTICE

- Further information on **PACT***mare*<sup>TM</sup> can be found on the Internet: www.pepperl-fuchs.com.
- As not all internal device dependencies can be mapped in offline operation, the consistency of the parameters must be checked before the parameters are transmitted to the device.

#### 5.3.6 Locking/unlocking operation

Once you have entered all the parameters, you can lock your entries against unauthorized and undesired access.

Locked operation is indicated as follows:

- By the ... symbol on the onsite display
- The parameters are grayed out in **PACT** ware<sup>TM</sup> and the HART handheld terminal, which means they cannot be edited. Indicated in the corresponding "Locking" parameter.

Parameters which refer to how the display appears, e. g. "Language" and "Display contrast", can still be altered.

NOTICE

If operation is locked by means of the DIP switch, you can only unlock operation again by means of the DIP switch. If operation is locked by means of the operating menu, you can only unlock operation again using the operating menu. The "Operator code" parameter is used to lock and unlock the device.

| Parameter name   | Description  |
|--|--|
| Operator code (021)  | Use this function to enter a code to lock or unlock operation.   |
| Entry  | User input:  |
|  | <ul> <li>To lock: Enter a number ≠ the release code (value range: 1 to 9999).</li> </ul>   |
| Menu path:   | To unlock: Enter the release code.   |
| Setup $\rightarrow$ Extended setup $\rightarrow$ Operator code | NOTICE<br>The release code is "0" in the order configuration. Another release code can be defined in the "Code definition" parameter.<br>If the user has forgotten the release code, the release code can be visible by entering the number "5864".<br>Factory setting:<br>0 |

The release code is defined in the "Code definition" parameter.

| Parameter name  | Description  |
|---|--|
| Code definition (023)                                 | Use this function to enter a release code with which the device can be unlocked. |
| Entry   | User input:  |
|   | A number between 0 and 999   |
| Menu path:  | Factory setting:   |
| Setup $\rightarrow$ Extended setup $\rightarrow$ Code | 0  |
| definition  |  |

### 5.3.7 Resetting to factory settings (reset)

By entering a certain code, you can completely, or partially, reset the entries for the parameters to the factory settings. Enter the code by means of the "Enter reset code" parameter (menu path: "Expert"  $\rightarrow$  "System"  $\rightarrow$  "Management"  $\rightarrow$  "Enter reset code").

The factory setting of each parameter is indicated in the parameter description ( $\rightarrow \stackrel{\frown}{=} 68$ ). There are various reset codes for the device. The following table illustrates which parameters are reset by the particular reset codes. Operation must be unlocked to reset parameters ( $\rightarrow \stackrel{\frown}{=} 35$ ).

**NOTICE** Any customer-specific configuration carried out at the factory is not affected by a reset (customer-specific configuration remains). If you want to change the customer-specific configuration carried out at the factory, please contact Pepperl+Fuchs Service.

As no separate service level is provided, the order code and serial number may be changed without a specific unblocking code (e. g. after replacing the electronics).

| Reset code <sup>1</sup> | Description and effect  |
|-------------------------|---|
| 62                      | PowerUp reset (warm start)  |
|                         | The device is restarted.  |
|                         | <ul> <li>Data are read back anew from the EEPROM (processor is initialized again).</li> </ul> |
|                         | <ul> <li>Any simulation which may be running is ended.</li> </ul>                             |
| 333                     | User reset  |
|                         | <ul> <li>This code resets all the parameters apart from:</li> </ul>                           |
|                         | - Device tag (022)  |
|                         | - Linearization table   |
|                         | - Operating hours (162)   |
|                         | - Event logbook   |
|                         | - Current trim 4mA (135)  |
|                         | - Current trim 20mA (136)   |
|                         | - Lo trim sensor (131)  |
|                         | - Hi trim sensor (132)  |
|                         | <ul> <li>Any simulation which may be running is ended.</li> </ul>                             |
|                         | The device is restarted.  |
| 7864                    | Total reset   |
|                         | This code resets all the parameters apart from:   |
|                         | - Operating hours (162)   |
|                         | - Event logbook   |
|                         | - Lo trim sensor (131)  |
|                         | - Hi trim sensor (132)  |
|                         | <ul> <li>Any simulation which may be running is ended.</li> </ul>                             |
|                         | The device is restarted.  |
| To be optored i         | n "System" -> "Management" -> "Enter reset code" (124)  |

To be entered in "System"  $\rightarrow$  "Management"  $\rightarrow$  "Enter reset code" (124)

NOTICE

After a "Total reset" in **PACT***ware*<sup>TM</sup> you have to press the "refresh" button in order to ensure that the measuring units are also reset.

# 6 Commissioning

If a pressure smaller than the minimum permitted pressure or greater than the maximum permitted pressure is present at the device, the following messages are output in succession:

- •"S140 Working range P" or "F140 Working range P"
- •"S841 Sensor range" or "F841 Sensor range"
- •"S971 Adjustment"

The messages are depending on the setting in the "Alarm behavior" (050) parameter.

The device is configured for the Pressure measuring mode as standard. The measuring range and the unit in which the measured value is transmitted correspond to the specifications on the nameplate.

## 6.1 Function check

Carry out a post-installation and a post-connection check as per the checklist before commissioning the device.

- "Post-installation check" checklist  $\rightarrow \supseteq$  19
- "Post-connection check" checklist  $\rightarrow \stackrel{\frown}{=} 24$

## 6.2 Commissioning without an operating menu

#### 6.2.1 Pressure measuring mode

If no local display is connected, the following functions are possible by means of the keys on the electronic insert:

- · Position adjustment (zero point correction)
- Setting lower range value and upper range value
- Device reset ( $\rightarrow \blacksquare 36$ )

#### NOTICE

- Operation must be unlocked.  $\rightarrow \geqq$  35, "Locking/unlocking operation".
- The pressure applied must be within the nominal pressure limits of the sensor. See information on the nameplate.

| 1. Carrying out position adjustment. <sup>1</sup>                 |   | 2. Setting lower range value.                                   |   | 3. Setting upper range value.                                   |   |
|---|---|---|---|---|---|
| Pressure is present at device.                                    |   | Desired pressure for lower range value is present at device.    |   | Desired pressure for upper range value is present at device.    |   |
| $\downarrow$  |   | $\downarrow$  |   | $\downarrow$  |   |
| Press the "Zero" and "Span" keys simultaneously for at least 3 s. |   | Press the "Zero" key for at least 3 s.                          |   | Press the "Span" key for at least 3 s.                          |   |
| $\downarrow$  |   | $\downarrow$  |   | $\downarrow$  |   |
| Does the LED on the electronic insert light up briefly?           |   | Does the LED on the electronic insert light up briefly?         |   | Does the LED on the electronic insert light up briefly?         |   |
| Yes   | No  | Yes   | No  | Yes   | No  |
| $\downarrow$  | $\downarrow$  | $\downarrow$  | $\downarrow$  | $\downarrow$  | $\downarrow$  |
| Applied pressure for position adjustment has been accepted.       | Applied pressure for<br>position adjustment<br>has not been<br>accepted. Observe<br>the input limits. | Applied pressure for<br>upper range value<br>has been accepted. | Applied pressure for<br>upper range value<br>has not been<br>accepted. Observe<br>the input limits. |

Observe warning on commissioning ( $\rightarrow \textcircled{}{}37$ )

#### 6.2.2 Level measuring mode

The following functions are possible by means of the keys on the electronic insert:

- Position adjustment (zero point correction)
- · Setting the lower and upper pressure value and assigning to the lower and upper level value
- Device reset ( $\rightarrow \blacksquare 36$ )

#### NOTICE

- The "Zero" and "Span" keys only have a function with the following setting:
  - "Level selection" = "In pressure", "Calibration mode" = "Wet"
  - The keys have no function in other settings.

