

Capacitive limit switch

LCL2

- Limit switch for bulk solids
- Device with rope probe
- Rope probe can be shortened for optimum matching to the measuring point
- Complete unit consisting of the probe and electronic insert
- Integrated active build-up compensation: exact switch point, even with strong build-up
- Mechanically rugged: no wearing parts, long operating life, maintenance-free

Function

The capacitive limit switch is designed for limit detection of light bulk solids, e. g. grain products, flour, milk powder, animal feed, cement, chalk or plaster.
Versions:

- Device with rope probe up to 6 m (20 feet), for bulk solids
- Relay output (potential-free change-over contact) with AC or DC connection
- PNP output with 3-wire DC connection

Connection

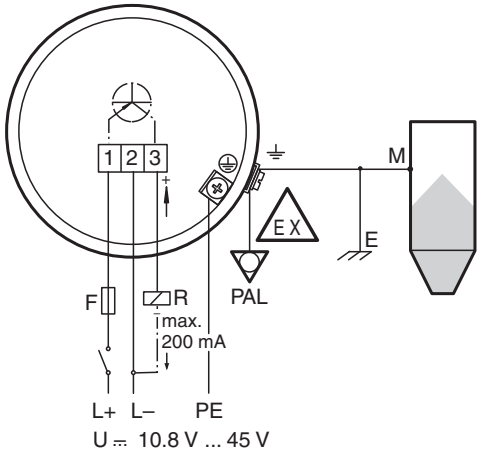

Connection type E5, 3-wire DC connection (example)

3-wire DC connection

F: Fine-wire fuse, 500 mA
R: connected load, e. g. PLC, DCS, relay
M: Connection to ground, silo or metal parts silo
E: Grounding

The LCL is protected against reverse polarity. In case of mixing up the connections, the green LED does not illuminate "ready to operate".

