At this position, an option (number or letter) selected from the specification is displayed instead of the placeholders.

Basic specifications

The features that are absolutely essential for the device (mandatory features) are specified in the basic specifications. The number of positions depends on the number of features available.

The selected option of a feature can consist of several positions.

Optional specifications

The optional specifications describe additional features for the device (optional features). The number of positions depends on the number of features available.

More detailed information about the device is provided in the following tables. These tables describe the individual positions and IDs in the extended order code which are relevant to hazardous locations.

Safety instructions:
General

- Staff must meet the following conditions for mounting, electrical installation, commissioning and maintenance of the device:
 - Be suitably qualified for their role and the tasks they perform
 - Be trained in explosion protection
 - Be familiar with national regulations (e. g. IEC/EN 60079-14)
- Install the device according to the manufacturer's instructions and national regulations.
- Do not operate the device outside the specified electrical, thermal and mechanical parameters.
- Only use the device in media to which the wetted materials have sufficient durability.
- Avoid electrostatic charging:
 - Of plastic surfaces (e. g. housing, sensor element, special varnishing , attached additional plates, ...)
 - Of isolated capacities (e. g. isolated metallic plates)
- Refer to the temperature tables for the relationship between the permitted ambient temperature for the sensor and/or transmitter, depending on the range of application, and the temperature class.
- Modifications to the device can affect the explosion protection and must be carried out by staff authorized to perform such work by Pepperl+Fuchs.
- When replacing the probe electronics or opening the connection between the remote cable and the probe, a jumper plug must be used or a short-circuit must be established between the probe contact and the potential equalization conductor to avoid electrostatically charging the probe.
- After mounting and connecting the probe, ingress protection of the housing must be at least IP65 in accordance with EN 60529.
Perform the following to achieve the degree of protection:
 - Screw the cover tight.
 - Mount the cable entry correctly.

Safety instructions:
Special conditions

- Permitted ambient temperature range at the electronics housing: $-40\text{ °C} \leq T_{\text{amb}} \leq +80\text{ °C}$.
Observe the information in the temperature tables.
- In the case of process connections made of polymeric material or with polymeric coatings, avoid electrostatic charging of the plastic surfaces.
 - In the event of additional or alternative special varnishing on the housing or other metal parts:
 - Observe the danger of electrostatic charging and discharge.
 - Do not rub surfaces with a dry cloth.

- After aligning (rotating) the housing, retighten the fixing screw (see Operating Instructions).
- When mounting the device:
 - Exclude any mechanical damage or friction during the application.
 - Pay particular attention to flow conditions and tank fittings.
- Continuous service temperature of the connecting cable: $-40\text{ °C} \dots \geq +85\text{ °C}$; in accordance with the range of service temperature taking into account additional influences of the process conditions ($T_{\text{amb, min}}$), ($T_{\text{amb, max}} + 20\text{ K}$).
- Only use certified cable entries or sealing plugs.
The metal sealing plugs supplied meet this requirement.
- Before operation:
 - Screw in the cover all the way.
 - Tighten the securing clamp on the cover.

Intrinsic safety

- The device can be connected to a service interface. Refer to the Operating Instructions

The power consumption of I/O modules with passive PFS output can be limited for certain applications.

- Recommended: Power consumption = 1 W.
This is obtained for a supply voltage at the terminals of 27 V DC.
- For higher supply voltages (U_{max}): Insert a serial resistance (R_V) in order to limit the power consumption, see table below.

Table for the PFS serial resistance (RV)

Power consumption	1.0 W
Total power consumption	1.88 W
Internal resistance R_i	760 Ω

27	0 Ω

Note!

For values associated with a higher or lower internal power consumption please contact Pepperl+Fuchs.
