

Metal code bar

PGV000001M-CAMG30x500-000175

- High temperature resistance
- High mechanical stability
- Easily exchangeable
- Chemically highly resistant

DataMatrix metal code bars for positioning PGV read heads

Function

Rugged Data Matrix metal code bars made of anodized aluminum for use on the ground in camera-based track guidance. Depending on the application, the code bars can be glued directly to the floor, or glued into special carrier profile rails. The code bars are available in modular lengths of 100, 200, and 500 mm.

Dimensions

Technical Data

| General specifications | |
|---------------------------|---|
| Total length | 1 m |
| Start position | 175 mm |
| Code bar segment | |
| Nominal segment length | 500 mm |
| Width | 30 mm |
| Ambient conditions | |
| Operating temperature | -40 ... 80 °C (-40 ... 176 °F) |
| Installation temperature | 10 ... 40 °C (50 ... 104 °F) |
| Environmental resistance | UV radiation Humidity |
| Chemical resistance | Oils Grease Fuels Aliphatic solvents Weak acids |
| Mechanical specifications | |
| Material thickness | 1 mm |
| Material | Aluminum |
| Mounting type | adhesive |
| Mass | 83 g / m |

Mounting

Preparing the Base Surface

1. Use clean cleaning cloths (free from lint and plasticizers) to clean the surfaces.
2. Use cleaning agents appropriate for the level of surface contamination, for example n-Heptane, ethanol, or a 50:50 mixture of isopropanol and water.
3. Clean the surface until it is completely dry and free of dust, oil, oxides, release agents, and other contaminants.
4. Ensure that the surface is dry, clean, and stable.

Adhesive Strength

| Metal | Material with high-energy surfaces | Material with low-energy surfaces |
|------------|------------------------------------|-----------------------------------|
| 33 N/25 mm | 32 N/25 mm | 31 N/25 mm |

Material thickness: 1 mm code bar + 0.13 mm adhesive

Processing Instructions

During bonding, the pressure should be as high as possible, and the temperature should be at least +10 °C. The higher the pressure and temperature, the better the adhesive will penetrate the pores of the base surface. This allows higher adhesive strength values to be achieved. It takes approx. 72 hours for the adhesive to cure.