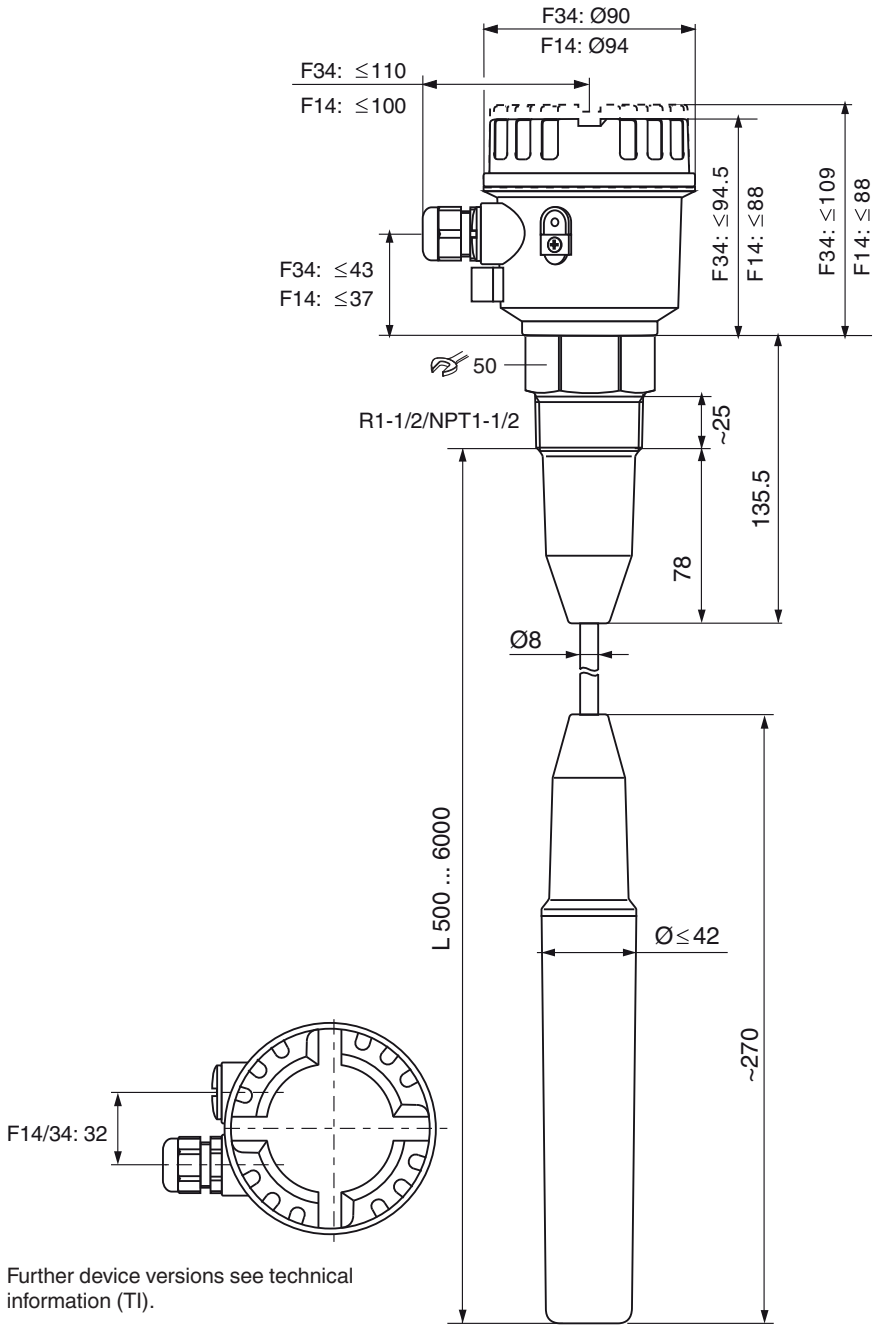

PE-connection and PAL-connection for LCL1 are unnecessary.

Other connection types see section electrical connection.

Release date: 2025-08-14 Date of issue: 2025-08-14 Filename: 271956_eng.pdf

Dimensions

Further device versions see technical information (TI).

Technical Data

General specifications	
Measuring method	A metal plate at the end of the probe, within the insulation, and the surroundings (e. g. the silo walls) combine to form the two electrodes of a capacitor. If the probe is covered or free of material, then the capacitance changes and the LCL switches.
Equipment architecture	The measuring system consists of: - the device - a supply point - the connected control systems, switching units, signalling systems (e. g. lamps, horns, PCS, PLC, etc.)
Construction type	device with rope probe