The following parameters are set to the following values at the factory:

- "Level selection" = "In pressure"
- "Calibration mode": wet
- "Output unit": %
- "Empty calib.": 0.0
- "Full calib.": 100.0
- "Set LRV": 0.0 (corresponds to 4 mA value)
- "Set URV": 100.0 (corresponds to 20 mA value)
- Operation must be unlocked.  $\rightarrow \blacksquare$  35, "Locking/unlocking operation".
- The pressure applied must be within the nominal pressure limits of the sensor. See information on the nameplate.

| Carrying out position   | n adjustment. <sup>1</sup>  | Setting lower pressure value.  |   | Setting upper pressure value.  |   |  |

Observe<br>the input limits. | The pressure present<br>was saved as the<br>lower pressure value<br>("empty pressure")<br>and assigned to the<br>lower level value<br>("empty calibration"). | The pressure present<br>was not saved as the<br>lower pressure value.<br>Observe the input<br>limits. | The pressure present<br>was saved as the<br>upper pressure value<br>("full pressure") and<br>assigned to the<br>upper level value<br>("full calibration"). | The pressure present<br>was not saved as the<br>upper pressure<br>value. Observe the<br>input limits. |  |

Observe warning on commissioning ( $\rightarrow \ge 37$ )

#### 6.3 Commissioning with an operating menu

Commissioning comprises the following steps:

- Function check ( $\rightarrow \blacksquare 37$ ) 1.
- Selecting the language, measuring mode and pressure unit ( $\rightarrow \supseteq$  39) 2.
- Position adjustment ( $\rightarrow \blacksquare 40$ ) 3.
- 4. Configuring measurement:
  - Pressure measurement (→  $\triangleq$  54 ff)
     Level measurement (→  $\triangleq$  41 ff)

#### 6.3.1 Selecting the language, measuring mode and pressure unit

#### Language selection

| Parameter name  | Description   |
|---|---|
| Language (000)  | Select the menu language for the local display.   |
| Selection Menu path: Main menu $\rightarrow$ Language | <ul> <li>Options:</li> <li>English</li> <li>Another language (as selected when ordering the device)</li> <li>Possibly a third language (language of the manufacturing plant)</li> </ul> |
|   | Factory setting:<br>English   |

#### Measuring mode selection

| Parameter name                               | Description  |
|--|--|
| Measuring mode (005)                         | Select the measuring mode.   |
| Selection                                    | The operating menu is structured differently depending on the measuring mode selected.   |
| Menu path: Setup $ ightarrow$ Measuring mode | <b>NOTICE</b><br>If the measuring mode is changed, no conversion takes place. If necessary, the device has to be recalibrated after the measuring mode has been changed. |
|  | Options:<br>• Pressure<br>• Level<br>• Flow  |
|  | Factory setting:<br>Pressure   |

#### **Pressure unit selection**

| Parameter name                                     | Description  |
|--|--|
| Press. eng. unit (125)<br>Selection                | Select the pressure unit.<br>If a new pressure unit is selected, all pressure-specific parameters are converted and displayed with the<br>new unit.  |
| Menu path:<br>Setup $\rightarrow$ Press. eng. unit | <ul> <li>Options:</li> <li>mbar, bar</li> <li>mmH2O, mH2O, inH2O</li> <li>ftH2O</li> <li>Pa, kPa, MPa</li> <li>psi</li> <li>mmHg, inHg</li> <li>kgf/cm<sup>2</sup></li> <li>Factory setting:</li> <li>mbar or bar depending on the sensor nominal measuring range, or as per order specifications</li> </ul> |

## 6.4 Position zero adjustment

The pressure resulting from the orientation of the device can be corrected here.

| Parameter name  | Description   |
|---|---|
| Corrected press. (172)  | Displays the measured pressure after sensor trim and position adjustment.   |
| Display   | NOTICE  |
| Menu path: If this value is not equal to "0", it can be corrected to "0" by the position adjustment |   |
| Setup $\rightarrow$ Corrected press.  |   |
| Pos. zero adjust (007)<br>(Deltabar M and gauge pressure  | Position zero adjustment – the pressure difference between zero (set point) and the measured pressure need not be known.  |
| sensor)<br>Selection<br>Menu path:<br>Setup $\rightarrow$ Pos. zero adjust                          | <ul> <li>Example:</li> <li>Measured value = 2.2 mbar (0.033 psi)</li> <li>You correct the measured value via the "Pos. zero adjust" parameter with the "Confirm" option. This means that you assign the value 0.0 to the pressure present.</li> <li>Measured value (after pos. zero adjust) = 0.0 mbar</li> <li>The current value is also corrected.</li> </ul>   |
|   | Options <ul> <li>Confirm</li> <li>Abort</li> </ul>  |
|   | Factory setting:<br>Abort   |
| Calib. offset (192) / (008)<br>(absolute pressure sensor)   | Position adjustment – the pressure difference between set point and the measured pressure must be known.  |
| Entry   | <ul> <li>Example:</li> <li>Measured value = 982.2 mbar (14.73 psi)</li> <li>You correct the measured value with the value entered (e. g. 2.2 mbar (0.033 psi)) via the "Calib. offset" parameter. This means that you are assigning the value 980.0 (14.7 psi) to the pressure present.</li> <li>Measured value (after calib. offset) = 980.0 mbar (14.7 psi)</li> <li>The current value is also corrected.</li> <li>Factory setting:</li> <li>0.0</li> </ul> |

## 6.5 Level measurement

#### 6.5.1 Information on level measurement

HINWEIS You have a choice of two methods for calculating the level: "In pressure" and "In height". The table in the "Overview of level measurement" section that follows provides you with an overview of these two measuring tasks.

- The limit values are not checked, i. e. the values entered must be appropriate for the sensor and the measuring task for the device to be able to measure correctly.
- Customer-specific units are not possible.
- There is no unit conversion.
- The values entered for "Empty calib./Full calib.", "Empty pressure/Full pressure", "Empty height/Full height" and "Set LRV/Set URV" must be at least 1 % apart. The value will be rejected, and a warning message displayed, if the values are too close together.

#### 6.5.2 Overview of level measurement

| Measuring task   | Level selection | Measured<br>variable selection   | Description   | Measured value display   |
|--|-----------------|--|---|--|
| Calibration is performed by<br>entering two pressure-level<br>value pairs.               | "In pressure"   | Via the "Output unit"<br>parameter: %, level,<br>volume or mass units. | <ul> <li>Calibration with reference pressure<br/>(wet calibration), see →</li></ul>   | The measured value display<br>and the<br>"Level before lin" parameter<br>display the measured value. |
| Calibration is performed by<br>entering the density and two<br>height-level value pairs. | "In height"     |  | <ul> <li>Calibration with reference pressure<br/>(wet calibration), see → ≧ 46</li> <li>Calibration without reference pressure<br/>(dry calibration), see → ≧ 48</li> </ul> |  |

#### 6.5.3 "In pressure" level selection Calibration with reference pressure (wet calibration)

#### Example:

In this example, the level in a tank should be measured in "m". The maximum level is 3 m (9.8 ft). The pressure range is set to 0 mbar to 300 mbar (4.5 psi).

#### Prerequisite:

- The measured variable is in direct proportion to the pressure.
- The tank can be filled and emptied.

NOTICE

The values entered for "Empty calib./Full calib." and" Set LRV/Set URV" and the pressures present at the device must be at least 1 % apart. The value will be rejected, and a warning message displayed, if the values are too close together. Further limit values are not checked, i. e. the values entered must be appropriate for the sensor and the measuring task for the measuring device to be able to measure correctly.

# Pressure Transmitter LHC-M51, PPC-M51, LHCR-51, LHCS-51 Commissioning

|    | Description   |   |
|----|---|---|
| 5  | Select a level unit via the "Output unit" parameter, here "m" for example.  | h<br>T=1  |
|    | Menu path: Setup $\rightarrow$ Extended setup $\rightarrow$ Level $\rightarrow$ Output unit   | [m]   |
| 6  | Select the "Wet" option via the "Calibration mode" parameter.   | 2 3   |
|    | Menu path: Setup $\rightarrow$ Extended setup $\rightarrow$ Level $\rightarrow$ Calibration mode  |   |
| 7  | If calibration is performed with a medium other than the process medium, enter the density of the calibration medium in the "Adjust density" parameter. |   |
|    | Menu path: Setup $\rightarrow$ Extended setup $\rightarrow$ Level $\rightarrow$ Adjust density  |   |
| 8  | The pressure for the lower calibration point is present at the device, here 0 mbar for example.   |   |
|    | Select the "Empty calib." parameter.  | 0 300 <u>P</u><br>[mbar]  |
|    | Menu path: Setup $\rightarrow$ Extended setup $\rightarrow$ Level $\rightarrow$ Empty calib.  |   |
|    | Enter the level value, here 0 m for example. The pressure value present is assigned to the lower level value by confirming the value.                   | I A   |
| 9  | The pressure for the upper calibration point is present at the device, here 300 mbar (4.5 psi) for example.   | <ul><li>④ 20</li></ul>  |
|    | Select the "Full calib." parameter.   |   |
|    | Menu path: Setup $\rightarrow$ Extended setup $\rightarrow$ Level $\rightarrow$ Full calib.   |   |
|    | Enter the level value, here 3 m (9.8 ft) for example. The pressure value present is assigned to the upper level value by confirming the value.          |   |
| 10 | Set the level value for the lower current value (4 mA) by means of "Set LRV".   |   |
|    | Menu path: Setup $\rightarrow$ Extended setup $\rightarrow$ Current output $\rightarrow$ Set LRV  |   |
| 11 | Set the level value for the upper current value (20 mA) by means of "Set URV".  | 0 3 <u>h</u><br>[m]   |
|    | Menu path: Setup $\rightarrow$ Extended setup $\rightarrow$ Current output $\rightarrow$ Set URV  | Calibration with refesrence pressure – wet calibration                |
| 12 | If calibration was performed with a medium other than the process medium, specify the density of the process medium in the "Process density" parameter. | 1 See table, step 8.<br>2 See table, step 9.<br>3 See table, step 10. |

