Product information

Small, robust, effective, and reliable - these are the properties of the ML7 sensor series. Due to their small size, number of versions, and two different lens positions, they are particularly suited for installation in tight spaces. The robust design and high quality of Pepperl+Fuchs mean they can also be used under harsh environmental conditions. The efficient technology, switching frequencies up to 1000 Hz, high resistance to ambient light, and 4-in-1 output make the series suitable for non-contact object detection.

Teach-In

Connect the sensors to operating voltage, the green LEDs green lights up constantly.

The receiver operates at max. sensitivity (delivery status) or with the last teached values.

- Mount transmitter and receiver opposite each other and align roughly.
- Adjust the transmitter to the receiver.
- Press the Teach-In button on the receiver - as an acknowledgement the green LED will quickly turn off one time.
- Press the Teach-In button on the receiver until both LEDs green and yellow are blinking in parallel (2 Hz). Release the Teach-In button now.
- While the green and yellow LEDs are blinking alternating (2 Hz) on the receiver the unit is in the internal set up procedure.
- **Teach-In successful:** Both LEDs green and yellow on the receiver are on. The unit is ready to use and in switching mode now.
- **Teach-In not successful:** Both LEDs on the receiver are flashing alternating (4 Hz) for approx. 5 seconds. Afterwards the sensor returns to max. sensitivity setting. Please retry the Teach-In procedure beginning by step 1.
