Photoelectric slot sensor GL80-RT/30/40a/98a

- Optimized for the detection of small parts
- High switching frequency
- Multiple device installation possible, no mutual interference (no cross-talk)
- Sensitivity adjuster and light-on/dark-on changeover switch as standard features of this series
- Visible red light
- Degree of protection IP67
- cULus approval
- Diecast zinc housing, powder coated

Photoelectric slot sensor, zinc pressure diecast housing, 80 mm slot width, red light, light/dark on, sensitivity adjuster, DC version, NPN output, 3-pin M8 plug

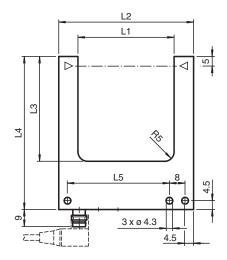

Function

Photoelectric slot sensors offer vast installation benefits thanks to their housing design. When it comes to operation, these new generation devices boast features such as high resolution, high repeatability, automatic signal threshold adjustment, ambient light resistance, and detection of and/or light transmission through transparent objects. Cross-talk protection enables parallel installation of devices despite extremely high switching frequency. These characteristics guarantee reliable detection of small parts, from 0.3 mm, across the entire detection range, even in very fast moving applications.

Dimensions

	L1	L2	L3	L4	L5

GL50	50	70	55	80	53
GL80	80	100	55	80	83

Technical Data

General specifications LED Light source Light type modulated visible red light Target size 0.3 mm Slot width 80 mm Slot depth 55 mm 100000 Lux Ambient light limit Functional safety related parameters 1290 a $MTTF_d$ Mission Time (T_M) 20 a Diagnostic Coverage (DC) 0 % Indicators/operating means Function indicator LED red in connector Control elements Sensitivity adjuster, light/dark switch **Electrical specifications** U_{B} 10 ... 30 V DC Operating voltage 10 % Ripple No-load supply current ≤ 15 mA Output Switching type light/dark on 1 NPN, short-circuit protected open collector Signal output Switching voltage max. 30 V DC Switching current max. 100 mA 0.05 mm Repeat accuracy Switching frequency f 3 kHz Response time ≤ 160 µs Conformity Product standard EN 60947-5-2 Approvals and certificates CE CE conformity **UL** approval cULus Listed, Class 2 Power Source, Type 1 enclosure CCC approval CCC approval / marking not required for products rated ≤36 V **Ambient conditions** -20 ... 60 °C (-4 ... 140 °F) Ambient temperature -20 ... 75 °C (-4 ... 167 °F) Storage temperature **Mechanical specifications** Degree of protection Connection M8 connector, 3-pin Material Housing powder coated diecast zinc Optical face glass Mass 125 g

Connection Assignment

- O = Light on
- = Dark on

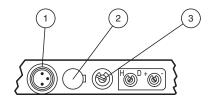

Connection Assignment

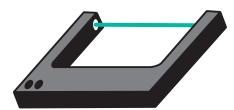

Wire colors in accordance with EN 60947-5-2

BN (brown) 3 BU (blue) BK (black)

Assembly

- Functional display red
- Light-/dark switch
- Sensitivity adjuster

Function Principle

Photoelectric slot sensors are photoelectric sensors that operate according to the thru-beam sensor principle. The transmitter sends signals directly to the receiver. If an object breaks the light beam, the switching element function is triggered. The special U-shaped design means the transmitter and receiver can be accommodated in one housing, which ensures high resistance to vibrations. In contrast to standard thru-beam sensors, photoelectric slot sensors have the added advantage of not requiring complex electrical installation, as only one device needs to be connected. Also, adjustment of the optical axes is not necessary.

Accessories

V3-WM-2M-PUR

Female cordset single-ended M8 angled A-coded, 3-pin, PUR cable grey

Application

- Small part detection, from object size 0.3 mm
- Can also be used for systems with strong vibrations
- Detection of small needles in transparent hollow needles
- Counting of small parts on conveyors
- Feed and correct separation verification
- Web edge control
- Elevator car position in elevators