### 6.5.4 "In pressure" level selection Calibration without reference pressure (dry calibration)

#### Example:

In this example, the volume in a tank should be measured in liters. The maximum volume of 1000 liters (264 US gal) corresponds to a pressure of 450 mbar (6.75 psi). The minimum volume of 0 liters corresponds to a pressure of 50 mbar (0.75 psi) since the device is mounted below the start of the level measuring range.

#### Prerequisite:

- The measured variable is in direct proportion to the pressure.
- This is a theoretical calibration i. e. the pressure and volume values for the lower and upper calibration point must be known.

#### NOTICE

- The values entered for "Empty calib./Full calib.", "Empty pressure/Full pressure" and "Set LRV/Set URV" must be at least 1 % apart. The value will be rejected, and a warning message displayed, if the values are too close together. Further limit values are not checked, i. e. the values entered must be appropriate for the sensor and the measuring task for the measuring device to be able to measure correctly.

#### 6.5.5 "In height" level selection Calibration with reference pressure (wet calibration)

#### Example:

In this example, the volume in a tank should be measured in liters. The maximum volume of 1000 liters (264 US gal) corresponds to a level of 4.5 m (15 ft). The minimum volume of 0 liters corresponds to a level of 0.5 m (1.6 ft) since the device is mounted below the start of the level measuring range.

The density of the medium is  $1 \text{ g/cm}^3$  (1 SGU).

#### Prerequisite:

- The measured variable is in direct proportion to the pressure.
- The tank can be filled and emptied.

**NOTICE** The values entered for "Empty calib./Full calib.", " Set LRV/Set URV" and the pressures present at the device must be at least 1 % apart. The value will be rejected, and a warning message displayed, if the values are too close together. Other limit values are not checked, i. e. the values entered must be appropriate for the sensor and the measuring task for the device to be able to measure correctly.

| 6 | Select the "Dry" option via the "Calibration mode" parameter.  | Calibration without reference pressure – dry calibration                  |
|   | Menu path: Setup $\rightarrow$ Extended setup $\rightarrow$ Level $\rightarrow$ Calibration mode   | 1See table, step 11.2See table, steps 7 and 8.3See table, steps 9 and 10. |

## Pressure Transmitter LHC-M51, PPC-M51, LHCR-51, LHCS-51 Commissioning

The measured variables %, level, volume and mass are available for this level mode. See  $\rightarrow =$  73, "Output unit (025)".

### 6.5.7 Calibration with partially-filled tank (wet calibration)

#### Example:

In this example a wet calibration is shown when it is not possible to empty the vessel and then fill it up to 100 %. Here a 20 % filling is used as "Empty" and a "25 %" filling is used as "Full" calibration point. The calibration is then extended from 0 % to 100 % and LRV/URV are adjusted accordingly.

#### Prerequisite:

The default value in the level mode for calibration mode is "Wet".

However, it can be changed via: Setup -- Extended Setup -- Level -- Calibration mode

|   | Description  |  |
|---|--|--|
| 1 | Select the "Level" measuring mode via the "Measuring mode (005)" parameter.  |  |
|   | Menu path: Setup $\rightarrow$ Measuring mode (005)  |  |
| 2 | Set value for "Empty calib." with acting pressure for Level e. g. 20 %.  |  |
|   | Menu path: Setup $\rightarrow$ Extended Setup $\rightarrow$ Level $\rightarrow$ Empty calibration  |  |
| 3 | Set value for "Full calib." with acting pressure for Level e. g. 25 %.   |  |
|   | Menu path: Setup $\rightarrow$ Extended Setup $\rightarrow$ Level $\rightarrow$ Full calibration   |  |
| 4 | The values for full and empty pressure are measured automatically at adjustment.<br>As the transmitter automatically sets the pressure values that suit to empty and full<br>calibration to min and max pressure that cause the output current, it is necessary to<br>set the right upper range value (URV) and lower range value (LRV). |  |
|   |  | 20 %   |
|   |  |  |
|   |  | Calibration with partially-filled tank<br>1 See table, step 2<br>2 See table, step 3 |

It is also possible to use different liquids (e. g. water) for the adjustment. In this case you have to enter the different densities at following menu path:

•Setup  $\rightarrow$  Ext. Setup  $\rightarrow$  Level  $\rightarrow$  Adjust density (034) (e. g. 1.0 kg/l for water) •Setup  $\rightarrow$  Ext. Setup  $\rightarrow$  Level  $\rightarrow$  Process density (035) (e. g. 0.8 kg/l for oil)

## 6.6 Linearization

#### 6.6.1 Manual entry of the linearization table

#### Example:

In this example, the volume in a tank with a conical outlet should be measured in m<sup>3</sup>.

#### Prerequisite:

- This is a theoretical calibration, i. e. the points for the linearization table are known.
- The "Level" operating mode has been selected.
- A level calibration has been performed.

NOTICE

For a description of the parameters mentioned,  $\rightarrow \supseteq 68$ , "Description of parameters".

### NOTICE

- 1. Error message F510 "Linearization" and alarm current as long as the table is being entered and until the table is activated.
- 2. The 0 % value (= 4 mA) is defined by the smallest point in the table. The 100 % value (= 20 mA) is defined by the biggest point in the table.
- 3. You can change the allocation of the volume or mass values to the current values using the "Set LRV" and "Set URV" parameters.

#### 6.6.2 Manual entry of the linearization table via the operating tool

With an operating tool based on FDT technology (e. g. **PACT***mare*<sup>TM</sup>), it is possible to enter linearization via a module that has been specially designed for this. In doing so, you gain an overview of the selected linearization even while making the entry. Additionally, it is possible to call up pre-programmed tank shapes.

**NOTICE** The linearization table can also be entered manually point for point in the menu of the operating tool ( $\rightarrow \stackrel{\frown}{=} 51$ , "Manual entry of the linearization table".

#### 6.6.3 Semi-automatic entry of the linearization table

#### Example:

In this example, the volume in a tank with a conical outlet should be measured in m<sup>3</sup>.

#### Prerequisite:

- The tank can be filled or emptied. The linearization characteristic must rise continuously.
- The "Level" operating mode has been selected.

- 1. Error message F510 "Linearization" and alarm current as long as the table is being entered and until the table is activated.
- 2. The 0 % value (= 4 mA) is defined by the smallest point in the table.
- The 100 % value (= 20 mA) is defined by the biggest point in the table.
- You can change the allocation of the volume or mass values to the current values using the "Set LRV" and "Set URV" parameters.

## 6.7 Pressure measurement

#### 6.7.1 Calibration without reference pressure (dry calibration)

#### Example:

In this example, a device with a 400 mbar (6 psi) sensor is configured for the 0 mbar to +300 mbar (4.5 psi) measuring range, i. e. 0 mbar is assigned to the 4 mA value and 300 mbar (4.5 psi) to the 20 mA value.

#### Prerequisite:

This is a theoretical calibration, i. e. the pressure values for the lower and upper range are known.

Due to the orientation of the device, there may be pressure shifts in the measured value, i. e. the measured value is not zero in a pressureless condition. For information on how to perform position adjustment, see  $\rightarrow = 40$ , "Position zero adjustment".

