Function

The function of the termination board and the system connector pin assignment is exactly fitted to the requirements of the Triconex Tricon CX system. The signal is output to the safety instrumented system via the system connector and additionally via screw terminals (signal splitter function). Information about missing supply voltage of the isolated barriers is available for the system at the volt-free transistor output. Wiring faults from the field side will be reported via the volt-free transistor output, if this function is supported by the isolators. The termination board has a robust glass fiber reinforced plastic housing. The termination board is mounted in the switch cabinet on a 35 mm DIN mounting rail according to EN 60175.
