Instruction Manual

Marking
K-System, Signal conditioners for Zone 2
Device identification

Model number
ATEX approval

Group, category, type of protection, temperature classification

The exact designation of the device can be found on the name plate on the device side.

Pepperl+Fuchs GmbH
Lilienthalstraße 200, 68307 Mannheim, Germany

Table 1

Target Group, Personnel
Responsibility for planning, assembly, commissioning, operation, maintenance, and dismantling lies with the plant operator.
Mounting, installation, commissioning, operation, maintenance and dismantling of the device may only be carried out by appropriate trained and qualified personnel. The instruction manual must be read and understood.
Prior to using the device you should make yourself familiar with the device and carefully read the instruction manual.

Reference to Further Documentation
Observe laws, standards, and directives applicable to the intended use and the operating location.
The corresponding data sheets, declarations of conformity, EC-type-examination certificates, certificates and control drawings if applicable supplement this document. You can find this information under www.pepperl-fuchs.com.

Intended Use
The device is only approved for appropriate and intended use. Ignoring these instructions will void any warranty and absolve the manufacturer from any liability.
The device is used in control and instrumentation technology (C&I technology) for the galvanic isolation of signals such as 20 mA and 10 V standard signals or alternatively for adapting or standardizing signals.
Use the device only within the specified ambient conditions.
The device is designed for mounting on a 35 mm DIN mounting rail according to EN 60715.
Only use the device stationary.
The device is an electrical apparatus for hazardous areas of Zone 2.

Improper Use
Protection of the personnel and the plant is not ensured if the device is not being used according to its intended use.
The device is not suitable for isolating signals in power installations unless this is noted separately in the corresponding datasheet.

Mounting and Installation
Do not mount a damaged or polluted device.
Mount the device in a way that the device is protected against mechanical hazard. Mount the device in a surrounding enclosure for example.
Do not mount the device in the dust hazardous area.
The device fulfills a degree of protection IP20 according to IEC/EN 60529.
The device must be installed and operated only in an environment that ensures a pollution degree 2 (or better) according to IEC/EN 60664-1.
If used in areas with higher pollution degree, the device needs to be protected accordingly.
All circuits connected to the device must comply with the overvoltage category II (or better) according to IEC/EN 60066-1.
Only use power supplies that provide protection against electric shock (e.g. SELV or PELV) for the connection to power feed modules.
Observe the installation instructions according to IEC/EN 60079-14.

Requirements for Cables and Connection Lines
Observe the following points when installing cables and connection lines:
Observe the permissible core cross-section of the conductor.
If you use stranded conductors, crimp wire end ferrules on the conductor ends.
Use only one conductor per terminal.
When installing the conductors the insulation must reach up to the terminal.
Observe the tightening torque of the terminal screws.
If the rated voltage is greater than 50 V AC, proceed as follows:
1. Switch off the voltage.
2. Connect the terminal blocks or disconnect the terminal blocks.

Requirements for Equipment Protection Level Gc
The device must be installed and operated only in surrounding enclosures that:
• comply with the requirements for surrounding enclosures according to IEC/EN 60079-0,
• are rated with the degree of protection IP54 according to IEC/EN 60529.

Connection or disconnection of any energized circuits is only permitted in the absence of a potentially explosive atmosphere.
Provide a transient protection. Ensure that the peak value of the transient protection does not exceed 140 % of the rated voltage.
Place warning label “Warning – Do not remove or replace fuse when energized!” visibly on the housing.

Operation, Maintenance, Repair
The devices must not be repaired, changed or manipulated. If there is a defect, the product must always be replaced with an original device.
If the rated voltage is greater than 50 V AC, proceed as follows:
1. Switch off the voltage.
2. Connect the terminal blocks or disconnect the terminal blocks.

Requirements for Equipment Protection Level Gc
Connection or disconnection of any energized circuits is only permitted in the absence of a potentially explosive atmosphere.
Only use operating elements in the absence of a potentially explosive atmosphere.
Only use the programming socket in the absence of a potentially explosive atmosphere.
Change the replaceable fuse, when the device is de-energized.

Delivery, Transport, Disposal
Check the packaging and contents for damage.
Check if you have received every item and if the items received are the ones you ordered.
Always store and transport the device in the original packaging.
Store the device in a clean and dry environment. The permitted ambient conditions (see datasheet) must be considered.
Disposing of device, packaging, and possibly contained batteries must be in compliance with the applicable laws and guidelines of the respective country.

Reference to Further Documentation
Observe laws, standards, and directives applicable to the intended use and the operating location.
The corresponding data sheets, declarations of conformity, EC-type-examination certificates, certificates and control drawings if applicable supplement this document. You can find this information under www.pepperl-fuchs.com.