#### 6.7.2 Calibration with reference pressure (wet calibration)

#### Example:

In this example, a device with a 400 mbar (6 psi) sensor is configured for the 0 mbar to +300 mbar (4.5 psi) measuring range, i. e. 0 mbar is assigned to the 4 mA value and 300 mbar (4.5 psi) to the 20 mA value.

#### Prerequisite:

The pressure values 0 mbar and 300 mbar (4.5 psi) can be specified. The device is already mounted, for example.

**NOTICE** For a description of the parameters mentioned,  $\rightarrow \stackrel{\text{l}}{=} 68$ , "Description of parameters".

# 6.8 Electrical differential pressure measurement with gauge pressure sensors

#### Example:

In the example given, twopressure transmitters (each with a gauge pressure sensor) are interconnected. The pressure difference can thus be measured using two independent pressure transmitters.

**NOTICE** For a description of the parameters mentioned  $\rightarrow \stackrel{>}{=} 68$ , "Description of parameters".

| 5 | Set the output current to "Fixed" 4.0 mA via the "Current mode" parameter.  |
|   | Menu path: Expert $\rightarrow$ Communication $\rightarrow$ HART Config   |
| 6 | Configure an address ≠ 0 via the "Bus address" parameter, e. g. bus address = 1<br>(HART 5.0 master: Range 0 to 15, where address = 0 calls up the "Signaling" setting;<br>HART6.0 master: range 0 to 63) |
|   | Menu path: Expert $\rightarrow$ Communication $\rightarrow$ HART Config.  |

|   | Description  |
|---|--|
|   | Adjustment of the pressure transmitter on the low pressure side                                      |
|   | (the differential is generated in this device)   |
| 1 | Select the "Pressure" measuring mode via the "Measuring mode" parameter.                             |
|   | Menu path: Setup $ ightarrow$ Measuring mode   |
| 2 | Select a pressure unit via the "Press eng. unit" parameter, here "mbar" for example.                 |
|   | Menu path: Setup $\rightarrow$ Press. eng. unit  |
| 3 | The pressure transmitter is unpressurized, perform position adjustment , see $\rightarrow \geqq$ 40. |
| 4 | Set the output current to "Fixed" 4.0mA via the "Current mode" parameter.                            |
|   | Menu path: Expert $\rightarrow$ Communication $\rightarrow$ HART Config.                             |
| 5 | Configure an address <> 0 via the "Bus address" parameter, e. g. bus address = 2                     |
|   | (HART 5.0 master: Range 0 to 15, where address = 0 calls up the "Signaling" setting;                 |
|   | HART 6.0 master: range 0 to 63)  |
|   | Menu path: Expert $\rightarrow$ Communication $\rightarrow$ HART Config.                             |
| 6 | Activate the reading of a value sent externally in burst mode via the "Electr. Delta P" parameter.   |
|   | Menu path: Expert $\rightarrow$ Application  |
| 7 | Result: The measured value output by the pressure transmitter on the low pressure side equals the    |
|   | differential: high pressure - low pressure, and can be read out by means of a HART request of the    |
|   | address of the pressure transmitter on the low pressure side.  |

NOTICE

It is not permitted to reverse the assignment of the measuring points to the direction of communication. The measured value of the transmitting device (via burst) must always be greater than the measured value of the receiving device (via the "Electr. Delta P" function).

Adjustments that result in an offset of the pressure values (e. g. position adjustment, trim) must always be performed in accordance with the individual sensor and its orientation, irrespective of the "Electr. Delta P" application. Other settings result in non-permitted use of the "Electr. Delta P" function and can lead to incorrect measured values.

# 7 Maintenance

Keep the pressure compensation and GORE-TEX® filter (1) free from contamination.

## 7.1 Exterior cleaning

Please note the following points when cleaning the device:

- The cleaning agents used should not corrode the surface and the seals.
- Mechanical damage to the diaphragm, e. g. due to sharp objects, must be avoided.
- Observe the degree of protection of the device. See the nameplate if necessary ( $\rightarrow \triangleq 6 \text{ ff}$ ).

# 8 Troubleshooting

## 8.1 Messages

The following table lists the messages that can occur. The Diagnostic code parameter shows the message with the highest priority. The device has four different status information codes according to NAMUR NE107:

- F = failure
- M (warning) = maintenance required
- C (warning) = function check
- S (warning) = out of specification (deviations from the permitted ambient or process conditions determined by the device with the self-monitoring function, or errors in the device itself indicate that the measuring uncertainty is greater than what would be expected under normal operating conditions).

| Diagnostic<br>code | Error message    | Cause   | Measure  |

#### 8.2 **Response of output to errors**

The response of the current output to errors is defined in the following parameters:

- "Alarm behav. P (050)" → 77 "Output fail mode (190)" → 77 "High alarm curr. (052)" → 77

## 8.3 Repair

The Pepper+Fuchs repair concept assumes that the devices have a modular design and that repairs can be done by the Pepperl+Fuchs service or specially trained customers.

#### NOTICE

- For certified devices, please see the "Repair of Ex-certified devices" section.
- For more information on service and spare parts, contact the Service Department at Pepperl+Fuchs.

## 8.4 Repair of Ex-certified devices

When repairing Ex-certified devices, please note the following:

- Only specialist personnel or Pepperl+Fuchs may repair certified devices.
- Relevant standards, national hazardous area regulations and safety instructions and certificates must be observed.
- Only genuine Pepperl+Fuchs spare parts may be used.
- When ordering spare parts, please check the device designation on the nameplate. Identical
  parts may only be used as replacements.
- Electronic inserts or sensors already in use in a standard device may not be used as spare parts for a certified device.
- Carry out repairs according to the instructions. Following a repair, the device must fulfill the requirements of the specified individual tests.
- A certified device may only be converted to another certified device version by Pepperl+Fuchs.
- All repairs and modifications must be documented.

## 8.5 Spare parts

An overview of the spare parts for your device is available in the Technical Information TI00436O and TI00437O.

When ordering spare parts, always quote the serial number indicated on the nameplate. As far as necessary, the spare parts also include replacement instructions.

## 8.6 Return

The measuring device must be returned if repairs or a factory calibration are required, or if the wrong measuring device has been ordered or delivered. According to legal regulations, Pepperl+Fuchs, as a ISO-certified company, is required to follow certain procedures when handling returned products that are in contact with process fluids.

To ensure swift, safe and professional device returns, please read the return procedures and conditions on the Pepperl+Fuchs website.

## 8.7 Disposal

When disposing, separate and recycle the device components based on the materials.

## 8.8 Software history

## 10.2 Description of parameters

This section describes the parameters in the order they are arranged in the "Expert" operating menu.

#### Expert

| Parameter name      | Description  |
|---------------------|--|
| Direct access (119) | Enter the direct access code to go directly to a parameter.    |
| Entry               | Options:   |
|                     | A number between 0 and 999 (only valid entries are recognized) |
| Factory setting:    |  |
|                     | 0  |
|                     |  |
|                     | NOTICE   |
|                     | For direct access, it is not necessary to enter leading zeros. |

## 10.2.1 System

#### $\textbf{Expert} \rightarrow \textbf{System}$

| Parameter name                 | Description  |
|--------------------------------|--|
| Code definition (023)<br>Entry | Use this function to enter a release code with which the device can be unlocked.<br><b>Options:</b><br>A number between 0 and 9999<br><b>Factory setting:</b><br>0   |
| Lock switch (120)<br>Display   | <ul> <li>Displays the status of DIP switch 1 on the electronic insert.</li> <li>You can lock or unlock parameters relevant to the measured value with</li> <li>DIP switch 1. If operation is locked by means of the "Operator code" (021)</li> <li>parameter, you can only unlock operation again by means of this parameter.</li> <li>Display:</li> <li>On (locking switched on)</li> <li>Off (locking switched off)</li> <li>Factory setting:</li> <li>Off (locking switched off)</li> </ul>   |
| Operator code (021)<br>Entry   | <ul> <li>Use this function to enter a code to lock or unlock operation.</li> <li>Options: <ul> <li>To lock operation: enter a number between 1 and 9999 provided the release code = 0; then a number ≠ release code.</li> <li>To unlock operation: enter the number 0.</li> </ul> </li> <li>NOTICE The release code is "0" in the order configuration. Another release code can be defined in the "Code definition" parameter. If the user has forgotten the release code, it can be made visible again by entering the number sequence "5864". Factory setting: 0</li></ul> |

