Evaluation unit

SLVA-4Kplus 24VDC-RI,RM

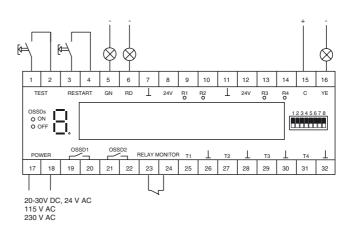

Model Number

SLVA-4Kplus 24VDC-RI,RM

Features

- ٠ Self-monitoring (type 4 according to IEC/EN 61496-1)
- Evaluation device for safety thru-٠ beam sensors SLA, for safety light grids SLP and for 2 channel safety devices (emergency off)
- Operating mode can be selected by ٠ means of DIP switches
- Start/Restart disable •
- Relay monitor
- Pre-fault indication ٠
- Clearly visible LED functional display •
- 7-segment diagnostic display •
- Safety outputs OSSD, external status • displays OSSD

Technical data		
General specifications		
Tests		IEC/EN 61496
Safety type according to IEC/EN 6	1496	4
Marking		CE
Operating mode		Startup/restart disable, relay motor, emergency off
Functional safety related paramet	ters	
Safety Integrity Level (SIL)		SIL 3
Performance level (PL)		PLe
Category		Cat. 4
Mission Time (T _M)		20 a
PFH _d		1.97 E-9
Туре		4
Indicators/operating means		
Diagnostics indicator		7-segment display
Function indicator		LED red: OSSD off
		LED green: OSSD on
		LED yellow 4x: Indicator lamp channel 14
Pre-fault indicator		LED yellow flashing: Indicator lamp channel 1 4
Control elements		8 DIP-switches for selection of operating modes
Electrical specifications		
Operating voltage	UB	24 V DC ± 15 %
No-load supply current	I ₀	220 mA
Power consumption	P ₀	7 VA
Input		
Activation current		approx. 1 mA
Activation time		0.03 1 s
Test input		Reset-input for system test
Function input		Relay monitor, startup enable, input for 2-channel protective device
Output		
Safety output		2 relay outputs, force-guided NO-contact
Signal output		Direct output for LEDs for displaying the switching state of the OSSDs
Switching voltage		20 230 V AC/DC
Switching current		AC: 0.01 2 A DC see diagram of limit load curve
Response time		40 ms
Ambient conditions		
Ambient temperature		0 50 °C (32 122 °F)
Storage temperature		-20 75 °C (-4 167 °F)
Mechanical specifications		
Degree of protection		IP20
Connection		Connection terminals, max. conductor cross-sectional area 1.5 mm ²
Material		
Housing		Polycarbonate/V-0
Mass		900 g
Approvals and certificates		
Approvals		TÜV; cNRTLus

Operating modes

The mode of operation is adjusted according to the description of the item when the unit leaves the factory. The user can change the mode of operation. After changing the mode of operation, before the system is enabled, a test of the effectiveness of the selected setting must always take place.

You can adjust the modes of operation of the SLVA-4Kplus with the DIP switches. The DIP switches are accessible by removing the transparent covering on the upper side of the analyser unit.

Two switches should each be moved into the same position.

Switch	Position	Mode of operation
1 + 5	OFF	Without startup/restart disable (restart)
	ON	With startup/restart disable (restart)
2 + 6	OFF	Without relay monitor (EDM)
	ON	With relay monitor (EDM)
3 + 7	OFF	Optical barriers on channels 3 and 4
	ON	Emergency off on channels 3 and 4
4 + 8	OFF	Emergency off static
	ON	Emergency off pulsed

If the DIP switches are turned on during operation, the analyser unit switches into secure state (outputs turned off) and the 7segment displays shows a P. In addition, output 15/16 flashes (ready for startup).

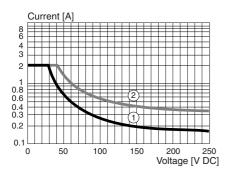

Indicator lamps and 7-segment diagnostic display

The positions of the indicator lamps of the analyser units are illustrated schematically below. The numeric display indicates the operating and error states of the BWS. In the error state, the decimal point of the 7-segment display flashes. The R1-R4 indicator lamps (yellow) display the receiver status of the light barriers or emergency off circuit that are connected. The OSSDs indicator lamp (ON = green, OFF = red) displays the status of the safety outputs.

I FD	Red	OSSD outputs turned off
		•
	Green	
	Yellow	
		On = lightbeam free or emergency off circuit on
		Flashing = light beam free, minimum function reserve not met
		Off = light beam interrupted or emergency off circuit turned off
7-segment display		Protective field free, OSSD on (running light)
		Protective field interrupted
	Ξ	Protective field free, OSSD off, ready for startup
	Ξ	System error
		DIP switch setting incorrect
		Short circuit in transmitter connection
		Error in simultaneity condition for emergency off channel
	Ξ	Error in an external relay
	Ξ	DIP switches are turned on

Diagrams

Load limit curve of relay OSSD for DC-current

1) inductive load, L/R = 40 ms 2) ohmic load
