#### LS680-DA-EN/F2/146

Optical data coupler

## **Features**

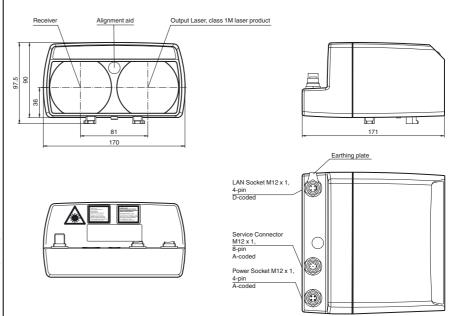

- Fast Ethernet; Powerlink; EtherCAT; Profinet
- · Independent of Ethernet protocol
- Version for low temperature applications
- · Plug connection for fast mounting
- No parameterization
- · Line indicator for signal strength

# **Product information**

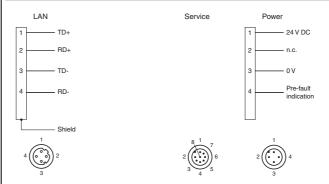

The optical data coupler serves as a connection of Ethernet modules to remote modules. These can move along an axis toward each other. The devices are optimized for conditions in high bay warehouses bays.

The physical transfer takes place protocolfree with 100 MBit/s full duplex. The data rate remains constant irrespective of distance. Telegrams are not saved, which enables immediate transfer.

#### **Function**

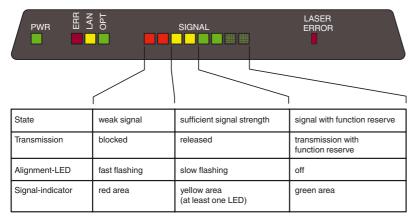

The LS68\*-DA-EN is a device for serial data transfer in Ethernet systems. One F1 and one F2 device is needed for each data transfer link.

#### Data transfer

Data is transferred in both directions by means of modulated light. The information at the input interface is modulated on the carrier signal. The information is then demodulated and issued on the output interface by the receiver.

### Function displays/function reserve

A red alignment LED, which can be seen from a long way off, is located on the front panel as an alignment aid. As soon as a receiver detects the transmitter light of the device opposite it, the flashing frequency of the alignment aid decreases. If the light goes out, this indicates that the devices are optimally aligned and sufficient function reserve is available. For fine adjustment, the optical data coupler also features a bar graph display (signal display) that facilitates optimum alignment.

#### Mounting

The device is mounted using appropriate accessories, e.g., OMH-LS610-01 for wall mounting.

The x-y adjuster is pre-assembled on delivery. It is fixed in the required beam direction (±90° rotation possible) on the mounting bracket.