#### $\textbf{Expert} \rightarrow \textbf{System} \rightarrow \textbf{Instrument info}$

| Parameter name                     | Description  |
|------------------------------------|--|
| Cust. tag number (254)             | Enter device tag e. g. TAG number (max. 8 alphanumeric characters).              |
| Entry                              | Factory setting:   |
|                                    | no entry or as per order specifications  |
| Device tag (022)                   | Enter device tag e. g. TAG number (max. 32 alphanumeric characters).             |
| Entry                              | Factory setting:   |
|                                    | no entry or as per order specifications  |
| Serial number (096)                | Displays the serial number of the device (11 alphanumeric characters).           |
| Display                            |  |
| Firmware version (095)             | Displays the firmware version.   |
| Display                            |  |
| Ext. order code (097)              | Enter the extended order code.   |
| Display                            | Factory setting:   |
|                                    | As per order specifications  |
| Order identifier (098)             | Enter the order identifier.  |
| Entry                              | Factory setting:   |
|                                    | As per order specifications  |
| ENP version (099)                  | Displays the ENP version   |
| Display                            | (ENP = electronic nameplate)   |
| Electr. serial no. (121)           | Displays the serial number of the main electronics (11 alphanumeric characters). |
| Display                            |  |
| Sensor serial no. (122)<br>Display | Displays the serial number of the sensor (11 alphanumeric characters).           |

#### $\textbf{Expert} \rightarrow \textbf{System} \rightarrow \textbf{Display}$

| Parameter name         | Description   |
|------------------------|---|
| Language (000)         | Select the menu language for the local display.                                     |
| Selection              | Options:  |
|                        | • English   |
|                        | Optionally one further language (as selected when ordering the device)              |
|                        | <ul> <li>One further language (language of the producing factory)</li> </ul>        |
|                        | Factory setting:  |
|                        | English   |
| Display mode (001)     | Specify the contents for the first line of the local display in the measuring mode. |
| Selection              | Options:  |
|                        | Primary value (PV)  |
|                        | External value  |
|                        | All alternating   |
|                        | Factory setting:  |
|                        | Primary value (PV)  |
| Add. disp. value (002) | Specify the contents for the second line of the local display in the measuring      |
| Selection              | mode.   |
|                        | Options:  |
|                        | No value  |
|                        | Pressure  |
|                        | Main value (%)  |
|                        | Current   |
|                        | Temperature   |
|                        | The options depend on the measuring mode chosen.                                    |
|                        | Factory setting:  |
|                        | No value  |
| Format 1st value (004) | Specify the number of places after the decimal point for the value displayed in the |
| Selection              | main line.  |
|                        | Options:  |
|                        | Auto  |
|                        | • X   |
|                        | • X.X   |
|                        | • X.XX  |
|                        | • X.XXX   |
|                        | • X.XXXX  |
|                        | • X.XXXXX   |
|                        | Factory setting:  |
|                        | Auto  |

#### $\textbf{Expert} \rightarrow \textbf{System} \rightarrow \textbf{Management}$

| Parameter name         | Description   |
|------------------------|---|
| Enter reset code (124) | Reset parameters completely or partially to the factory values or order   |
| Entry                  | configuration,  |
|                        | see $\rightarrow \triangleq$ 36, "Resetting to factory settings (reset)". |
|                        | Factory setting:  |
|                        | 0   |

### 10.2.2 Measurement

#### $\textbf{Expert} \rightarrow \textbf{Measurement}$

| Parameter name                    | Description   |
|-----------------------------------|---|
| Measuring mode (005)<br>Selection | Select the measuring mode.<br>The operating menu is structured differently depending on the measuring mode selected.  |
|                                   | NOTICE<br>If the measuring mode is changed, no conversion takes place. If necessary, the<br>device has to be recalibrated after the measuring mode has been changed.<br>Options:<br>• Pressure<br>• Level<br>Factory setting<br>Pressure or as per order specifications |

#### $\textbf{Expert} \rightarrow \textbf{Measurement} \rightarrow \textbf{Basic setup}$

| Parameter name   | Description   |
|--|---|
| Pos. zero adjust (007)   | Position adjustment – the pressure difference between zero (set point) and the  |
| Selection  | measured pressure need not be known.  |
|  | Example:  |
|  | <ul> <li>Measured value = 2.2 mbar (0.033 psi)</li> </ul>   |
|  | • You correct the measured value via the "Pos. zero adjust" parameter with the  |
|  | "Confirm" option. This means that you are assigning the value 0.0 to the  |
|  | pressure present.   |
|  | <ul> <li>Measured value (after pos. zero adjust) = 0.0 mbar</li> </ul>  |
|  | The current value is also corrected.  |
|  | Factory setting:  |
|  | Abort   |
| Calib. offset (192)/(008)  | Position adjustment – the pressure difference between the set point and the   |
| (absolute pressure   | measured pressure must be known.  |
| sensor)  | Example:  |
| Selection  | <ul> <li>Measured value = 982.2 mbar (14.73 psi)</li> </ul>   |
|  | You correct the measured value with the value entered (e. g. 2.2 mbar   |
|  | (0.033 psi)) via the "Calib. offset" parameter. This means that you are assigning   |
|  | the value 980.0 (14.7 psi) to the pressure present.   |
|  | <ul> <li>Measured value (after pos. zero adjust) = 980.0 mbar (14.7 psi)</li> </ul>   |
|  | The current value is also corrected.  |
|  | Factory setting:  |
|  | 0.0   |
| Damping switch (164)   | Displays the switch position of DIP switch 4 which is used to switch the damping  |
| Display  | of the output signal on and off.  |
|  | Display:  |
|  | • Off   |
|  | The output signal is not damped.  |
|  | • On  |
|  | The output signal is damped. The attenuation constant is specified in the   |
|  | "Damping value" parameter (017) (184)   |
|  | Factory setting   |
|  | On  |
|  |   |
| Damping value (017)  | Enter the damping time (time constant $\tau$ ). The damping affects the speed at  |
| Damping value (017)<br>Entry   | which the measured value reacts to changes in pressure.   |
|  | which the measured value reacts to changes in pressure. Input range:  |
|  | which the measured value reacts to changes in pressure.<br><b>Input range:</b><br>0.0 s to 999.0 s  |
|  | which the measured value reacts to changes in pressure.<br><b>Input range:</b><br>0.0 s to 999.0 s<br><b>Factory setting:</b>   |
| Entry  | which the measured value reacts to changes in pressure.<br><b>Input range:</b><br>0.0 s to 999.0 s  |
|  | which the measured value reacts to changes in pressure.<br>Input range:<br>0.0 s to 999.0 s<br>Factory setting:<br>2.0 or as per order specifications<br>Select the pressure unit.  |

#### $\textbf{Expert} \rightarrow \textbf{Measurement} \rightarrow \textbf{Pressure}$

| Parameter name                         | Description   |
|--|---|
| Switch P1/P2 (163)<br>Display          | Indicates whether the "SW/P2High" DIP switch (DIP switch 5) is switched on.   |
|  | <b>NOTICE</b><br>The "SW/P2High" DIP switch determines which pressure input corresponds to the high-pressure side.  |
|  | <ul> <li>Display:</li> <li>SW setting "SW/P2 High" is switche off: The "High pressure side" (006) parameter determines which pressure input corresponds to the high-pressure side.</li> <li>P0.1 Lish</li> </ul>  |
|  | <ul> <li>P2 High         "SW/P2 High" is switched on: Pressure input P2 corresponds to the high-         pressure side, independent of the setting in the "High pressure side" (006)         parameter.</li> <li>Factory setting:         SW setting</li> </ul> |
| High pressure side<br>(006) (183)      | Determines, which pressure input corresponds to the high-pressure side.   |
| Selection                              | NOTICE<br>This setting is only valid if the "SW/P2High" DIP switch is in the OFF position (see<br>the "Pressure side switch" (163) parameter). Otherwise P2 corresponds to the<br>high-pressure side in any case.<br>Selection:<br>• P1 High                    |
|  | <ul> <li>Pressure input P1 is the high-pressure side.</li> <li>P2 High<br/>Pressure input P2 is the high-pressure side.</li> <li>Factory setting<br/>P1 High</li> </ul>   |
| Set LRV (013)<br>Display               | Set the lower-range value – without reference pressure.<br>Enter the pressure value for the lower current value (4 mA).<br><b>Factory setting:</b><br>0.0 or as per order specifications  |
| Set URV (014)<br>Display               | Set the upper-range value – without reference pressure.<br>Enter the pressure value for the upper current value (20 mA).<br>Factory setting:<br>Upper range limit sensor or as per order specifications.  |
| <b>Meas. pressure (020)</b><br>Display | Displays the measured pressure after sensor recalibration, position adjustment and damping.   |
|  | Simulation value<br>Pressure Pressure   |
|  | Sensor trim Sensor Corrected Pressure Measuring pressure Press. af. damp pressure   |
| Sensor pressure (109)<br>Display       | Displays the measured pressure before the sensor trim and position adjustment.  |
| Corrected press. (172)<br>Display      | Displays the measured pressure after sensor trim and position adjustment.   |
| Pressure af. damp<br>(111)<br>Display  | Displays the measured pressure after sensor trim, position adjustment and damping.  |