Release date: 2025-08-14 Date of issue: 2025-08-14 Filename: 271956_eng.pdf

Technical Data

Operating mode		MAX = maximum safety: The device switches if the probe is covered or if the supply voltage is disconnected in a safety-oriented manner (signal on alarm). example application: overspill protection MIN = minimum safety: The device switches if the probe is uncovered or if the supply voltage is disconnected in a safetyoriented manner (signal on alarm). example application: dry-running protection
Series		LCL2
Supply		
Rated voltage	U_r	electrical connection E5: 10.8 ... 45 V DC, short-term pulse on 55 V DC electrical connection WA: 20 ... 235 V AC, 50/60 Hz or 20 ... 55 V DC
Current consumption		electrical connection E5: max. 30 mA, reverse-polarity-proof electrical connection WA: max. 130 mA
Electrical specifications		
Surge protection		overvoltage category III
Input		
Measured variable		limit level (limit value)
Measuring range		dielectric constant ≥ 1.6
Output		
Switch-on delay	t_{on}	correct switching after max. 2 s
Output signal		connection E5: switching PNP, I_{max} = 200 mA - overload and short circuit protection - residual voltage at transistor at I_{max} < 2.9 V connection WA: contact change-over, potential-free - U_{max} = 253 V - I_{max} = 4 A (AC) - P_{max} = 1000 VA, cos ϕ = 1, P_{max} = 500 VA, cos ϕ > 0.7
Signal on alarm		connection E5: < 100 µA connection WA: relay de-energized
Directive conformity		
Electromagnetic compatibility		
Directive 2014/30/EU		EN 61326-1:2006 , EN 61326-2-3:2006
Low voltage		
Directive 2014/35/EU		EN 61010-1:2010
Conformity		
Electromagnetic compatibility		NE 21
Degree of protection		IEC 60529:2001
Vibration resistance		EN 60068-2-64
Climate class		EN 60068, part 2-38 (test Z/AD)
Measurement accuracy		
Reference operating conditions		vessel type: plastic vessel, ambient temperature: 73 °F (23 °C, 296 K), medium temperature: 73 °F (23 °C, 296 K) medium pressure p_e: 0 bar, medium: dielectric constant = 2.6, conductivity: < 1 µS sensitivity setting: C
Hysteresis		vertical 5 mm (0.2 inch)
Long-term drift		vertical 6 mm (0.24 inch)
Influence of medium temperature		depending on the filling material
Switching time		approx. 0.8 s when covering and uncovering the sensor
Operating conditions		
Installation conditions		
Installation position		vertically down
Mounting location		The capacitive limit switch can be installed in silos made of different materials (e. g. metal, plastic, concrete).
Process conditions		
Process temperature		-40 ... 80 °C (-40 ... 176 °F)
Medium pressure limits		-1 ... 6 bar
State of aggregation		solids
Solid contents		≤ Ø 30 mm

Connection

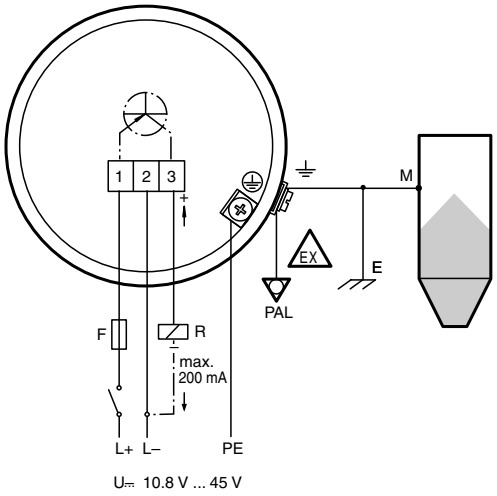

Electronic insert E5

3-wire DC connection

F: fine-wire fuse, 500 mA
R: connected load, e. g. PLC, DCS, relay
M: connection to ground, silo or metal parts silo
E: grounding

The LCL is protected against reverse polarity. In case of mixing up the connections, the green LED does not illuminate "ready to operate".

PE-connection and PAL-connection for LCL1 are unnecessary.

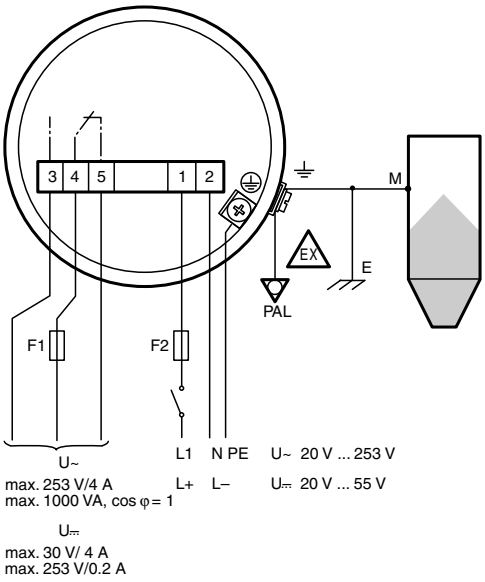

Electronic insert WA

AC/DC connection with relay output

F1: fine-wire fuse for the protection of the relay contact, dependent on the connected load
F2: fine-wire fuse, 500 mA
M: connection to ground, silo or metal parts silo
E: grounding

PE-connection and PAL-connection for LCL1 are unnecessary.