## $\textbf{Expert} \rightarrow \textbf{Measurement} \rightarrow \textbf{Level}$

| Parameter name                 | Description   |
|--------------------------------|---|
| Level selection (024)          | Select the method for calculating the level   |
| Selection                      | Options:  |
|                                | In pressure   |
|                                | If this option is selected, specify two pressure/level value pairs. The level value |
|                                | is displayed directly in the unit that you select via the "Output unit" parameter.  |
|                                | In height   |
|                                | If this option is selected, specify two height/level value pairs. From the          |
|                                | measured pressure, the device first calculates the height using the density.        |
|                                | This information is then used to calculate the level in the "Output unit" selected  |
|                                | using the two value pairs specified.  |
|                                | Factory setting:  |
|                                | In pressure   |
| Output unit (025)              | Select the unit for the measured value display for the level before linearization.  |
| Selection                      |   |
|                                | NOTICE  |
|                                | The unit selected is only used to describe the measured value. This means that      |
|                                | the measured value is not converted when a new output unit is selected.             |
|                                | Example:  |
|                                | Current measured value: 0.3 ft  |
|                                | New output unit: m  |
|                                | New measured value: 0.3 m   |
|                                | Options   |
|                                | • %   |
|                                | • mm, cm, dm, m   |
|                                | • ft, inch  |
|                                | • m <sup>3</sup> , in <sup>3</sup>  |
|                                | <ul> <li>I, hI</li> <li>ft<sup>3</sup></li> </ul>                                   |

|   | • "Calibration mode" = Dry → entry<br>Factory setting:   |   |
| Density unit (127)                                | Upper-range limit (URL) is converted to a height unit<br>Displays the density unit. The measured pressure is converted to a height using   | _ |
| Display   | the "Height unit", "Density unit" and "Adjust density" parameters.<br>Factory setting:<br>g/cm <sup>3</sup>  |   |
| Adjust density (034)<br>Entry                     | Enter the density of the medium. The measured pressure is converted to a height using the "Height unit" and "Adjust density" parameters.<br>Factory setting:   | ſ |
| Linuy   |  |   |

| Parameter name                     | Description  |
|------------------------------------|--|
| Process density (035)<br>Entry     | Enter a new density value for density correction.<br>The calibration was carried out with water as the medium, for example. Now the<br>container is to be used for another medium with another density. The calibration is<br>corrected appropriately by entering the new density value in the "Process density"<br>parameter.   |
|                                    | <b>NOTICE</b><br>If you change to dry calibration after a wet calibration using the "Calibration mode" parameter, the density for the "Adjust density" and "Process density" parameters must be entered correctly before changing the calibration mode. If the pressure falls with increasing levels, such as in the case of residual volume measurement, a negative value must be entered for this parameter.<br><b>Factory setting:</b><br>1.0 |
| Level before lin. (019)<br>Display | Displays the level value prior to linearization.   |

## $\textbf{Expert} \rightarrow \textbf{Measurement} \rightarrow \textbf{Linearization}$

| Parameter name                     | Description   |
|------------------------------------|---|
| Lin. mode (037)<br>Selection       | <ul> <li>Select the linearization mode.</li> <li>Options: <ul> <li>Linear</li> <li>The level is output without being converted beforehand. "Level before lin. (019)" is output.</li> <li>Erase table</li> <li>The existing linearization table is deleted.</li> <li>Manual entry (sets the table to the edit mode, an alarm is output):<br/>The value pairs of the table ("X-value (193/040)" and "Y-value (041)") are entered manually.</li> <li>Semiautomatic entry (sets the table to the edit mode, an alarm is output):<br/>The container is emptied or filled in stages in this entry mode. The device automatically records the level value ("X-value (193/040)"). The associated volume, mass or %-value is entered manually ("Y-value (041)").</li> <li>Activate table</li> <li>The table entered is activated and checked with this option. The device shows the level after linearization.</li> </ul> </li> <li>Factory setting:<br/>Linear</li> </ul> |
| Unit after lin. (038)<br>Selection | Select the volume unit (unit of the Y-value).<br>Options:<br>• %<br>• cm, dm, m, mm<br>• hl<br>• in <sup>3</sup> , ft <sup>3</sup> , m <sup>3</sup><br>• l<br>• in, ft<br>• kg, t<br>• lb<br>• gal<br>• lgal<br>Factory setting:<br>%   |
| Line numb. (039)<br>Entry          | Enter the number of the current point in the table.<br>The subsequent entries for "X-value" and "Y-value" refer to this point.<br>Input range:<br>1 to 32   |
| X-value (193/040)<br>Display/Entry | <ul> <li>Enter the level value for the specific point in the table and confirm.</li> <li>NOTICE</li> <li>If "Lin. mode" = "Manual", the level value has to be entered.</li> <li>If "Lin. mode" = "Semiautomatic", the level value is displayed and has to be confirmed by entering the associated Y-value.</li> </ul>   |
| <b>Y-value (041)</b><br>Entry      | Enter the output value for the specific point in the table.<br>The unit is determined by "Unit after lin. (038)".<br><b>NOTICE</b><br>The linearization table must be monotonic (increasing or decreasing).   |

| Parameter name         | Description  |
|------------------------|--|
| Edit table (042)       | Select the function for entering the table.  |
| Selection              | Options:   |
|                        | Next point: enter the next point.  |
|                        | • Current point: stay on the current point to correct a mistake for example.   |
|                        | • Previous point: skip back to the previous point to correct a mistake for example.  |
|                        | <ul> <li>Insert point: insert an additional point (see example below).</li> </ul>  |
|                        | • Delete point: delete the current point (see example below).  |
|                        | Example: Add a point - in this case between the 4th and 5th point for example  |
|                        | <ul> <li>Select point 5 via the "Line-numb." parameter.</li> </ul>   |
|                        | <ul> <li>Select the "Insert point" option via the "Edit table" parameter.</li> </ul>   |
|                        | <ul> <li>Point 5 is displayed for the "Line-numb" parameter. Enter new values for the "X-value" and "Y-value" parameters.</li> </ul> |
|                        | Example: Delete a point - in this case the 5th point for example   |
|                        | <ul> <li>Select point 5 via the "Line-numb." parameter.</li> </ul>   |
|                        | <ul> <li>Select the "Delete point" option via the "Edit table" parameter.</li> </ul>   |
|                        | The 5th point is deleted. All of the subsequent points are moved up one  |
|                        | number i. e. following deletion, the 6th point becomes Point 5.  |
|                        | Factory setting:   |
|                        | Current point  |
| Tank description (173) | Enter the tank description (max. 32 alphanumeric characters)   |
| Entry                  |  |
| Tank content (043)     | Displays the level value after linearization.  |
| Display                |  |

## $\textbf{Expert} \rightarrow \textbf{Measurement} \rightarrow \textbf{Sensor limits}$

| Parameter name                     | Description                                   |
|------------------------------------|---|
| LRL sensor (101)<br>Display        | Displays the lower-range limit of the sensor. |
| <b>URL sensor (102)</b><br>Display | Displays the upper-range limit of the sensor. |

## $\textbf{Expert} \rightarrow \textbf{Measurement} \rightarrow \textbf{Sensor trim}$

| Parameter name                         | Description   |
|--|---|
| Lo trim measured (129)<br>Display      | Displays the reference pressure present to be accepted for the lower calibration point.   |
| Hi trim measured (130)<br>Display      | Displays the reference pressure present to be accepted for the upper calibration point.   |
| <b>Lo trim sensor (131)</b><br>Display | Sensor recalibration by entering a target pressure while simultaneously and automatically accepting a reference pressure present for the lower calibration point. |
| <b>Hi trim sensor (132)</b><br>Display | Sensor recalibration by entering a target pressure while simultaneously and automatically accepting a reference pressure present for the upper calibration point. |

## 10.2.3 Output

## $\textbf{Expert} \rightarrow \textbf{Output} \rightarrow \textbf{Current output}$

| Parameter name                           | Description  |
|--|--|
| Output current (054)<br>Display          | Displays the current value of the current.   |
| Alarm behav. P (050)<br>Selection        | <ul> <li>Configure the current output for when the sensor limits are undershot or overshot.</li> <li>Options: <ul> <li>Warning</li> <li>The device continues measuring. An error message is displayed.</li> </ul> </li> <li>Alarm <ul> <li>The output signal assumes a value that can be specified by the "Output fail mode" function.</li> <li>NAMUR <ul> <li>Lower sensor limit undershot: Current output = 3.6 mA</li> <li>Upper sensor limit overshot: Current output assumes value of 21 mA to 23 mA, depending on the setting of the "High alarm curr. (052)" parameter.</li> </ul> </li> <li>Factory setting: <ul> <li>Warning</li> </ul> </li> </ul></li></ul> |
| Alarm cur. switch (165)                  | Displays the switch status of DIP switch 3 "SW/alarm min."<br>Display<br>• AF  |
|  | <ul> <li>The alarm current has the value defined in the "Output fail mode (190)".</li> <li>Alarm min.</li> <li>The alarm current is 3.6 mA regardless of the software setting.</li> </ul>  |
| Output fail mode (190)<br>Selection      | <ul> <li>Select the output fail mode.</li> <li>In the event of an alarm, the current assumes the current value specified with this parameter.</li> <li>Options: <ul> <li>Max. (110%): can be set from 21 mA to 23 mA</li> <li>Max: can be set from 21 mA to 23 mA → see also "High alarm curr. (052)"</li> <li>Hold: last measured value is held</li> <li>Min. (-10%): 3.6 mA</li> </ul> </li> <li>Factory setting:<br/>Max. alarm 110% (22 mA)</li> </ul>   |
| High alarm curr. (052)<br>Entry          | Enter the current value for the high alarm current.<br>→ See also "Output fail mode (190)".<br>Input range:<br>21 mA to 23 mA<br>Factory setting:<br>22 mA   |
| Set min. current (053)<br>Entry          | Enter the lower current limiting value.<br>Some switching units do not accept current values lower than 4.0 mA.<br>Options:<br>• 3.8 mA<br>• 4.0 mA<br>Factory setting:<br>3.8 mA  |
| Get LRV (015)<br>Entry                   | Set the lower-range value – reference pressure is present at the device.<br>The pressure for the lower current value (4 mA) is present at the device. With the<br>"Confirm" option, you assign the lower current value to the pressure value<br>present.<br><b>Options:</b><br>• Abort<br>• Confirm<br><b>Factory setting:</b><br>Abort  |
| Set LRV<br>(056, 013, 166, 168)<br>Entry | <ul> <li>Set the pressure value for the lower current value (4 mA).</li> <li>Factory setting:</li> <li>0.0 % in the level measuring mode;</li> <li>0.0 or in accordance with ordering specifications in the pressure measuring mode</li> <li>0.0 m<sup>3</sup>/h in the flow measureing mode</li> </ul>  |

| Parameter name         | Description   |
|------------------------|---|
| Get URV (016)          | Set the upper-range value – reference pressure is present at the device.  |
| Entry                  | The pressure for the upper current value (20 mA) is present at the device. With   |
|                        | the "Confirm" option, you assign the upper current value to the pressure value<br>present.  |
|                        | Options:  |
|                        | • Abort   |
|                        | Confirm   |
|                        | Factory setting:  |
|                        | Abort   |
| Set URV                | Set the pressure value for the upper current value (20 mA).   |
| (057, 014, 167, 169)   | Factory setting:  |
| Entry                  | 100.0 % in the level measuring mode;<br>URL sensor or in accordance with ordering information in the pressure measuring                               |
|                        | mode  |
| Startcurrent (134)     | Use this function to enter the start current.   |
| Entry                  | This setting is also effective in the HART multidrop mode.  |
| ,                      | Options:  |
|                        | • 12 mA   |
|                        | Max Alarm (22 mA, non-adjustable)   |
|                        | Factory setting:  |
| O                      | 12 mA   |
| Curr. trim 4mA (135)   | Enter the current value for the lower point (4 mA) of the current linear regression line.   |
| Entry                  | You can adapt the current output to the transmission conditions with this   |
|                        | parameter and "Curr. trim 20mA (136)".  |
|                        | Perform the current trim for the lower point as follows:  |
|                        | 1. Select the "Current" option in the "Simulation mode" parameter.  |
|                        | 2. Set the 4mA value in the "Sim. current" parameter.   |
|                        | 3. Enter the current value measured with the switching unit in the "Curr. trim 4mA"   |
|                        | parameter.  |
|                        | Input range:<br>Measured current ±0.2 mA  |
|                        | Factory setting:  |
|                        | 4 mA  |
| Curr. trim 20mA (136)  | Enter the current value for the upper point (20 mA) of the current linear regression  |
| Entry                  | line.   |
|                        | You can adapt the current output to the transmission conditions with this   |
|                        | parameter and "Curr. trim 4mA (135)".   |
|                        | Perform the current trim for the lower point as follows:  |
|                        | <ol> <li>Select the "Current" option in the "Simulation mode" parameter.</li> <li>Enter the "20 mA" value in the "Sim. current" parameter.</li> </ol> |
|                        | 3. Enter the current value measured with the switching unit in the "Curr. trim  |
|                        | 20mA" parameter.  |
|                        | Input range:  |
|                        | Measured current ±0.2 mA  |
|                        | Factory setting:  |
|                        | 20 mA   |
| Offset trim 4mA (137)  | Displays the difference between 4 mA and the value entered for the "Curr. trim  |
| Display                | 4mA (135)" parameter.<br>Factory setting:   |
|                        | 0   |
| Offset trim 20mA (138) | Displays the difference between 20 mA and the value entered for the "Curr. trim   |
| Display                | 20mA (136)" parameter.  |
|                        | Factory setting:  |
|                        | 0   |

## 10.2.4 Communication

## $\textbf{Expert} \rightarrow \textbf{Communikation} \rightarrow \textbf{HART config}$

| Parameter name     | Description   |
|--------------------|---|
| Burst mode (142)   | Switch the burst mode on and off.   |
| Selection          | Options:  |
|                    | • On  |
|                    | • Off   |
|                    | Factory setting:  |
|                    | On  |
| Burst option (143) | Use this parameter to specify what HART command is sent to the master.      |
| Entry              | Options:  |
|                    | • 1 (HART command 1)  |
|                    | 2 (HART command 2)  |
|                    | • 3 (HART command 3)  |
|                    | • 9 (HART command 9)  |
|                    | • 33 (HART command 33)  |
|                    | Factory setting:  |
|                    | 1 (HART command 1)  |
| Current mode (144) | Configure the current mode for HART communication.                          |
| Selection          | Options:  |
|                    | Signaling   |
|                    | Measured value transmitted by the current value                             |
|                    | • Fixed   |
|                    | Fixed current 4.0 mA (multidrop mode)                                       |
|                    | (measured value only transmitted via HART digital communication)            |
|                    | Factory setting   |
|                    | Signaling   |
| Bus address (145)  | Enter the address for exchanging data via the HART protocol.                |
| Entry              | (HART 5.0 master: Range 0 to 15, where address = 0 calls up the "Signaling" |
|                    | setting; HART 6.0 master: range 0 to 63)                                    |
|                    | Factory setting:  |
|                    | 0   |
| Preamble number    | Enter the number of preambles in the HART protocol. (Synchronization of the |
| (146)              | modem modules along a transmission path, each modem module could            |
| Entry              | "swallow" one byte; at least 2 bytes must be preambles.)                    |
|                    | Input range:  |
|                    | 2 to 20   |
|                    | Factory setting:  |
|                    | 5   |

 $\textbf{Expert} \rightarrow \textbf{Communication} \rightarrow \textbf{HART} \text{ info}$ 

| Parameter name                           | Description  |
|--|--|
| <b>Device type code (105)</b><br>Display | Displays the numeric ID of the device.<br>• for LHCR-51, LHCR-51: 35<br>• for LHC-M51, PPC-M51: 25                             |
| Device revision (108)<br>Display         | Displays the device revision, e. g.: 1   |
| Manufacturer ID (103)<br>Display         | Displays the manufacturer number in decimal numerical format. Here: 17   |
| HART revision (180)<br>Display           | Displays the HART revision. Here: 6  |
| Descriptor (139)<br>Entry                | Enter the tag description (max. 16 alphanumeric characters).   |
| HART message (140)<br>Entry              | Enter a message (max. 32 alphanumeric characters).<br>This message is sent via the HART protocol at the request of the master. |
| HART date (141)<br>Entry                 | Enter the date of the last change in configuration.<br>Factory setting:<br>DD/MM/YY (date of the final test)                   |

## $\textbf{Expert} \rightarrow \textbf{Communication} \rightarrow \textbf{HART} \text{ output}$

| Parameter name                        | Description   |
|---------------------------------------|---|
| Primary value is (147)<br>Display     | Indicates which measured variable is transmitted as the primary process value<br>via the HART protocol.<br>The variable displayed depends on the "Measuring mode (005)" selected:<br>• "Pressure" measuring mode: "Meas. pressure"<br>• "Level" measuring mode, "Linear" lin. mode: "Level before lin."<br>• "Level" measuring mode, "Activate table" lin. mode: "Tank content" |
| <b>Primary value (148)</b><br>Display | Displays the primary process value.   |
| Secondary val. is (149)<br>Display    | Secondary value. Displays the assignment.<br>The following process values can be displayed depending on the measuring<br>mode selected:<br>• "Meas. pressure"<br>• "Sensor pressure"<br>• "Corrected press."<br>• "Pressure af. damp"<br>• "Sensor temp."<br>• "Level before lin."<br>• "Tank content"  |
| Secondary value (150)<br>Display      | Displays the secondary process value.   |
| Third value is (151)<br>Display       | Third process value. Displays the assignment.<br>The variable displayed depends on the measuring mode selected, see also<br>"Secondary val. is (149)".  |

|                        | • X.XXXXX   |
|                        | Factory setting:  |
|                        | х.х   |

# TDOCT-3000\_ENG 255823 04/2013

## 10.2.5 Application

## $\textbf{Expert} \rightarrow \textbf{Application}$

| Parameter name                  | Description  |
|---------------------------------|--|
| Electr. delta P (158)<br>Entry  | For switching the electr. delta P application on or off with an external or constant value.<br><b>Options:</b><br>• Off<br>• External value<br>• Constant<br><b>Factory setting:</b> |
| Fixed ext. value (174)<br>Entry | Off<br>Use this function to enter the constant value.<br>The value refers to "HART input unit".<br>Factory setting:<br>0.0   |

## 10.2.6 Diagnosis

## $\textbf{Expert} \rightarrow \textbf{Diagnosis}$

| Parameter name                          | Description  |
|---|--|
| <b>Diagnostic code (071)</b><br>Display | Displays the diagnostic message with the highest priority currently present.   |
| Last diag. code (072)<br>Display        | <ul> <li>Displays the last diagnostic message that occurred and was rectified.</li> <li>NOTICE</li> <li>Digital communication: the last message is displayed.</li> <li>The messages listed in the "Last diag. code" parameter can be deleted via the "Reset logbook" parameter.</li> </ul> |
| Reset logbook (159)<br>Selection        | <ul> <li>With this parameter, you reset all the messages of the "Last diag. code" parameter and the "Last diag. 1" to "Last diag. 10" event log.</li> <li>Options: <ul> <li>Abort</li> <li>Confirm</li> </ul> </li> <li>Factory setting: <ul> <li>Abort</li> </ul> </li> </ul>             |
| Min. meas. press. (073)<br>Display      | Displays the lowest pressure value measured (peakhold indicator). You can reset this indicator by means of the "Reset peakhold" parameter.   |
| Max. meas. press.<br>(074)<br>Display   | Displays the highest pressure value measured (peakhold indicator). You can reset this indicator by means of the "Reset peakhold" parameter.  |
| Reset peakhold (161)<br>Selection       | You can reset the "Min. meas. press." and "Max. meas. press." indicators with this parameter.<br><b>Options:</b><br>• Abort<br>• Confirm<br><b>Factory setting:</b><br>Abort   |
| <b>Operating hours (162)</b><br>Display | Displays the hours of operation. This parameter cannot be reset.   |
| Config. counter (100)<br>Display        | Displays the configuration counter.<br>This counter is increased by one every time a parameter or group is changed.<br>The counter counts up to 65535 and then starts again at zero.   |

## $\textbf{Expert} \rightarrow \textbf{Diagnosis} \rightarrow \textbf{Diagnostic list}$

| Parameter name      | Description  |
|---------------------|--|
| Diagnostic 1 (075)  | These parameters contain up to ten diagnosis messages that are currently |
| Diagnostic 2 (076)  | pending, arranged in order of priority.                                  |
| Diagnostic 3 (077)  |  |
| Diagnostic 4 (078)  |  |
| Diagnostic 5 (079)  |  |
| Diagnostic 6 (080)  |  |
| Diagnostic 7 (081)  |  |
| Diagnostic 8 (082)  |  |
| Diagnostic 9 (083)  |  |
| Diagnostic 10 (084) |  |

## $\textbf{Expert} \rightarrow \textbf{Diagnosis} \rightarrow \textbf{Event logbook}$

| Parameter name      | Description   |
|---------------------|---|
| Last diag. 1 (085)  | These parameters contain the last 10 diagnosis messages to occur and be |
| Last diag. 2 (086)  | rectified.  |
| Last diag. 3 (087)  | They can be reset with the "Reset logbook" parameter.                   |
| Last diag. 4 (088)  | Errors which have occurred multiple times are displayed once only.      |
| Last diag. 5 (089)  |   |
| Last diag. 6 (090)  |   |
| Last diag. 7 (091)  |   |
| Last diag. 8 (092)  |   |
| Last diag. 9 (093)  |   |
| Last diag. 10 (094) |   |

## $\textbf{Expert} \rightarrow \textbf{Diagnosis} \rightarrow \textbf{Simulation}$

| Parameter name                     | Description  |
|------------------------------------|--|
|                                    |  |
| Simulation mode (112)<br>Selection | Switch on simulation and select the simulation mode.<br>Any simulation running is switched off if the measuring mode or level type "Lin.<br>mode (037)" is changed.<br><b>Options:</b><br>• None<br>• Pressure, → see also this table, "Sim. pressure" parameter<br>• Level, → see this table, "Sim. level" parameter<br>• Tank content, → see this table, "Sim. tank cont." parameter<br>• Current, → see this table, "Sim. current" parameter<br>• Alarm/warning, → see this table, "Sim. error no." parameter<br>• Alarm/warning, → see this table, "Sim. error no." parameter<br>• Sensor • Sensor • Position adjust- • Damping • P • Level • Current output |
|                                    | Factory setting:       None  |
| Sim. pressure (113)                | Enter the simulation value.  |
| Entry                              | $\rightarrow$ See also "Simulation mode".  |
|                                    | Prerequisite:<br>"Simulation mode" = Pressure  |
|                                    | Simulation mode = Pressure   |
|                                    | Current pressure measured value  |
| Sim. level (115)                   | Enter the simulation value.  |
| Entry                              | $\rightarrow$ See also "Simulation mode".  |
|                                    | Prerequisite:  |
| Dim tonk cost (110)                | "Measuring mode" = Level and "Simulation mode" = Level   |
| Sim. tank cont. (116)<br>Entry     | Enter the simulation value.<br>$\rightarrow$ See also "Simulation mode".   |
|                                    | Prerequisites:   |
|                                    | "Measuring mode" = Level, "Activate table" lin. mode and "Simulation mode" =   |
|                                    | Tank content.  |
| Sim. current (117)                 | Enter the simulation value.  |
| Entry                              | → See also "Simulation mode". Prerequisite:  |
|                                    | "Simulation mode"= Current value   |
|                                    | Factory setting:   |
|                                    | Current value of the current   |
| Sim. error no. (118)               | Enter the diagnostic message number.   |
| Entry                              | → See also "Simulation mode". Prerequisite:  |
|                                    | "Simulation mode"= Alarm/warning   |
|                                    | Switch on value:   |
|                                    | 484 (simulation active)  |
